- **Improved regional air quality:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will improve regional air quality which will improve health conditions for local and regional residents.
- **Reduced greenhouse gas emissions:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will reduce greenhouse gas emissions which will help to reduce the effects of climate change over time.

The offsetting value of these project benefits relative to the residual DHAEs noted above for the Gilroy community was evaluated as follows:

- **Construction Bus Transit Delays/Operational Traffic:** The increased travel options, transit connectivity, and regional vehicle miles travelled with the project are considered to offset both the temporary adverse bus transit delays during construction with Alternative 2 and the operational traffic delays with Alternatives 2 and 4. The long-term benefit of introducing a substantial new travel option and investment in alternatives to passenger vehicle travel is considered to offset both the temporary bus transit delays and the localized operational traffic delays in this community area.
- **Business Displacements:** The increased construction and operational spending and employment is considered to adequately offset the economic and employment effects of business displacements with Alternatives 1, 2, and 4 that may not be able to relocate in the immediate vicinity.
- **Aesthetics and Visual Quality/Operational Noise:** While the project would reduce adverse visual effects and noise effects associated with airport and highway expansion, this would not fully offset the adverse visual effects for Alternatives 1, 2, and 3 or the adverse noise effects with Alternatives 2 and 4 in this community area.
- **Parks:** There are no project benefits that would offset the DHAEs related to residential displacement or parks with Alternative 2 in this community area.

The Authority has identified the following community improvements:

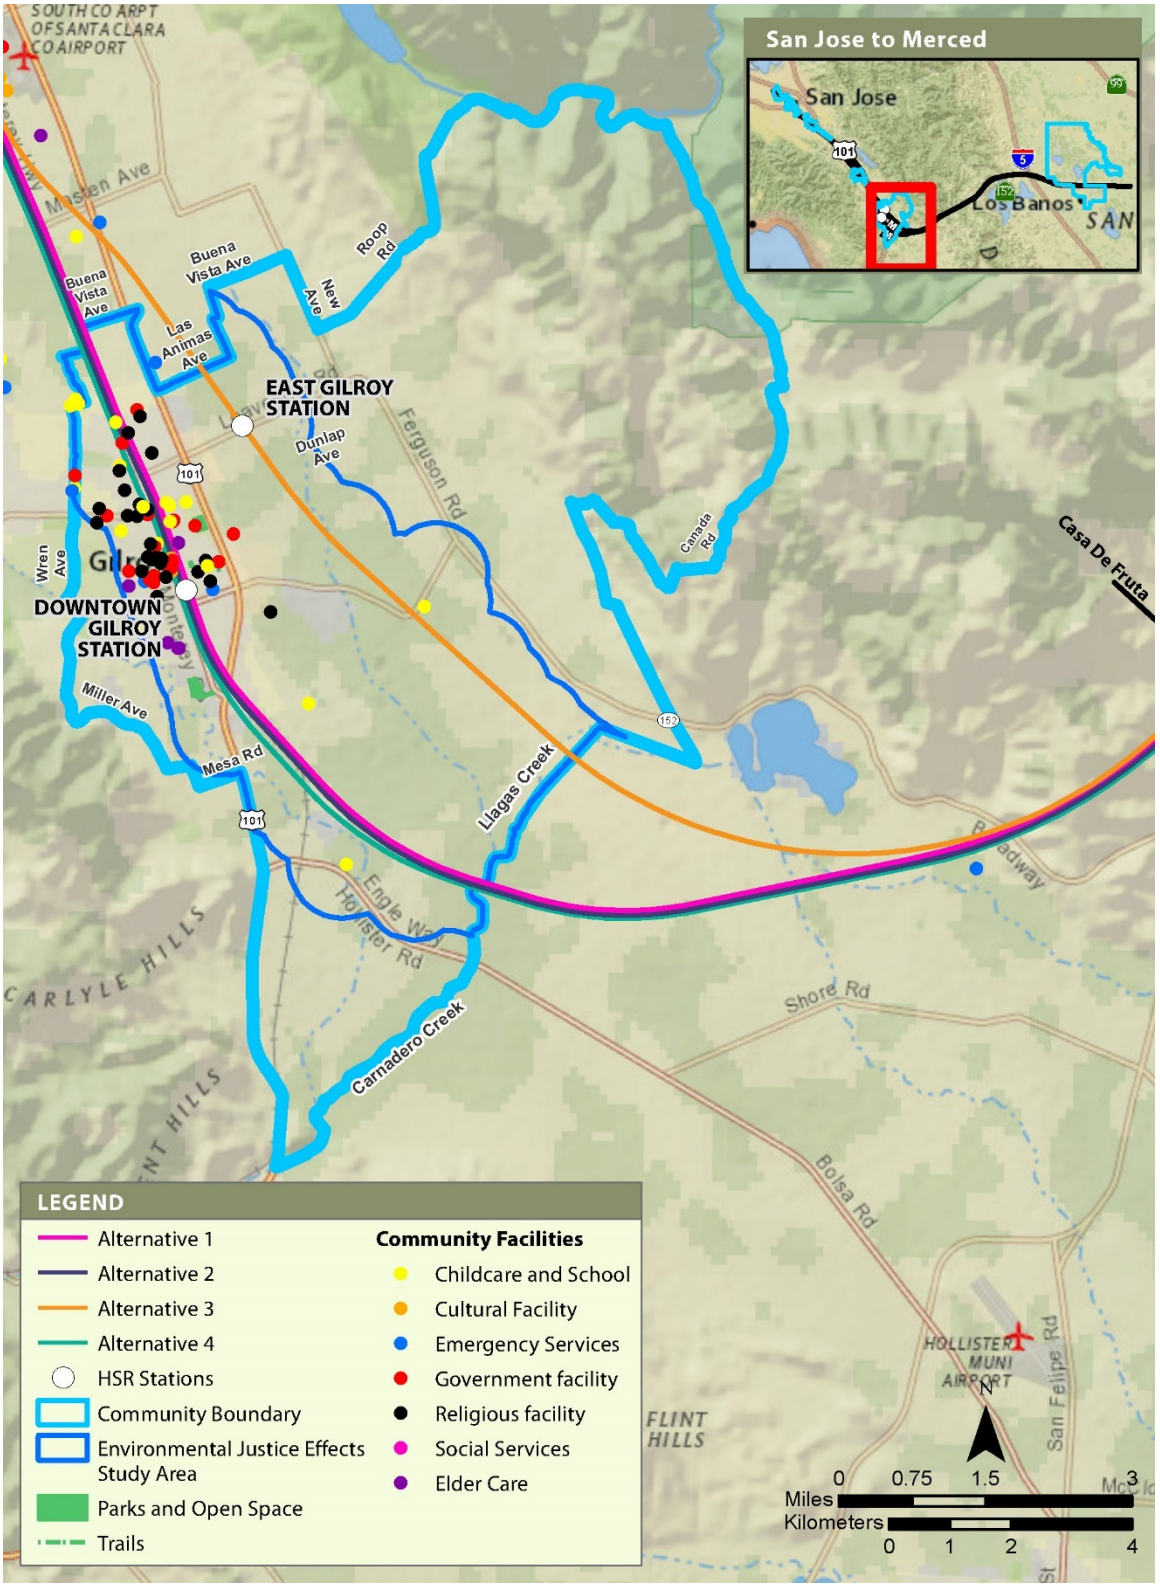
- **Alternatives 1, 2, and 4:** The Authority would install noise insulation certain residences and/or sound walls adjacent to the west side of US 101 from south of Las Animas Avenue to Leavesley Road, from Adams Court to San Ysidro Park, and from San Ysidro Park to north of East 7th Street to reduce noise from existing highway traffic. This measure would reduce community noise effects sufficient to offset the adverse noise effects with Alternatives 1, 2 and 4 in this community area.

- **Alternative 4:** The Authority would provide funding to the City of Gilroy to implement a series of investments in community safety in Gilroy, including a new pedestrian/bicycle overcrossing of the railroad at IOOF Avenue, bikeway improvements (along IOOF Ave., Monterey Road, 6th Street, 4th Street, and Alexander Street), sidewalk gap closure along Murray Avenue, and neighborhood street lighting and sidewalk and curb improvements within the Gilroy Neighborhood Revitalization Strategy Area (nominally along the high-speed rail alignment between Las Animas Ave. on the north and US 101 on the south) that, in combination with project mitigation and project safety investments, would offset the DHAEs related to emergency vehicle response times in this community area.
- **Alternative 2:**
  - The Authority would provide funding to the Gilroy Unified School District to provide recreational amenities for the South Valley Middle School. While this measure will help to provide recreational opportunities for students and the neighboring community, it is not considered sufficient to offset the DHAE related to the loss of use of a portion of the field and track at the school.
  - The Authority, in partnership with affordable housing supportive agencies and organizations, would partially fund affordable housing development at 50% of full cost of 75 new units, which corresponds to the estimated number of residential units that could not be relocated locally in Gilroy with Alternative 2. This measure, in addition to state and federal required relocation assistance and direct mitigation to help affected displaced residents, is considered adequate to offset the residential DHAEs with Alternative 2 in this community area.

No community improvements have been identified that could offset the aesthetics and visual effects relative to the aerial viaduct or elevated embankment relative to Alternatives 1, 2, and 3 in this community area.

Preliminary Conclusion

After consideration of direct mitigation, project benefits and potential community improvements, there would potentially remain disproportionately high and adverse effects with Alternatives 1, 2 and 3 due to the aerial viaduct or elevated embankment and with Alternative 2 related to the loss of a portion of the field and track at South Valley Middle School. After consideration of direct mitigation, project benefits and potential community improvements, there would potentially be no disproportionately high and adverse effects with Alternative 4 in the Gilroy community area.



Gilroy Community Area

Environmental Justice Analysis: San Jose to Merced (as of July 2021)

MORGAN HILL

The EIR/EIS for the San Jose to Merced project section evaluates effects on communities along the project alignment. Where adverse effects are identified, the Authority considers ways to mitigate these effects. The information provided below is preliminary as the Authority seeks community input to advance our environmental review. The Authority's conclusions will be included in the Final EIR/EIS for the project section after consideration of feedback through this round of outreach. After direct mitigation(meaning measures that avoid, minimize, or directly compensate for an adverse impact), the Authority evaluated the remaining effects for the entire project section (from Santa Clara to the Central Valley) to determine if there would be disproportionately high and adverse effects (DHAEs) to minority and/or low-income populations overall. Although there may be DHAEs based on analysis of the entire project section, DHAEs may not necessarily be found in each community along the alignment. The table below shows the outcomes of the EIR/EIS analysis in the Morgan Hill community area before consideration of project benefits or community improvements.

Summary of Potential Effects
Morgan Hill

Effects	Alternatives			
	1	2	3	4
Aesthetics and Visual Quality	●	●	●	○
Residential Displacements	◎	●	◎	
Business Displacements		●		◎
Emergency Response Delays [1]				◎
Parks [2]	○	◎	○	◎
Operational Noise Effects	○	○	○	●
Operational Vibration	○	○	○	◎
Construction Traffic/Bus Transit Delay [3]	○	●	○	○
Operational Traffic		○		●

● Potential disproportionately high and adverse effects (DHAE).

◎ Potential Effects *not* DHAE for the entire project section, but a particular community may still be affected.

○ Potential Effects not considered high and adverse.

The EIR/EIS identifies other effects (beyond the nine shown above), none of which would have a DHAE on minority and/or low-income populations. All effects are important regardless of whether they have a DHAE or not.

[1] Emergency Response Delay > 30 seconds occurs near E. Middle Avenue east of the railroad corridor, but the affected area is not disproportionately minority or low-income.[2] Morgan Hill Community and Cultural Center– construction disruption of amphitheater use. Villa Mira Monte– construction disruption of outdoor special event use. [3] Bus transit delays during construction.

MORGAN HILL (p. 2)

As shown in the table above, in the Morgan Hill community area, with direct mitigation, there would be the following residual DHAEs:

- **Aesthetics and Visual Quality:** The adverse visual effects for Alternatives 1, 2, and 3 are related to either the aerial viaduct (Alternative 1 and 3) or the elevated embankment (Alternative 2), which will be observable to residents along the high-speed rail alignment.
- **Residential/Business Displacements:** The adverse residential and business displacement effects for Alternative 2 would occur because there is inadequate relocation availability in Morgan Hill to absorb the amount of displacements that would occur with this alternative.
- **Operational Noise/Operational Traffic:** The adverse operational noise and traffic effects with Alternative 4 are related to at-grade train operations.
- **Construction Bus Transit Delays:** The adverse bus transit delays during construction with Alternative 2 would occur on a temporary basis due to roadway modifications when there is a requirement for closure or partial closure of roadways.

Consideration of Project Benefits and Community improvements

The project will have a wide range of benefits to both general populations in the project area and also to minority and low-income populations along the project alignments including the following:

- **Regional and intrastate travel options**: The high-speed rail project will provide a fast and efficient connection from San Jose and Gilroy to San Francisco, the Central Valley, and Southern California. Travel by high-speed rail is safer and faster than travel by personal vehicle.
- **Increased transit connectivity:** The high-speed rail service will be connected to other transit services in San Jose and Gilroy (and at other system stations) that allow travelers to take full advantage of transit connections. For example, between Santa Clara and Gilroy, riders can use Caltrain to connect to and from high-speed rail service from their local Caltrain stations.
- **Reduction of vehicle miles travelled on regional roadways**: The high-speed rail project will divert cars from regional highways such as I-880, US 101, I-280, SR87, SR85, and SR 152 which will benefit local residents who travel along these roadways.
- **Reduced need for expanding airports and highways:** By providing an alternative to long-distance passenger vehicle and airplane travel, the project will reduce the need to expand existing airports and highways which would otherwise affect residents adjacent to such facilities who would be affected by expansion, traffic increases, noise, and other effects.
- **Construction and operational spending and employment:** The high-speed rail project will provide jobs during construction and operation as well as spending locally on materials and supplies which will provide employment opportunities for local residents and economic welfare of local areas.

- **Improved regional air quality:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will improve regional air quality which will improve health conditions for local and regional residents.
- **Reduced greenhouse gas emissions:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will reduce greenhouse gas emissions which will help to reduce the effects of climate change over time.

The offsetting value of these project benefits relative to the residual DHAEs noted above for the Morgan Hill community was evaluated as follows:

- **Construction Bus Transit Delays/Operational Traffic:** The increased travel options, transit connectivity, and regional vehicle miles travelled with the project are considered to offset both the temporary adverse bus transit delays during construction with Alternative 2 and the operational traffic delays with Alternative 4. The long-term benefit of introducing a substantial new travel option and investment in alternatives to passenger vehicle travel is considered to offset both the temporary bus transit delays and the localized operational traffic delays.
- **Business Displacements:** The increased construction and operational spending and employment is considered to adequately offset the economic and employment effects of business displacements with Alternative 2 that may not be able to relocate in the immediate vicinity.
- **Aesthetics and Visual Quality/ Operational Noise:** While the project would reduce adverse visual effects and noise effects associated with airport and highway expansion, this would not fully offset the adverse visual effects for Alternatives 1, 2, and 3 or the adverse noise effects with Alternative 4 in this community area.

There are no project benefits that would offset the DHAEs relative to residential displacement effects with Alternative 2 in this community area.

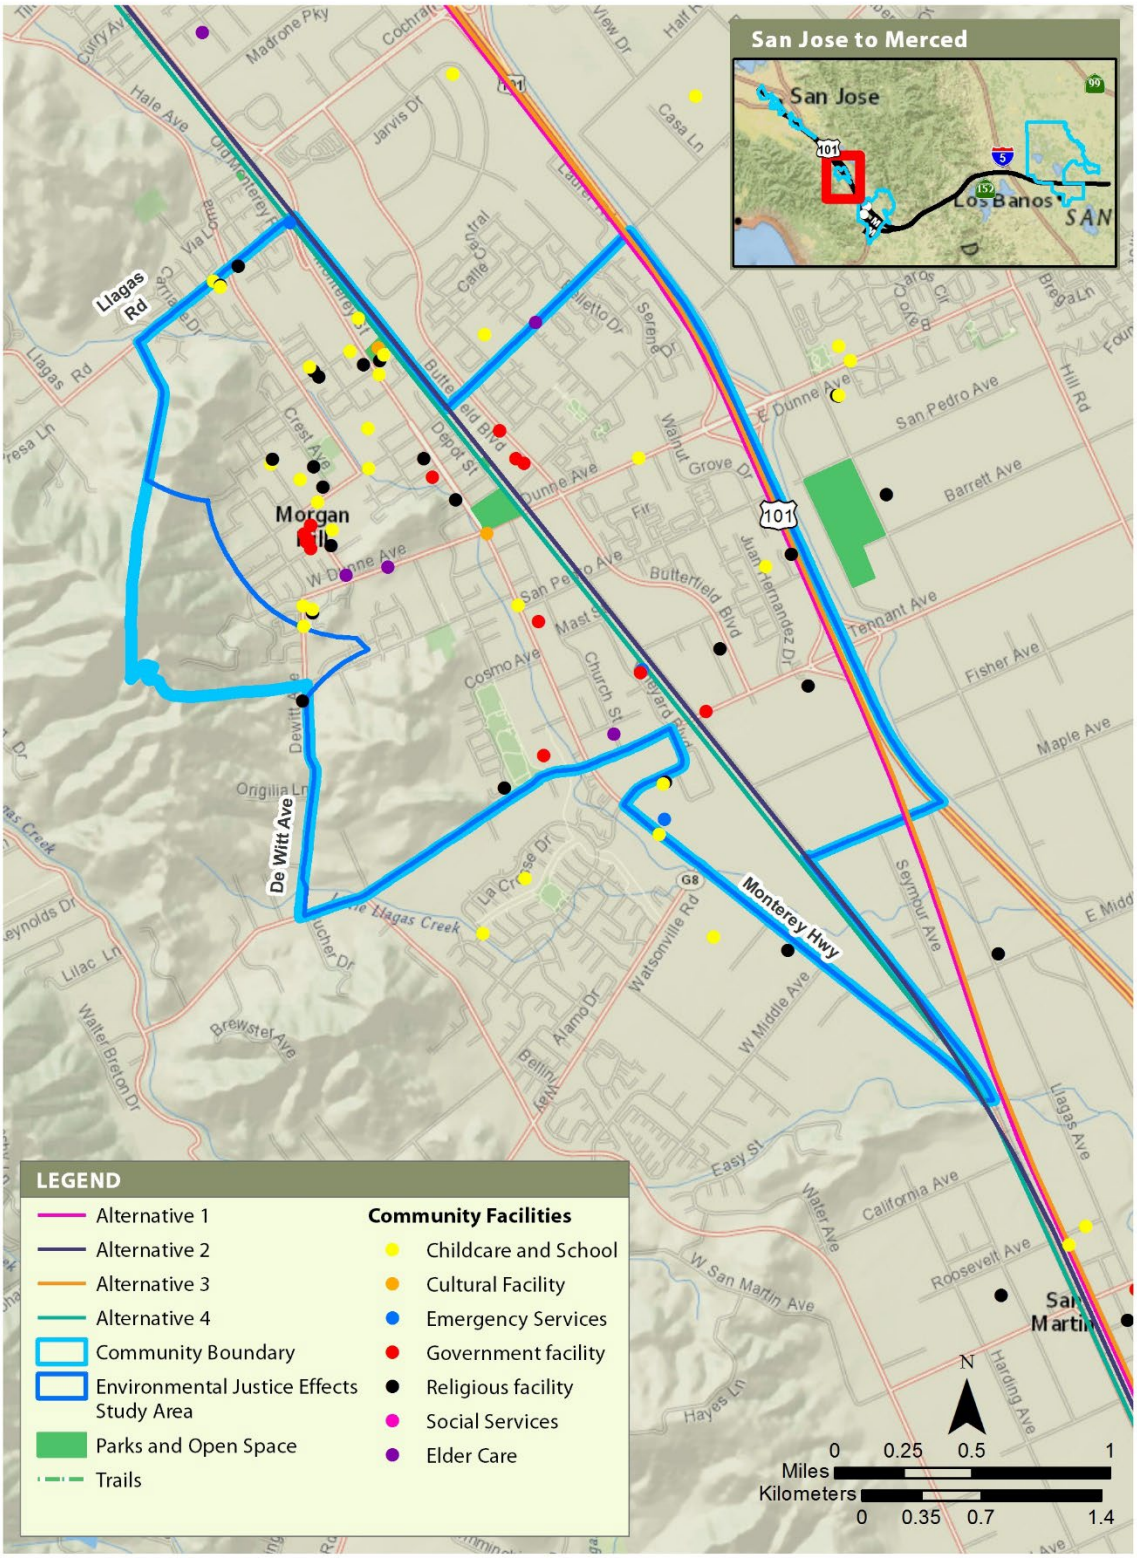
The Authority has identified the following community improvements:

- **Alternatives 1 and 3:** The Authority would provide funding to the City of Morgan Hill to implement trail and park improvements between Cochrane Road and Tennant Road under the proposed viaduct with Alternatives 1 and 3 to improve visual aesthetics. While this measure will help improve community aesthetics, it is not considered sufficient to offset the DHAEs of the aerial viaduct with Alternatives 1 and 3 in this community area.
- **Alternative 2:**
  - The Authority would provide funding to the City of Morgan Hill to implement Railroad Avenue Complete Streets improvements to improve both visual aesthetics and safety for local residents relative to Alternative 2. While this measure will help improve community aesthetics, it is not considered sufficient to offset the DHAEs of the elevated embankment with Alternative 2 in this community area.
  - The Authority would provide funding to affordable housing supportive agencies and organizations to construct affordable housing at 50% of full cost of 59 new units, which corresponds to the estimated number of residential units that could not be relocated locally in Morgan Hill with Alternative 2. This measure, in addition to state and federal required relocation assistance and direct mitigation to help affected displaced residents, is considered adequate to offset the residential displacement DHAEs with Alternative 2 in this community area.

- **Alternative 4:** The Authority would install noise insulation for existing residents along the west side of US 101 between approximately 0.35 mile north of East Main Avenue to Diana Avenue and from San Pedro Avenue to Barret Avenue where noise barriers do not already exist to reduce noise effects from existing highway traffic with Alternative 4. This measure would reduce community noise effects sufficient to offset the adverse noise effects with Alternative 4 in this community area.

Preliminary Conclusion

After consideration of direct mitigation, project benefits and potential community improvements, there would potentially remain disproportionately high and adverse effects with Alternatives 1, 2 and 3 due to the aerial viaduct or elevated embankment. After consideration of direct mitigation, project benefits and potential community improvements, there would potentially be no disproportionately high and adverse effects with Alternative 4 in the Morgan Hill community area.



Morgan Hill Community Area

Environmental Justice Analysis: San Jose to Merced (as of July 2021)

SAN JOAQUIN VALLEY

The EIR/EIS for the San Jose to Merced project section evaluates effects on communities along the project alignment. Where adverse effects are identified, the Authority considers ways to mitigate these effects. The information provided below is preliminary as the Authority seeks community input to advance our environmental review. The Authority's conclusions will be included in the Final EIR/EIS for the project section after consideration of feedback through this round of outreach. After direct mitigation(meaning measures that avoid, minimize, or directly compensate for an adverse impact), the Authority evaluated the remaining effects for the entire project section (from Santa Clara to the Central Valley) to determine if there would be disproportionately high and adverse effects (DHAEs) to minority and/or low-income populations overall. Although there may be DHAEs based on analysis of the entire project section, DHAEs may not necessarily be found in each community along the alignment. The table below shows the outcomes of the EIR/EIS analysis in the San Joaquin Valley community area before consideration of project benefits or community improvements.

Summary of Potential Effects
San Joaquin Valley

Effects	Alternatives			
	1	2	3	4
Aesthetics and Visual Quality	●	●	●	○
Residential Displacements	○	○	○	○
Business Displacements	○	○	○	○
Emergency Response Delays [1]				
Parks [1]				
Operational Noise Effects	●	●	●	●
Operational Vibration	○	○	○	○
Construction Traffic/Bus Transit Delay [1]				
Operational Traffic [1]				

● Potential disproportionately high and adverse effects (DHAE).

○ Potential Effects *not* DHAE for the entire project section, but a particular community may still be affected.

○ Potential Effects not considered high and adverse.

The EIR/EIS identifies other effects (beyond the nine shown above), none of which would have a DHAE on minority and/or low-income populations. All effects are important regardless of whether they have a DHAE or not.

[1] *No high and adverse effects to emergency response times, parks, construction traffic, bus transit, or operational traffic expected.*

SAN JOAQUIN VALLEY (p. 2)

As shown in the table above, in the San Joaquin Valley community area, with direct mitigation, there would be the following residual DHAEs:

- The adverse visual effects for Alternatives 1, 2, and 3 are related to the aerial viaduct.[1]
- The adverse operational noise effects with all alternatives are related to train operations.

Consideration of Project Benefits and Potential Community Improvements

The project will have a wide range of benefits to both general populations in the project area and also to minority and low-income populations along the project alignments including the following:

- **Regional and intrastate travel options**: The high-speed rail project will provide a fast and efficient connection from San Jose and Gilroy to San Francisco, the Central Valley, and Southern California. Travel by high-speed rail is safer and faster than travel by personal vehicle.
- **Increased transit connectivity:** The high-speed rail service will be connected to other transit services in San Jose and Gilroy (and at other system stations) that allow travelers to take full advantage of transit connections. For example, between Santa Clara and Gilroy, riders can use Caltrain to connect to and from high-speed rail service from their local Caltrain stations.
- **Reduction of vehicle miles travelled on regional roadways**: The high-speed rail project will divert cars from regional highways such as I-880, US 101, I-280, SR87, SR85, and SR 152 which will benefit local residents who travel along these roadways.
- **Reduced need for expanding airports and highways:** By providing an alternative to long-distance passenger vehicle and airplane travel, the project will reduce the need to expand existing airports and highways which would otherwise affect residents adjacent to such facilities who would be affected by expansion, traffic increases, noise, and other effects.
- **Construction and operational spending and employment:** The high-speed rail project will provide jobs during construction and operation as well as spending locally on materials and supplies which will provide employment opportunities for local residents and economic welfare of local areas.
- **Improved regional air quality:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will improve regional air quality which will improve health conditions for local and regional residents.
- **Reduced greenhouse gas emissions:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will reduce greenhouse gas emissions which will help to reduce the effects of climate change over time.

[1] Note that although Alternative 4 would have the same design at the other alternatives, for the entire project section, Alternative 4 would not have a DHAE relative to visual aesthetics.

The offsetting value of these project benefits relative to the residual DHAEs noted above for the San Joaquin Valley community was evaluated as follows:

- **Aesthetics and Visual Quality/Operational Noise:** While the project would reduce adverse visual effects and noise effects associated with airport and highway expansion, this would not offset the adverse visual effects for Alternatives 1, 2, and 3 or the adverse noise effects with all alternatives because the benefits of reducing airport and highway expansion would occur in other community areas.

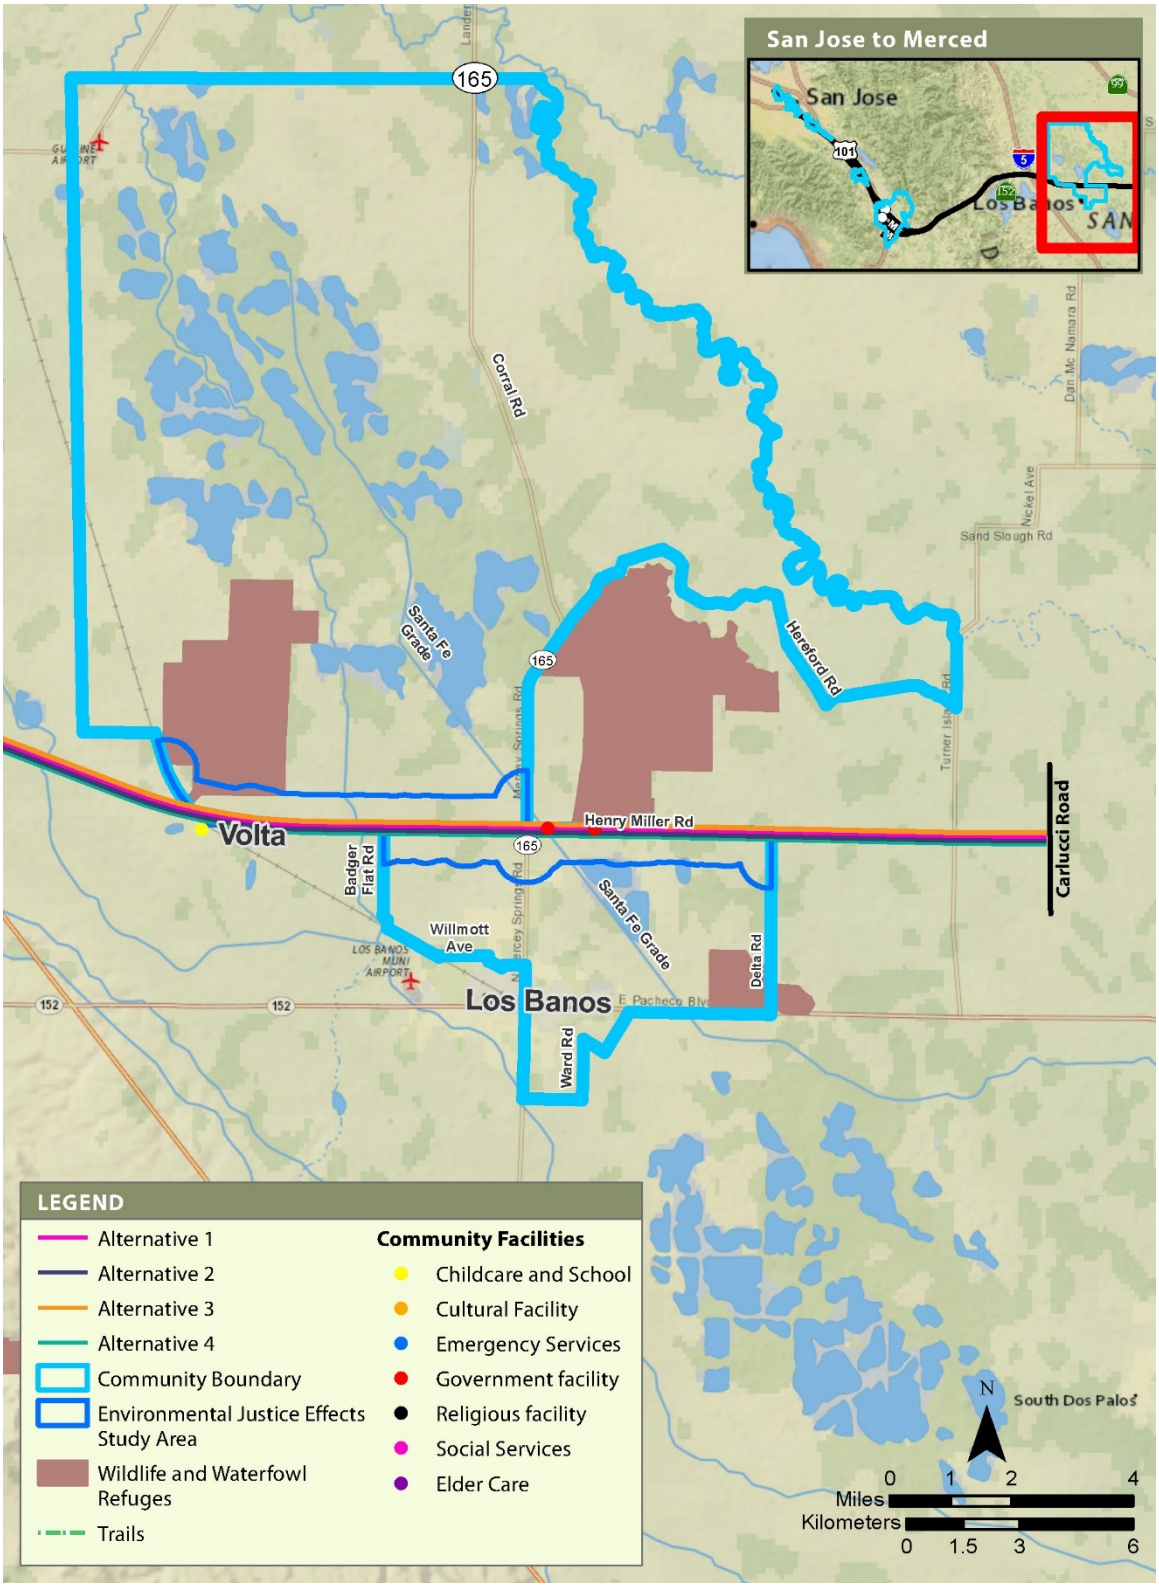
The Authority has identified the following community improvements

- All Alternatives:
    - The Authority would provide funding to the Los Banos Unified School District to provide a series of enhancements to the Volta Elementary School including improved windows and facilities which can help reduce noise levels for students, faculty, and community users of school facilities. The proposed community improvement would benefit minority and low-income residents and community members who are served by Volta Elementary School by providing enhanced education facilities and community-serving site facilities. Health, safety, educational, and recreational benefits would be provided through the provision of enhanced utilities, safety improvements, and improved educational and recreational space.
    - The Authority would provide funding to the Los Banos Unified School District and/or Merced County to support the acquisition and construction of a new community park adjacent to the Volta School that could be used for recreation by the school as well. This proposed improvement would benefit minority and low-income residents by providing additional recreational opportunities for Volta Elementary School students and for the surrounding community. The property is located between the Volta community and the elementary school, so would also provide a safe route to school for student from the community.

These community improvements, in combination with direct mitigation, project benefits, are considered sufficient to offset the adverse noise effects (for all alternatives), but not the DHAEs of the aerial viaduct with Alternatives 1, 2 and 3. Although Alternative 4 would have the same alignment design as the other Alternatives in the San Joaquin Valley subsection, for the entire project section, Alternative 4 would not have a DHAE on minority populations or low-income populations in this community area.

Preliminary Conclusion

After consideration of direct mitigation, project benefits and potential community improvements, there would potentially remain disproportionately high and adverse effects with Alternatives 1, 2 and 3 due to the aerial viaduct. After consideration of direct mitigation, project benefits and potential community improvements, there would potentially be no disproportionately high and adverse effects on minority populations or low-income populations with Alternative 4 in the San Joaquin Valley community area.



San Joaquin Valley Community Area

Environmental Justice Analysis: San Jose to Merced (as of July 2021)

SANTA CLARA/NORTH SAN JOSE

The EIR/EIS for the San Jose to Merced project section evaluates effects on communities along the project alignment. Where adverse effects are identified, the Authority considers ways to mitigate these effects. The information provided below is preliminary as the Authority seeks community input to advance our environmental review. The Authority's conclusions will be included in the Final EIR/EIS for the project section after consideration of feedback through this round of outreach. After direct mitigation(meaning measures that avoid, minimize, or directly compensate for an adverse impact), the Authority evaluated the remaining effects for the entire project section (from Santa Clara to the Central Valley) to determine if there would be disproportionately high and adverse effects (DHAEs) to minority and/or low-income populations overall. Although there may be DHAEs based on analysis of the entire project section, DHAEs may not necessarily be found in each community along the alignment. The table below shows the outcomes of the EIR/EIS analysis in the Santa Clara/North San Jose community area before consideration of project benefits or community improvements.

Summary of Potential Effects
Santa Clara/North San Jose

Effects	Alternatives			
	1	2	3	4
Aesthetics and Visual Quality	○	●	●	○
Residential Displacements		◎	◎	
Business Displacements	◎	◎	◎	◎
Emergency Response Delays [1]				
Parks [2]		○	○	
Operational Noise Effects	○	○	○	●
Operational Vibration	○	○	○	◎
Construction Traffic and/or Bus Transit Delay [3]	○	●	●	○
Operational Traffic [4]				

● Potential disproportionately high and adverse effect (DHAE).

◎ Potential Effects *not* DHAE for the entire project section, but a particular community may still be affected.

○ Potential Effects not considered high and adverse.

The EIR/EIS identifies other effects (beyond the nine in this table), none of which would have a DHAE on minority and/or low-income populations. All effects are important regardless of whether they have a DHAE or not.

[1]No stations and no at-grade crossings, so no emergency response delays. [2]Limited partial acquisitions at Reed Street Dog Park and Reed and Grant Streets Sports Park. [3] Bus transit delays due to construction of crossover at De la Cruz Blvd. [4] No at-grade crossings or stations in community, so no operational traffic effects.

SANTA CLARA/NORTH SAN JOSE (p. 2)

As shown in the table above, in the Santa Clara/North San Jose community area, with direct mitigation, there would be the following residual DHAEs:

- **Aesthetics and Visual Quality**: The high-speed rail alignment for Alternatives 2 and 3 includes an aerial viaduct in this community, which will be observable to residents.
- **Construction Bus Transit Delay**: Bus transit delays during construction with Alternatives 2 and 3 would occur on a temporary basis due to the construction of overpasses when there is a requirement for closure or partial closure of roadways.
- **Operational Noise**: The adverse operational noise effects with Alternative 4 are limited to one location, a multifamily residence along the Caltrain Corridor north of the Santa Clara Caltrain Station.

Consideration of Project Benefits and Potential Community Improvements

The project will have a wide range of benefits to both general populations in the project area and also to minority and low-income populations along the project alignments including the following:

- **Regional and intrastate travel options**: The high-speed rail project will provide a fast and efficient connection from San Jose and Gilroy to San Francisco, the Central Valley, and Southern California. Travel by high-speed rail is safer and faster than travel by personal vehicle.
- **Increased transit connectivity:** The high-speed rail service will be connected to other transit services in San Jose and Gilroy (and at other system stations) that allow travelers to take full advantage of transit connections. For example, between Santa Clara and Gilroy, riders can use Caltrain to connect to and from high-speed rail service from their local Caltrain stations.
- **Reduction of vehicle miles travelled on regional roadways**: The high-speed rail project will divert cars from regional highways such as I-880, US 101, I-280, SR87, SR85, and SR 152 which will benefit local residents who travel along these roadways.
- **Reduced need for expanding airports and highways:** By providing an alternative to long-distance passenger vehicle and airplane travel, the project will reduce the need to expand existing airports and highways which would otherwise affect residents adjacent to such facilities who would be affected by expansion, traffic increases, noise, and other effects.
- **Construction and operational spending and employment:** The high-speed rail project will provide jobs during construction and operation as well as spending locally on materials and supplies which will provide employment opportunities for local residents and economic welfare of local areas.
- **Improved regional air quality:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will improve regional air quality which will improve health conditions for local and regional residents.
- **Reduced greenhouse gas emissions:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will reduce greenhouse gas emissions which will help to reduce the effects of climate change over time.

The offsetting value of these project benefits relative to the residual DHAEs noted above for the Santa Clara/North San Jose community was evaluated as follows:

- **Construction Bus Transit Delay**: The increased travel options, transit connectivity, and reduced regional vehicle miles travelled with the project are considered to offset the temporary adverse bus transit delays during construction with Alternatives 2 and 3.
- **Aesthetics and Visual Quality**: While the project would reduce adverse visual effects and noise effects associated with airport and highway expansion, this would not fully offset the adverse visual effects for Alternatives 1 and 2 or the adverse noise effects with Alternative 4 in this community.

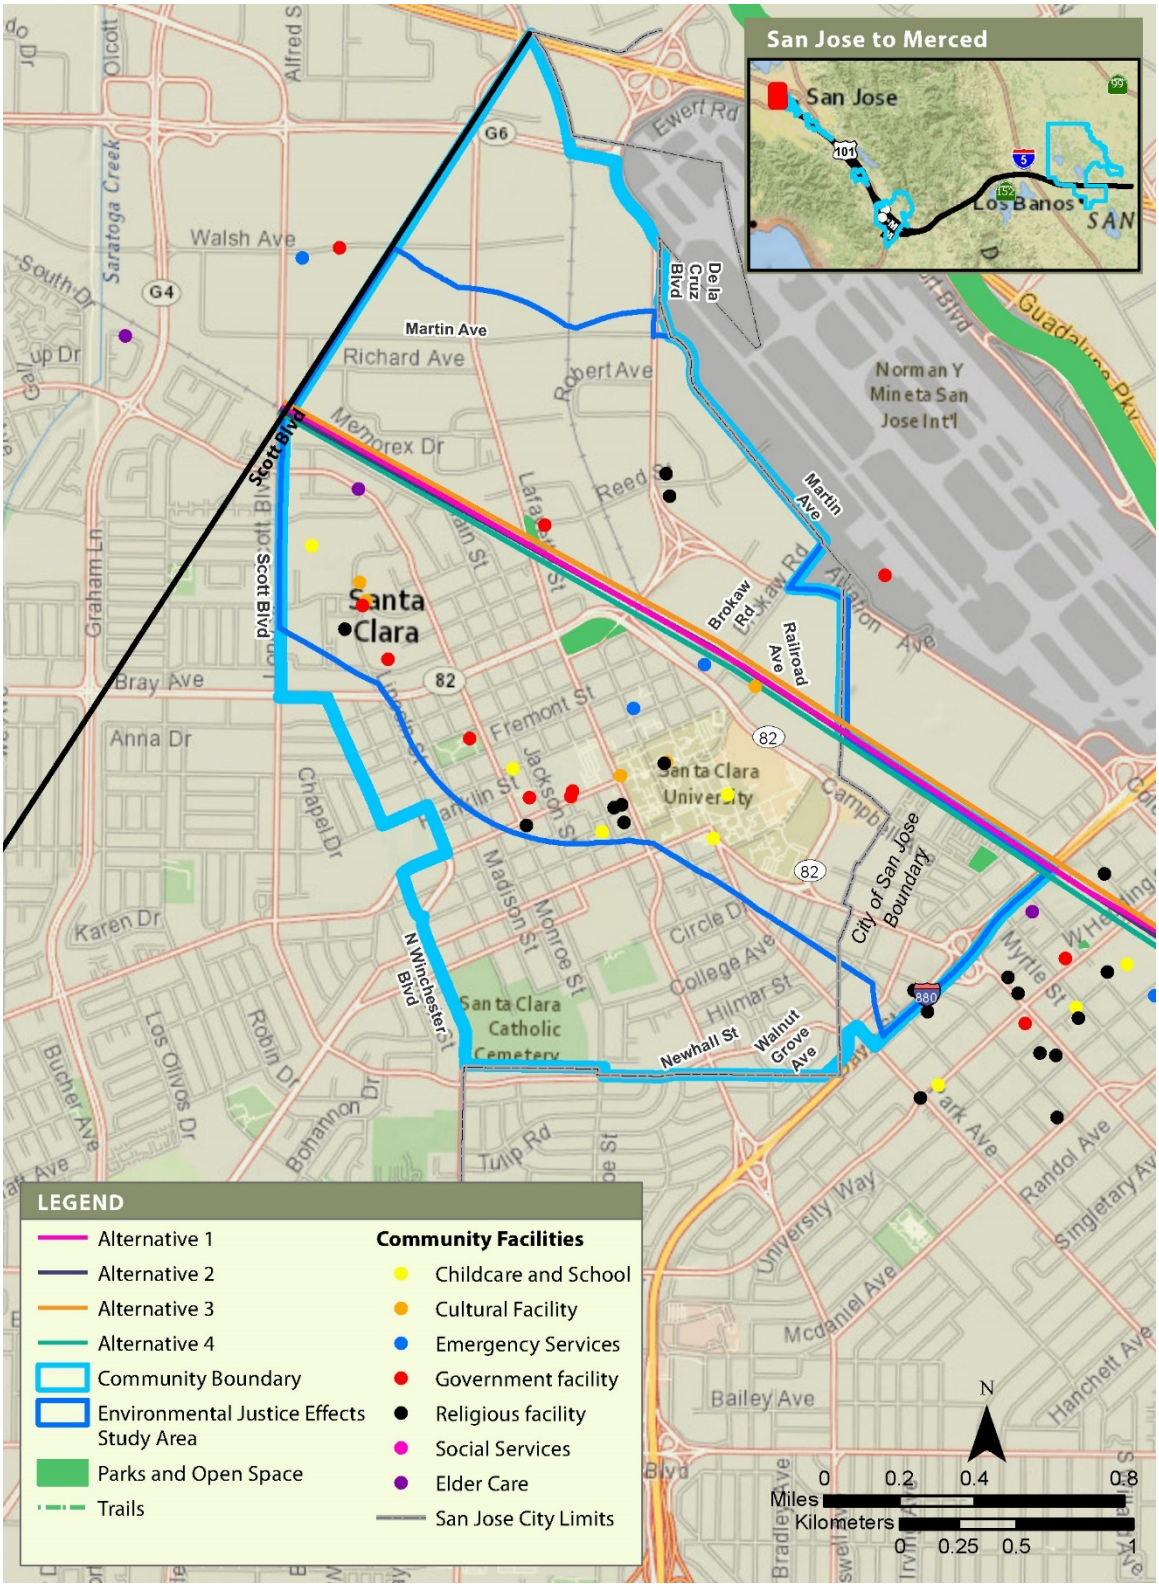
The Authority has identified the following potential community improvements:

- **Alternative 4:** The Authority would install noise insulation for up to 10 existing residences along the Caltrain Corridor between the Santa Clara Caltrain Station and I-880 to reduce noise effects from existing train traffic. This measure would reduce community noise effects sufficient to offset the adverse noise effects with Alternative 4 in this community area.

No feasible community improvements were identified to reduce the DHAE of the aerial viaduct with Alternatives 2 and 3.

Preliminary Conclusion

After consideration of direct mitigation, project benefits and potential community improvements, there would potentially remain disproportionately high and adverse effects with Alternatives 2 and 3 due to the aerial viaduct. After consideration of direct mitigation, project benefits and potential community improvements, there would potentially be no disproportionately high and adverse effects in this Santa Clara/North San Jose with Alternatives 1 and 4.



Santa Clara/North San Jose Community Area

Environmental Justice Analysis: San Jose to Merced (as of July 2021)

SAN JOSE DIRIDON

The EIR/EIS for the San Jose to Merced project section evaluates effects on communities along the project alignment. Where adverse effects are identified, the Authority considers ways to mitigate these effects. The information provided below is preliminary as the Authority seeks community input to advance our environmental review. The Authority's conclusions will be included in the Final EIR/EIS for the project section after consideration of feedback through this round of outreach. After direct mitigation(meaning measures that avoid, minimize, or directly compensate for an adverse impact), the Authority evaluated the remaining effects for the entire project section (from Santa Clara to the Central Valley) to determine if there would be disproportionately high and adverse effects (DHAEs) to minority and/or low-income populations overall. Although there may be DHAEs based on analysis of the entire project section, DHAEs may not necessarily be found in each community along the alignment. The table below shows the outcomes of the EIR/EIS analysis in the San Jose Diridon community area before consideration of project benefits or community improvements.

Summary of Potential Effects
San Jose Diridon

Effects	Alternatives			
	1	2	3	4
Aesthetics and Visual Quality	●	●	●	○
Residential Displacements	○	○	○	○
Business Displacements	○	○	○	○
Emergency Response Delays [1]	○	○	○	○
Parks	○	○	○	○
Operational Noise Effects	○	○	○	●
Operational Vibration [1]	○	○	○	○
Construction Traffic/Bus Transit Delay [2]	●	●	●	○
Operational Traffic	●	●	●	●

● Potential disproportionately high and adverse effects (DHAE).

○ Potential Effects *not* DHAE for the entire project section, but a particular community may still be affected.

○ Potential Effects not considered high and adverse.

The EIR/EIS identifies other effects (beyond the nine shown above), none of which would have a DHAE on minority and/or low-income populations. All effects are important regardless of whether they have a DHAE or not.

[1] No expected adverse vibration effects after mitigation. [2] Bus transit delays due to viaduct construction.

SAN JOSE DIRIDON (p. 2)

As shown in the table above, in the San Jose Diridon community area, with direct mitigation, there would be the following residual DHAEs:

- **Aesthetics and Visual Quality**: The adverse visual effects for Alternatives 1, 2, and 3 are related to the aerial viaduct, which will be observable to residents along the high-speed rail alignment.
- **Operational Noise**: The adverse operational noise effects with Alternative 4 are related to at-grade train operations.
- **Construction Bus Transit Delay**: The adverse bus transit delays during construction with Alternatives 1, 2 and 3 would only occur on a temporary basis due to roadway modifications when there is a requirement for closure or partial closure of roadways.
- **Operational Traffic**: The adverse operational traffic delays would occur with all four alternatives, due primarily to San Jose Diridon station traffic.

Consideration of Project Benefits and Potential Community Improvements

The project will have a wide range of benefits to both general populations in the project area and also to minority and low-income populations along the project alignments including the following:

- **Regional and intrastate travel options**: The high-speed rail project will provide a fast and efficient connection from San Jose and Gilroy to San Francisco, the Central Valley, and Southern California. Travel by high-speed rail is safer and faster than travel by personal vehicle.
- **Increased transit connectivity:** The high-speed rail service will be connected to other transit services in San Jose and Gilroy (and at other system stations) that allow travelers to take full advantage of transit connections. For example, between Santa Clara and Gilroy, riders can use Caltrain to connect to and from high-speed rail service from their local Caltrain stations.
- **Reduction of vehicle miles travelled on regional roadways**: The high-speed rail project will divert cars from regional highways such as I-880, US 101, I-280, SR87, SR85, and SR 152 which will benefit local residents who travel along these roadways.
- **Reduced need for expanding airports and highways:** By providing an alternative to long-distance passenger vehicle and airplane travel, the project will reduce the need to expand existing airports and highways which would otherwise affect residents adjacent to such facilities who would be affected by expansion, traffic increases, noise, and other effects.
- **Construction and operational spending and employment:** The high-speed rail project will provide jobs during construction and operation as well as spending locally on materials and supplies which will provide employment opportunities for local residents and economic welfare of local areas.
- **Improved regional air quality:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will improve regional air quality which will improve health conditions for local and regional residents.

- **Reduced greenhouse gas emissions:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will reduce greenhouse gas emissions which will help to reduce the effects of climate change over time.

The offsetting value of these project benefits relative to the residual DHAEs noted above for the San Jose Diridon community was evaluated as follows:

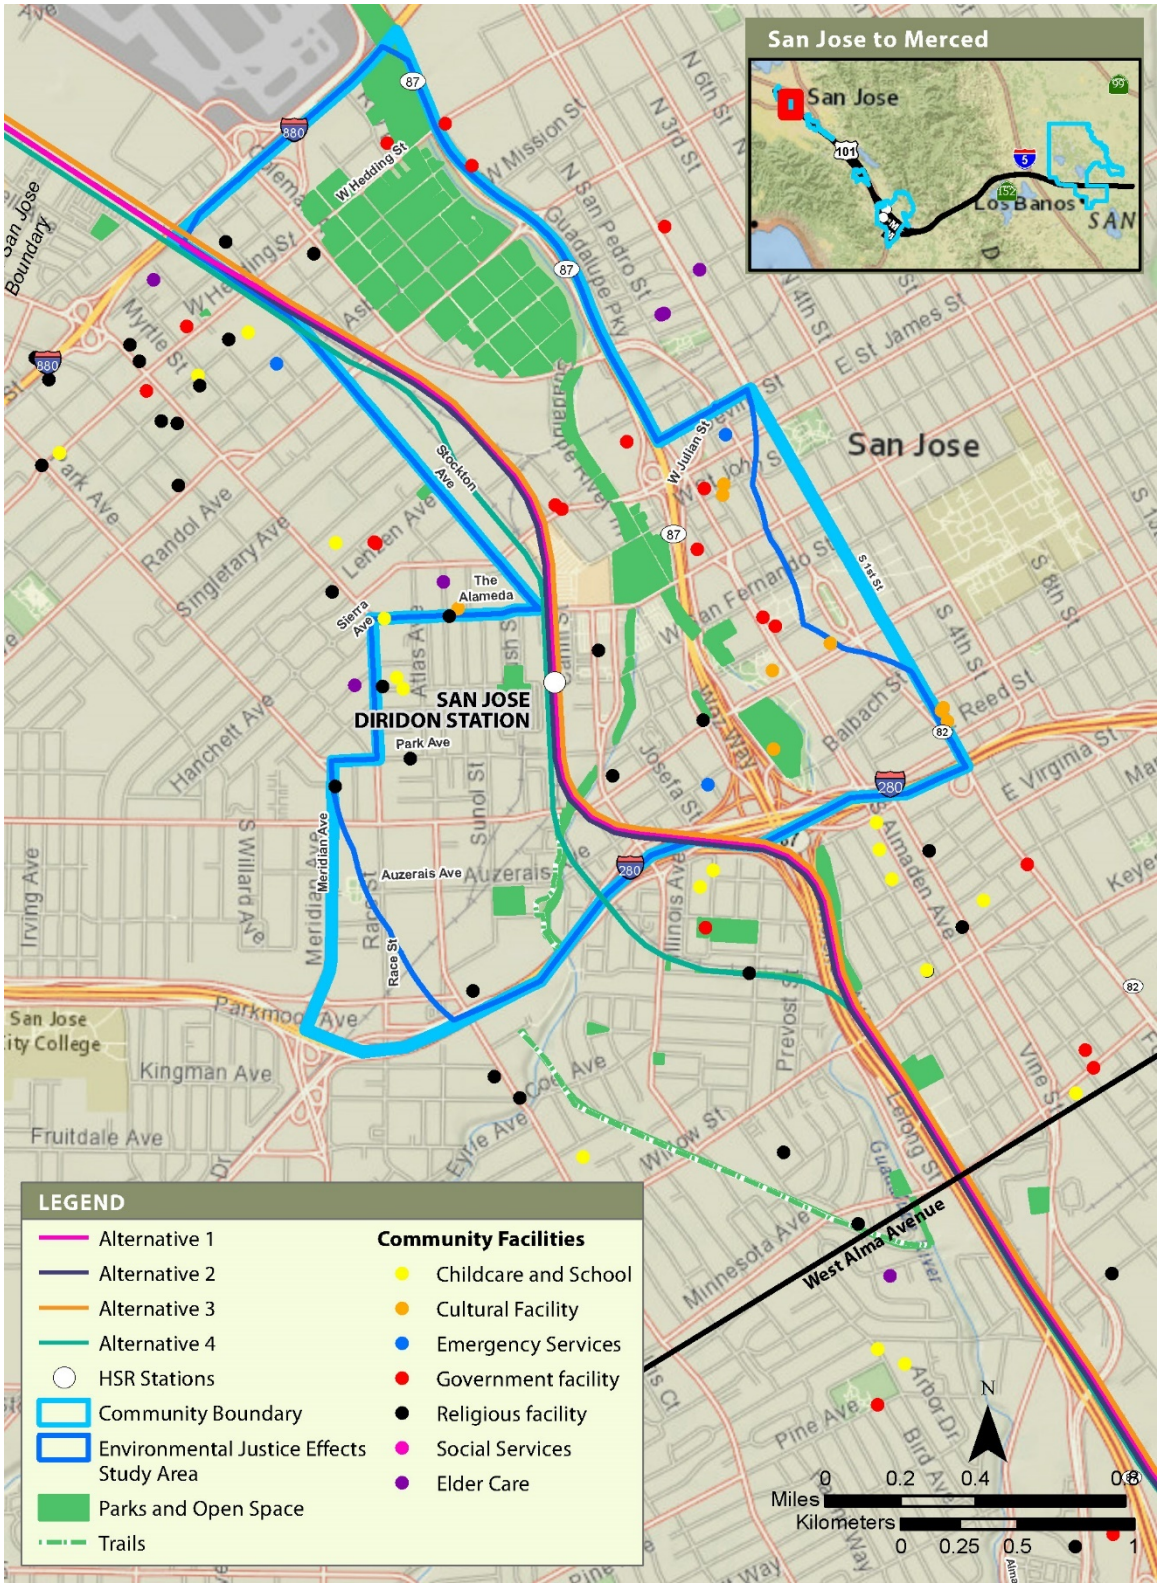
- **Construction Bus Transit Delay/Operational Traffic**: The increased travel options, transit connectivity, and regional vehicle miles travelled with the project are considered to offset both the temporary adverse bus transit delays during construction with Alternatives 1, 2 and 3 and the operational traffic delays with all four alternatives. The long-term benefit of introducing a substantial new travel option and investment in alternatives to passenger vehicle travel is considered to offset both the temporary bus transit delays and the localized operational traffic delays.
- **Aesthetics and Visual Quality/Operational Noise:** While the project would reduce adverse visual effects and noise effects associated with airport and highway expansion, this would not fully offset the adverse visual effects for Alternatives 1, 2, and 3 or the adverse noise effects with Alternative 4.

The Authority has identified the following potential community improvements:

- **Alternative 1, 2, and 3:** The Authority would provide funding to the City of San Jose to implement streetscape improvements to the Delmas neighborhood to improve both visual aesthetics and safety for local residents. While this measure will help improve community aesthetics it is not considered sufficient to offset the DHAEs of the aerial viaduct with Alternatives 1, 2 and 3.
- **Alternative 4:** The Authority would install noise insulation for existing residents immediately adjacent to the west side of SR87 (between West San Fernando Street and I-280) and the north side of I-280 (between SR 87 and Los Gatos Creek) to reduce noise effects from existing highway traffic. This measure would reduce community noise effects sufficient to offset the adverse noise effects with Alternative 4.

Preliminary Conclusion

After consideration of direct mitigation, project benefits and potential community improvements, there would potentially remain disproportionately high and adverse effects with Alternatives 1, 2 and 3 due to the aerial viaduct. After consideration of direct mitigation, project benefits and potential community improvements, there would potentially be no disproportionately high and adverse effects of Alternative 4 in the San Jose Diridon community area.



San Jose Diridon Community Area

Environmental Justice Analysis: San Jose to Merced (as of July 2021)

SOUTH SAN JOSE

The EIR/EIS for the San Jose to Merced project section evaluates effects on communities along the project alignment. Where adverse effects are identified, the Authority considers ways to mitigate these effects. The information provided below is preliminary as the Authority seeks community input to advance our environmental review. The Authority's conclusions will be included in the Final EIR/EIS for the project section after consideration of feedback through this round of outreach. After direct mitigation(meaning measures that avoid, minimize, or directly compensate for an adverse impact), the Authority evaluated the remaining effects for the entire project section (from Santa Clara to the Central Valley) to determine if there would be disproportionately high and adverse effects (DHAEs) to minority and/or low-income populations overall. Although there may be DHAEs based on analysis of the entire project section, DHAEs may not necessarily be found in each community along the alignment. The table below shows the outcomes of the EIR/EIS analysis in the South San Jose community area before consideration of project benefits or community improvements.

Summary of Potential Effects
South San Jose

Effects	Alternatives			
	1	2	3	4
Aesthetics and Visual Quality	●	●	●	○
Residential Displacements		◎		◎
Business Displacements	◎	◎	◎	◎
Emergency Response Delays	○	○	○	●
Parks	○	○	○	○
Operational Noise Effects	○	○	○	●
Operational Vibration	○	○	○	◎
Construction Traffic/Bus Transit Delay	●	●	●	○
Operational Traffic	●	●	●	●

● Potential disproportionately high and adverse effects (DHAE).

◎ Potential Effects *not* DHAE for the entire project section, but a particular community may still be affected.

○ Potential Effects not considered high and adverse.

The EIR/EIS identifies other effects (beyond the nine shown above), none of which would have a DHAE on minority and/or low-income populations. All effects are important regardless of whether they have a DHAE or not.

[1] *Construction traffic and bus transit delays during construction due to narrowing of Monterey Road.*

SOUTH SAN JOSE (p. 2)

As shown in the table above, in the South San Jose community area, with direct mitigation, there would be the following residual DHAEs:

- **Aesthetics and Visual Quality:** The adverse visual effects for Alternatives 1 and 2 are related to the aerial viaduct, which will be observable to residents along the high-speed rail alignment.
- **Emergency Response Delay:** The adverse emergency response delays for Alternative 4 are related to increased gate down time at the at-grade crossings at Skyway Drive, Branham Lane, and Chynoweth Avenue. Adverse delays greater than the delay threshold could occur if the City of San Jose chooses to not implement the improvements included in proposed direct mitigation measure SS-MM#4 based on the construction funding and partial operational funding proposed by the Authority.
- **Operational Noise:** The adverse operational noise effects with Alternative 4 are related to at-grade train operations, including the sounding of safety horns at the at-grade crossings.
- **Construction Traffic/Bus Transit Delays:** The adverse construction traffic delays and bus transit delays during construction with Alternatives 1, 2 and 3 would occur due to the narrowing of Monterey Road.
- **Operational Traffic:** The adverse operational traffic delays would occur due to the narrowing of Monterey Road (Alternatives 1, 2 and 3) or the increased gate-down time at at-grade crossings (Alternative 4).

Consideration of Project Benefits and Potential Community Improvements

The project will have a wide range of benefits to both general populations in the project area and also to minority and low-income populations along the project alignments including the following:

- **Regional and intrastate travel options**: The high-speed rail project will provide a fast and efficient connection from San Jose and Gilroy to San Francisco, the Central Valley, and Southern California. Travel by high-speed rail is safer and faster than travel by personal vehicle.
- **Increased transit connectivity:** The high-speed rail service will be connected to other transit services in San Jose and Gilroy (and at other system stations) that allow travelers to take full advantage of transit connections. For example, between Santa Clara and Gilroy, riders can use Caltrain to connect to and from high-speed rail service from their local Caltrain stations.
- **Reduction of vehicle miles travelled on regional roadways**: The high-speed rail project will divert cars from regional highways such as I-880, US 101, I-280, SR87, SR85, and SR 152 which will benefit local residents who travel along these roadways.
- **Reduced need for expanding airports and highways:** By providing an alternative to long-distance passenger vehicle and airplane travel, the project will reduce the need to expand existing airports and highways which would otherwise affect residents adjacent to such facilities who would be affected by expansion, traffic increases, noise, and other effects.

- **Construction and operational spending and employment:** The high-speed rail project will provide jobs during construction and operation as well as spending locally on materials and supplies which will provide employment opportunities for local residents and economic welfare of local areas.
- **Improved regional air quality:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will improve regional air quality which will improve health conditions for local and regional residents.
- **Reduced greenhouse gas emissions:** By reducing onroad vehicle travel and replacing it with electrified trains operating on renewable energy, the high-speed rail project will reduce greenhouse gas emissions which will help to reduce the effects of climate change over time.

The offsetting value of these project benefits relative to the residual DHAEs noted above for the South San Jose community was evaluated as follows:

- **Construction Traffic/Construction Bus Transit Delay/Operational Traffic:** The increased travel options, transit connectivity, and regional vehicle miles travelled with the project are considered to offset the temporary adverse construction traffic and bus transit delays during construction (Alternatives 1, 2 and 3) and the operational traffic delays (all alternatives).
- **Aesthetics and Visual Quality/Operational Noise:** While the project would reduce adverse visual effects and noise effects associated with airport and highway expansion, this would not fully offset the adverse visual effects for Alternatives 1, 2, and 3 or the adverse noise effects with Alternative 4.
- **Emergency Response Delay:** While the project would provide a safer long-distance travel option compared to passenger vehicle use and Alternative 4 would provide safety improvements to the existing rail corridor through fencing, four quad safety gates, median channelization, obstacle detection, and automated train controls, these benefits would not fully offset emergency vehicle response delays.

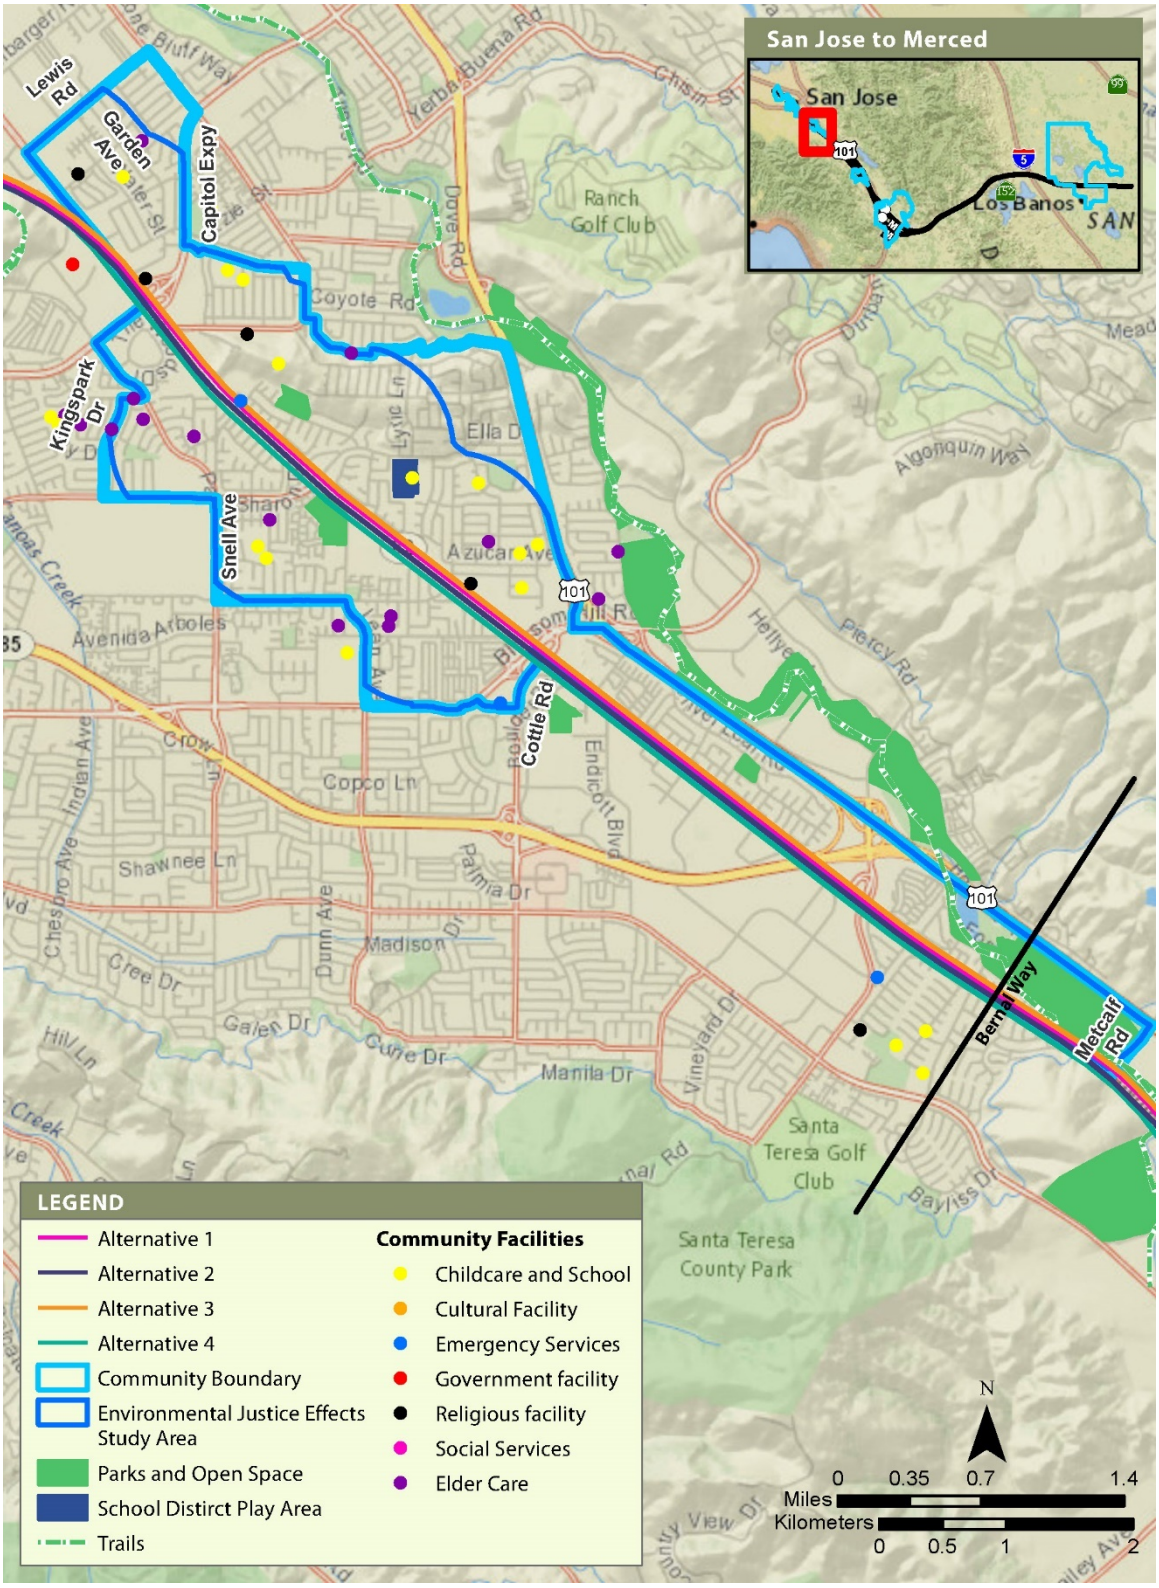
The Authority has identified the following community improvements:

- **Alternatives 1, 2, and 3:** The Authority would provide funding to the City of San Jose for landscape improvements included in City's Grand Boulevard initiative, but this measure is not considered sufficient to reduce the DHAEs of the aerial viaduct in this community area.
- **Alternative 4:**
    - The Authority would install noise insulation for up to 20 existing residences to reduce noise effects from existing traffic along the west side of US101 between Blossom Hill Road and SR 85. This measure would reduce community noise effects sufficient to offset the adverse noise effects with Alternative 4 in this community area.
    - The Authority would provide funding to the City of San Jose to construct three new pedestrian/bicycle overcrossings of Monterey Road and the railroad corridor at Skyway Drive, Branham Lane, and Chynoweth Avenue. While these measures would not avoid emergency response delays, they would enhance pedestrian and bicycle safety along Monterey Road and the railroad corridor in South San Jose, which in combination with the proposed direct mitigation and the project's benefits related to safety are together

considered sufficient to offset the emergency vehicle response delays with Alternative 4. As described in the Draft EIR/EIS, if the improvements included in proposed direct mitigation measure SS-MM#4 are implemented by the City of San Jose with the Authority's proposed funding, then adverse emergency response delays can be avoided.

Preliminary Conclusion

After consideration of direct mitigation, project benefits and potential community improvements, there would potentially remain disproportionately high and adverse effects with Alternatives 1, 2 and 3 due to the aerial viaduct. After consideration of direct mitigation, project benefits and potential community improvements, there would potentially be no disproportionately high and adverse effects with Alternative 4 in the South San Jose community area.



South San Jose Community Area

APPENDIX 5-B, ATTACHMENT D-3: COMMENTS SUBMITTED DURING SEPTEMBER 2021 OUTREACH PERIOD

CITY OF SAN JOSE
CAPITAL OF SILICON VALLEY

Department of Transportation
JOHN RISTOW, DIRECTOR

October 1, 2021

Boris Lipkin, Northern California Regional Director
California High-Speed Rail Authority
770 L Street, Suite 620
Sacramento, CA 95814

SUBJECT: City Comments on HSR Environmental Justice Analysis and Potential Community Improvements

Dear Boris Lipkin,

On behalf of the City of San José (City), thank you for the opportunity to review and comment on the High-Speed Rail Authority's Environmental Justice analysis and conclusions for the California High-Speed Rail San José to Merced Project Section. The City looks forward to continued opportunities to partner with California High Speed Rail Authority (HSR Authority) to address the identified areas of concern, resolve the remaining issues, and collaborate in multi-agency initiatives to fully build out the stations, facilities, and infrastructure to deliver high-quality service and improved quality of life for residents along the corridor.

General Comments

The City's comments below are focused on the analysis, proposed community improvements, and conclusions for Alternative 4. The HSR Authority in 2019 identified Alternative 4 as the State's Preferred Alternative in its draft environmental analysis documents. As discussed in the August 20, 2019 City Council hearing, Alternatives 1, 2, and 3 have significant and unavoidable impacts which are significantly reduced or resolved in Alternative 4. Since late 2019, City staff have focused most of its work on Alternative 4. Therefore, we have not undertaken extensive analysis of the disproportionate impacts and proposed offsetting community improvements for Alternatives 1, 2, and 3. In the Final EIR the City asks that HSR Environmental Justice analysis revisit the impacts and proposed improvements in the Seven Trees neighborhood as part of the South San José community area.

The City concurs with the proposed noise insulation improvements for existing residents across all four community areas:

- SJD-IMP#2: Noise insulation for certain residential buildings adjacent to the west side of SR 87

- GWG-IMP# 2: Noise Insulation for certain Residential Buildings adjacent to the west side of SR 87
- WGTA-IMP#3: Noise insulation for certain residential buildings adjacent to the east side of SR 87
- SSJ-IMP#3: Noise insulation for up to 20 residential buildings along the west side of US 101

The City requests that the HSR Authority work with existing community organizations to outreach to the most disadvantaged residents in each community area and assist them in applying for and receiving noise insulation improvements.

The City reiterates its ask that the HSR Authority negotiate an agreement with the Peninsula Joint Powers Authority (Caltrain) to not sound horns when traveling through Diridon, Tamien, Capital, and Blossom Hill Caltrain stations. The HSR project is altering or rebuilding each of those stations and can add measures to the station/platforms that would allow trains to pass without blowing their horns. Avoiding the horn noise would significantly mitigate the disproportionately high and adverse effects from HSR operations in the San José Diridon, Gardner/North Willow Glen, Guadalupe/Washington, and South San José community areas.

The City believes that the above noise insulation improvements, when combined with an agreement with Caltrain, would substantially offset the disproportionately high and adverse noise impacts from HSR in the San José Diridon and Guadalupe/Washington community areas.

The disproportionate noise, traffic, and emergency response impacts examined in environmental justice analysis and the EIR do not include the cumulative impacts of future increases by HSR plus other rail operators. The City has taken the position that these can be fully mitigated only through the complete grade separation of the rail corridor through all four community areas. While the Diridon Integrated Station Concept (DISC) is not a part of the project described in the EIR, it is essential for fully resolving impacts in the Diridon and Gardner/North Willow Glen community areas. The City asks the HSR Authority, when adopting the San José to Merced project, to reaffirm its commitment to participate in, and contribute proportionately to, implementing the Diridon Integrated Station as a separate project.

Gardner/Willow Glen Community Area

The City asks HSR Authority to add the "Fuller Park/Fuller Avenue Recreational Amenities" to the HSR project. Neighborhood leaders, Caltrain, and City staff partnered to develop Fuller Park – taking underutilized rail right-of-way and transforming it into a park used by many members of this historically disadvantaged neighborhood, including low-income, minority, and other disadvantaged people. While impacts to Fuller Park have been found to be de minimis, the inclusion of Fuller Park/Fuller Avenue Recreational Amenities would offset community concerns, build trust, and align with commitments from the City and partners like High Speed Rail to ensure that visual conditions are no worse, and ideally are better than today, even as train volumes grow with improvements like High Speed Rail.

The Valley Transportation Authority is pursuing a sound wall project at Gardner Elementary. Coordinating the proposed improvement "GWG-IMP#1: Gardner Elementary Noise Insulation or Soundwalls" with the VTA project could lead to improved outcomes and/or lowered costs for both agencies.

South San José

The City continues to believe that full grade separation between rail and major intersections is the safest solution to address increased train traffic and speed, and also helps preserve quality of life and emergency vehicle access.

In its comment letter on the Draft EIR, the City asked the Authority to:

- Include grade separations at: Skyway Drive, Branham Lane, and Chynoweth Avenue in the project, or provide proportionate share contribution to that grade separation project as mitigation measure in the Final EIR.
- Begin inter-agency negotiations on an agreement on the proportionate share contributions of funding for construction of those grade separations with the City and other relevant state, regional and local agencies.

The City appreciates the investment in the South San José Community Area represented by the proposed community improvements: SSJ-IMP#2a, SSJ-IMP#2b, and SSJ-IMP#2c. The effectiveness of the proposed community improvements would be greatly improved by adding flexibility to potentially fold these improvements into full grade separations. The City asks the following language (from SS-MM#4) around in-lieu payments be add to the SSJ-IMP#2 improvements:

> As an alternative to these strategies, the Authority and a local agency may reach a mutual agreement to have the Authority make an in-lieu payment toward other infrastructure projects including nearby grade-separation projects. The in-lieu payment would be the capital contribution that the Authority would have otherwise made to one or more of the community improvements.

Again, the City continues to believe grade separations are the best way to address safety and quality of life, and that they would also offset the disproportionately high and adverse effects with Alternative 4 in the South San Jose community area.

Conclusion

In closing, we thank the HSR Authority for the opportunity to comment on the updated Environmental Justice analysis. The City is committed to the HSR program and our joint work through DISC as a full partner. We will make our staff available to work through the issues raised in this comment letter with HSR.

Sincerely,

Jessica Zenk

RE: CHSRA's Environmental Justice Analysis: San Jose to Merced (as of July 2021)

Dear Mr. Lipkin,

We would like to thank the Authority for the opportunity to review the proposed preliminary measures that would address adverse effects on minority populations or low-income populations within Morgan Hill. The Authority's documents identify nine (9) types of effects that may have impacts and analyzed those effects for each Alternative. The effects are ranked in level of significance from disproportionately high and adverse effects (DHAE) to potential effects not considered high or adverse. The Authority identified a DHAE for Operational Traffic effects for Alternative 4 but did not propose a measure to alleviate the adverse effect. This is a major concern for the City and we would like the Authority to consider our comments and proposed measures to assist in offsetting the adverse impacts discussed in the next few paragraphs.

CHSRA'S POTENTIAL EFFECTS PRESENTATION

Potential Community Improvements
In addition to the improvements proposed for each alternative shown on slide 17, the City previously discussed incorporation of infrastructure along the rail right-of-way that would provide "purple pipe" or recycled water opportunities to support water conservation. The City also discussed inclusion of telecommunication conduits to provide internet access to those within the mapped community of concern area. The city does not agree that the Alterative 4 proposed mitigation for *noise insulation for certain residences along 101 helps offset residual project noise effects* for the alignment within the UPRR right-of-way tracks.

Preliminary Conclusions in Morgan Hill
While the chart on slide 15 indicates Alternative 4 has DHAE level Operational Noise and Operational Traffic effects, slide 18 is contractionary in stating Alternative 4 does not have DHAE effects. The City agrees that there is a DHAE effect related to Operational Noise and Operational

Traffic effects and is concerned that the Authority has not addressed the adverse Operational Traffic effects. Alternative 4 is located within the sphere of the community of concern and without grade separations will have safety implications such as impacts to emergency response times caused by traffic delay or road closures. Alternative 4 requires modifications to the Caltrain Station access and replacement of the pedestrian at grade crossing to a pedestrian underpass. We request the Authority work with the City, VTA, and Caltrain on the preparation of a master plan for the Morgan Hill train station access and pedestrian underpass in addition to providing grade separations at Tilton Avenue, East Dunne Avenue, and Tennant Avenue if Alterative 4 is selected for implementation. **In an effort to alleviate the disproportionately high and adverse effects (DHAE) to Operational Traffic effects on Alternative 4, the City is proposing NEPA Environmental Justice Analysis include a measure for funding a 30% design for a master plan of the pedestrian underpass and train station and grade separations at Tilton Avenue, East Dunne Avenue, and Tennant Avenue.**

We would like to thank you for your consideration of these comments and concerns. We appreciate the HSR staff's willingness to clarify the project design and objectives, and to discuss and resolve issues to achieve a project that completes the HSR Authority's mandate while minimizing impacts on the communities that will have to co-exist with the operating rail system long-term.

Sincerely,

Christina Turner

Re: Gilroy Unified School District's Urgent Request for Feasibility Study & Acquisition Planning

Dear Mr. Richard:

The purpose of this letter is to bring to your attention the impact that the High-Speed Rail project in Gilroy will have on Gilroy Unified School District facilities. We have met with representatives of the HSR for about 5 years. Despite these meetings and direct communications, it appears that very little, if any, planning has been undertaken to mitigate the impact that the HSR will have on both educational and operational facilities in our school district.

The District has provided to your representative (Ben Tripousis) the attached study outlining the impacted facilities:

a. South Valley Middle School – (6-8 campus, serves 883 students)
b. Gilroy Navigator Charter School (K-8 campus serves 540 students)
c. Transportation Department - bus yard, mechanic shop, department offices
d. Maintenance & Operations – truck & heavy equipment yard
e. Facility Department- department office space

Based on Hexagon's study, and several meetings with HSR representatives – there is agreement that the Gilroy Navigator Charter School will be impacted and will need to be relocated to another piece of property somewhere in Gilroy. The process to identify a suitable location to build a school is lengthy. It involves approvals from the California Department of Education (CDE), the Department of Toxic and Substances Control (DTSC), Division of the State Architects (DSA), and the City of Gilroy, and an array of related work from consultants needing our own Governing Board approval. Typically, it takes 5 years to build a school – once the site has been identified and acquired. We know this process well, as it took our Governing Board two (2) years to identify and acquire title to a suitable location to build a new elementary site in Gilroy.

Another challenge we face, is the City of Gilroy has a local Urban Boundary Ordinance in place, which effectively controls the area in the City that can be developed. Furthermore, there is a very

James E. Pace ◈ Linda Piceno ◈Jaime Rosso

limited supply of land in Gilroy, and the HSR Authority may need to pursue imminent domain provisions to secure a site for our charter school. Additionally, our operational facilities - Maintenance, Transportation, and Facilities Departments - will all need to be moved to another location.

In short, the contents of this letter have been discussed with HSR representatives many times. We appreciate that HSR representatives have attended our Board meetings and Facility Sub Committee meetings. During these meetings, we have expressed our level of concern at the lack of planning. It is exceedingly clear that the HSR's Right-Away division needs to find potential solutions to relocate our charter school and impacted operational facilities soon.

The HSR can wait until the Final Determination is made on the alignment – but this clearly means that the stated timeline on ridership **will not** be achieved. The Gilroy Unified School District's Governing Board fully intends to seek any and all available remedies and mitigation, as provided by law, to protect its schools as well as its operational needs.

Your urgent attention to this important matter is requested. Thank you for your time.

Sincerely,

Deborah A. Flores

Re: GUSD Feedback on the Potential Community Improvements & Site-Specific Traffic Measures with regard to the San Jose to Merced Project Section.

The Gilroy Unified School District (GUSD) would like to thank the High-Speed Rail Authority, and its representatives for keeping the District thoroughly informed of the San Jose to Merced Project Section, and the draft EIR/EIS as it moves through the approval process. The magnitude of the documents can be challenging to digest, but the HSR representatives have clearly been approachable and have met virtually with GUSD administrators to review the Potential Community Improvements, as well as highlighting the important considerations around Environmental Justice Analysis. This letter serves as GUSD's feedback on its prioritized improvements with the focus on the community and the students it serves.

- Overarching Recommendation: The District understands that the HSR Authority's "Preferred Alternative" is **Alternative 4. GUSD supports the Alternative 4 alignment of the San Jose to Merced Section above other possible alignments (1, 2, or 3).** GUSD is utterly opposed to Alternative 2, as it would have devastating impacts to District facilities, as outlined by the February 7, 2018 letter that was sent to the Authority (also attached).

The following comments represent GUSD's interest in seeing that the project, with Alternative 4 in mind, do not negatively impact the East Gilroy Community disproportionately, or have adverse effects on its community. Specifically, GUSD has 3 school campuses (Gilroy High School, South Valley Middle School, and its Navigator Charter School) that will be impacted by the HSR project and hereby conveys its feedback on the project segment.

Feedback on Potential Community Improvements

G-IMP#5: IOOF Bicycle/Pedestrian Overcrossing and Complete Streets

The South Valley Middle School campus serves about 765 students. Approximately 520 of these students fall under the economically disadvantaged category (68%). Gilroy High School (GHS) serves about 1,693 students, and approximately 1,095 of these students are low income students. The Navigator Charter School is closest to the railroad tracks and serves another 540 students. Combined, nearly 3,000 students are served between these three schools. In the view of GUSD, this project will absolutely impact the most disadvantaged community in Gilroy. **Disproportionally having adverse effects that require a proper mitigation.** Simply put, the proposed installation of quad gates at key, highly used intersections are not enough to offset the project's adverse effects.

- **GUSD prioritizes the bicycle/pedestrian overcrossing as its top priority at the location of IOOF.** Please see the attached Exhibit A, which is a plot of all current South Valley and GHS

BOARD OF EDUCATION
Melissa Aguirre Enrique Diaz Tuyen Fiack Mark Good
Michelle Nelson James E. Pace Linda Piceno

students. You will note the proximity to the high-speed rail project and this intersection of Monterey and IOOF. Each 'dot' on the map represents a student(s) residence. The livelihood of this community and of these students will change with high-speed rail. Ultimately, it is the mitigation factors that will determine if the change will be a positive one.

TR MM-G#1: Monterey Road/IOOF Avenue – Widen and Reconfigure Southbound

- The District supports this traffic mitigation measure. Combined with G-IMP#5 listed above, adding a turning left Southbound IOOF Avenue along with a bicycle/pedestrian overpass would be an appropriate mitigation, given the number of students and low-income community that travel this key intersection to get to our schools.

G-IMP#2: Bikeway Improvements (IOOF Ave., Monterey Road, 6th Street, 4th Street, Alexander Street)

- The District supports this community improvement. It is directly reflective in our collective efforts to create a safe walk/bike to school for our needy community in East Gilroy. Creating a safe way for kids to bike or walk to school is a direct benefit to this underserved community.

G-IMP#7: South Valley Middle School Recreational Amenities

- Alternative 2 has a disproportionally high and adverse effect on the Gilroy Unified School District. It impacts the Navigator School, South Valley, and potentially, the Maintenance Operations Yard as well as its Facilities Department and State Preschool (Swanston Ln). GUSD's concerns are documented and shared via the attached letter dated February 7, 2018.

TR-MM-G#4: Install Traffic Signal at the School Access/IOOF Avenue Intersection

A simple traffic light signal is not a proper mitigation given the disproportion impact the project has on this location. It is our understanding that not all high-speed railroad trains will stop in Gilroy. The express trains may bypass the IOOF intersection traveling at a "reduced speed" of 100 miles per hour. With Navigator Schools and South Valley Middle School within 1,200 feet of these tracks, it is imperative that the Bicycle/Pedestrian Overcrossing (G-IMP#5) improvement is actually built, offering a safe overcrossing for our community and our young students.

Residential Displacements

- The residential displacements under Alternative 2 is definitely classified as having the "potential disproportionately high and adverse effects (DHAE) to the South Valley Middle School Community and our Navigator Campus. There is no available adjacent land to relocate part of the field that the Navigator campus would lose under Alternative 2. To maintain the cohesiveness of the campus, it would require the High-Speed Rail Authority to use imminent domain on residential areas surrounding Swanston Lane and Forrest Street.

This complexity would obviously be costly and have a direct impact on GUSD's Navigator School and GUSD's obligations to provide "equitable facilities" for its charter school campus. Furthermore, Alternative 2 may also impact the location of the Transportation Department, and the Maintenance & Operations Yard, and its Facilities Department; all which support the day-to day operations of the

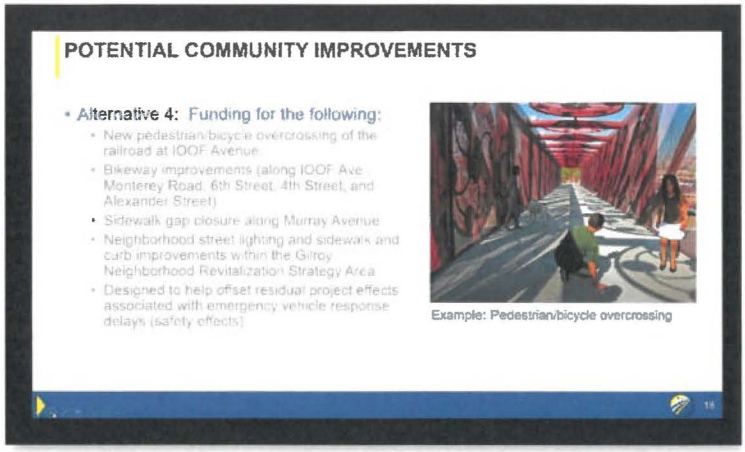
BOARD OF EDUCATION
Melissa Aguirre Enrique Diaz Tuyen Fiack Mark Good
Michelle Nelson James E. Pace Linda Piceno

entire district and its fifteen (15) schools. For this reason, the Alternative 4 alignment is strongly preferred by GUSD.



Ultimately, GUSD strongly urges the Authority to fund ***all*** these Potential Community Improvements noted during a community outreach meeting on Tuesday, September 28, 2021. We understand these are "potential" mitigations but based upon our view, the disproportional and direct impact on the lowest income, mostly minority population in Gilroy indeed require ALL these improvements to be funded in order to properly mitigate the impact of Alternative 4 on this disadvantaged community. The pedestrian bridge depicted to the right, may be the one located on Blossom and Santa Teresa. The IOOF and Monterey Pedestrian Bridge "ornamental design" elements could be developed as part of a community/student art contest that could be incorporated into the final design of the pedestrian bridge, pending constructability. This would bring a sense of ownership and pride to our community.

GUSD submits this letter as its formal response providing feedback to the Potential Community improvements with respect to the San Jose to Merced project segment.

Respectfully yours,

Álvaro Meza

Mr. Lenny Mendonca, Board Chair
Board of Directors
California High Speed-Rail Authority
770 L Street, Suite 620
Sacramento, CA 95814

Re: **Support of Staff-Recommended Preferred Alternative 4,**
San Jose to Merced Project Section
With the addition of a Pedestrian Bridge at IOOF and Monterey Street

Dear Mr. Mendonca:

The purpose of this letter is to state our conditional support for the High Speed Rail (HSR) staff's recommendation of the Preferred Alternative 4 for the San Jose to Merced Project section. The Alternative 4 at-grade alignment through downtown Gilroy would minimize the impact of HSR on the District's educational facilities. However, we urge you to consider safety elements at the intersection of IOOF and Monterey Streets in Gilroy, which are detailed below.

When the HSR reaches its target ridership, it is estimated that it will have up to eight (8) trains running per hour, in each direction. The HSR Authority must adequately address the safety of seven (7) pedestrian crossings through Gilroy. However, we are particularly concerned about the intersection of IOOF & Monterey Streets. We understand that quad-gates have been proposed for this intersection. Within 1,500 feet of this intersection, there are a number of buildings that house youth: South Valley Middle School serves about 900 middle school students, many of whom are our most socially and economically disadvantaged; Gilroy Prep School (GPS) which is a charter school that serves about 540 charter school students; and Rebekah Children's Services Campus that serves youth with social, emotional, behavioral and mental health needs. While we favor the Preferred Alternative 4 option, we believe the proposed quad-gates for pedestrians would not adequately protect the many students and families who will cross this intersection daily as trains pass through at 110 mph. We fear there could be a terrible accident, injuring or killing students as they cross this intersection coming to and going from school.

We urge you to include a pedestrian bridge crossing over the rail lines at the IOOF and Monterey Street intersection. We also request that you study other traffic mitigation measures such as traffic lights, and sound mitigation and fencing for GPS, which is located immediately adjacent to the tracks. These measures will help ensure pedestrian safety and help prevent injuries and fatalities.

Lastly, we want to commend the HSR staff and consultants that have interacted with Gilroy Unified School District, specifically Mr. Boris Lipkin, Northern California Regional Director, and Mr. Gary Kennerley, Engineering Manager at WSP. They have engaged our community openly, met with our representatives multiple times, and kept us informed.

Thank you for your time. Your assistance in this matter is greatly appreciated.

Sincerely,

Deborah A. Flores

APPENDIX 5-B, ATTACHMENT D-4: SURVEY RESULTS AND SURVEY FORMS SUBMITTED

CALIFORNIA
High-Speed Rail Authority

California High-Speed Rail San Jose to Merced: Environmental Justice Survey

EN ESPAÑOL/IN SPANISH: Haga clic aquí para completar la encuesta en Español
TIẾNG VIỆT/IN VIETNAMESE: Nhấn vào đây để hoàn thành khảo sát bằng tiếng Việt

This survey is a tool to gather community feedback on the Environmental Justice (EJ) analysis and conclusions for the California High-Speed Rail San Jose to Merced Project Section.

The deadline to complete this survey is October 1, 2021.

The California High-Speed Rail Authority (Authority) has scheduled community-specific meetings in September 2021 to update implementing partners, community organizations, and stakeholders on the EJ analysis. This analysis is being conducted as part of the San Jose to Merced Project Section Environmental Impact Report/Environmental Impact Statement (EIR/EIS).

Your feedback is important. The survey questions address community-specific informational materials shared with you via a website link. If you did not receive the information, please contact our outreach staff below. We recommend completing this survey on a computer so you can refer to the materials.

Materials List

1. **Glossary of Key Terms**
2. **Summary of Updates to the EIR/EIS Environmental Justice Analysis**
3. **Environmental Justice Analysis Process Summary and Graphic**
4. **Environmental Justice Community Summary**
   - **Summary**
   - **Community Improvements**

For some communities, other materials about proposed mitigations may also be included.

In the community-specific meetings, we will review information about the analysis and potential improvements, and answer questions. You may also reach out with any questions and/or comments to the contacts listed below.

Your input is valued and essential to the Authority. We look forward to hearing from you.

Questions?

* 1. Please select which community you represent. Select all that apply.

- [ ] San Jose Diridon
- [ ] S. San Jose
- [ ] Morgan Hill
- [ ] Gilroy
- [ ] City of Santa Clara
- [ ] Gardner/Willow Glen
- [ ] Guadalupe/Washington/Tamien/Alma/Almaden
- [ ] San Joaquin Valley/Los Banos
- [ ] I represent an agency

If you represent an agency, identify the agency where you work:

2. Are you completing this survey based on your personal opinion or as a representative?

- ( ) My opinion
- ( ) Representative of a group or organization (List group or organization)

3. How concerned are you about the following potential high-speed rail effects on your community?

[See: **4. Environmental Justice Community Summary:** *Summary of Potential Effects*]

Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

	1 Not concerned	2 Slightly concerned	3 Somewhat concerned	4 Moderately concerned	5 Very concerned
Traffic delay during construction	○	○	○	○	○
Bus transit delay during construction	○	○	○	○	○
Traffic delays during operations	○	○	○	○	○
Visual aesthetics	○	○	○	○	○
Residential displacements	○	○	○	○	○
Commercial displacements	○	○	○	○	○
Emergency vehicle response time delays	○	○	○	○	○
Noise during operations	○	○	○	○	○
Partial acquisitioning of park/play areas	○	○	○	○	○

If other effects not listed above are concerns, please describe them and rate them on a 1-5 scale (with 1 being not concerned and 5 being very concerned)

CALIFORNIA High-Speed Rail Authority

California High-Speed Rail San Jose to Merced: Environmental Justice Survey

4. Which of the following best describes your opinion about the statement below:

Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.

[See **4C: Environmental Justice Community Summary:** *Traffic Mitigation Measures*]

- ○ Strongly disagree
- ○ Disagree
- ○ Neither agree nor disagree
- ○ Agree
- ○ Strongly agree

Please explain

CALIFORNIA
High-Speed Rail Authority

California High-Speed Rail San Jose to Merced: Environmental Justice Survey

5. Do you agree with the conclusions about disproportionately high and adverse effects **after direct mitigation only**?

[See: **4. Environmental Justice Community Summary:** *Preliminary Conclusions*]

- ○ Strongly agree
- ○ Agree
- ○ Neither agree nor disagree
- ○ Disagree
- ○ Strongly disagree

6. What **benefits** of the high-speed rail project would help your community the most?

Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

	1 Not beneficial	2 Slightly beneficial	3 Somewhat beneficial	4 Moderately beneficial	5 Very Beneficial	N/A or don't know
California travel by high-speed train	○	○	○	○	○	○
Access to jobs, goods, and services	○	○	○	○	○	○
Integration with local transit connections	○	○	○	○	○	○
Reduction of highway traffic	○	○	○	○	○	○
Upgrades to railroad safety and signaling systems	○	○	○	○	○	○
Reduced need for airport and highway expansion	○	○	○	○	○	○
Reduced air pollution	○	○	○	○	○	○
Reduced greenhouse gas emissions	○	○	○	○	○	○
Construction spending and employment	○	○	○	○	○	○
Operational spending and employment	○	○	○	○	○	○
Support for transit-oriented development near stations	○	○	○	○	○	○

Comments

7. When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

- ○ Definitely ride
- ○ Probably ride
- ○ Maybe ride
- ○ Don't know

Why or why not?

8. Do you agree with the conclusions about disproportionately high and adverse effects **after consideration of direct mitigation, project benefits and potential community improvements**?

[See: **4. Environmental Justice Community Summary**]

- ○ Strongly agree
- ○ Agree
- ○ Neither agree nor disagree
- ○ Disagree
- ○ Strongly disagree

Please explain

9. Would you propose different community improvements from the list of potential community improvements?

If yes,

Describe a different improvement

Describe why you propose this improvement

Describe how your proposed improvement(s) would better address concerns in your community

10. Please provide any other input you may have.

11. What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

12. How helpful is this survey tool for providing your feedback?

- ○ Very helpful
- ○ Somewhat helpful
- ○ Not very helpful
- ○ Not at all helpful
- ○ Not applicable/not sure

Please provide any suggestions you would have for improving such surveys in the future:

CALIFORNIA
High-Speed Rail Authority

California High-Speed Rail San Jose to Merced: Environmental Justice Survey

Personal Information

13. Are you of Hispanic, Latino, or Spanish origin?

- ○ Yes
- ○ No

14. What is your race or ethnic identification? [Check one or more]

- ☐ White
- ☐ Black/African American
- ☐ Asian or Pacific Islander
- ☐ American Indian or Alaska Native
- ☐ Other (please specify)

15. What is your total household income before taxes?

- ◯ Under $25,000
- ◯ Between $25,000 and $29,999
- ◯ Between $30,000 and $39,999
- ◯ Between $40,000 and $49,999
- ◯ Between $50,000 and $59,999
- ◯ Between $60,000 and $69,999
- ◯ Between $70,000 and $74,999
- ◯ $75,000 and Over
- ◯ Not applicable
- ◯ Prefer not to answer

16. Including yourself, how many people live in your household?

- ◯ 1
- ◯ 2
- ◯ 3
- ◯ 4
- ◯ 5
- ◯ 6 or more

Q1

Please select which community you represent. Select all that apply.

Guadalupe/Washington/Tamien/Alma/Almaden,

If you represent an agency, identify the agency where you work::

NA

Q2

Are you completing this survey based on your personal opinion or as a representative?

My opinion

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**4 Moderately concerned**
Bus transit delay during construction	**3 Somewhat concerned**
Traffic delays during operations	**4 Moderately concerned**
Visual aesthetics	**5 Very concerned**
Residential displacements	**1 Not concerned**
Commercial displacements	**1 Not concerned**
Emergency vehicle response time delays	**3 Somewhat concerned**
Noise during operations	**5 Very concerned**
Partial acquisitioning of park/play areas	**1 Not concerned**

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Respondent skipped this question

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Neither agree nor disagree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**4 Moderately beneficial**
Access to jobs, goods, and services	**3 Somewhat beneficial**
Integration with local transit connections	**3 Somewhat beneficial**
Reduction of highway traffic	**3 Somewhat beneficial**
Upgrades to railroad safety and signaling systems	**2 Slightly beneficial**
Reduced need for airport and highway expansion	**2 Slightly beneficial**
Reduced air pollution	**2 Slightly beneficial**
Reduced greenhouse gas emissions	**2 Slightly beneficial**
Construction spending and employment	**3 Somewhat beneficial**
Operational spending and employment	**3 Somewhat beneficial**
Support for transit-oriented development near stations	**2 Slightly beneficial**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Maybe ride

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Neither agree nor disagree

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**Murals**
Describe why you propose this improvement	**Sound and blank walls will lead to graffiti/gang graffiti**
Describe how your proposed improvement(s) would better address concerns in your community	**Murals on blank walls reduce the potential for vandalism. Blank walls are otherwise a canvass for local gangs**

Q10

Please provide any other input you may have.

Guadalupe Washington is a gang hot spot in SJ, classified as such by the City government. Any blank walls (without murals) will get vandalized. Please consider paying for wall art by LOCAL muralists. I emphasize local because the mural also needs to be respected by the residents and gangs so it doesn't get vandalized.

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

Any wall art adopted for new walls added should be produced by local artists, so it is representative and meaningful to the neighborhood. If it is not respected or adopted by the locals (including local gangs), it will get vandalized.

Q12

How helpful is this survey tool for providing your feedback?

Somewhat helpful

Page 4: Personal Information

Q13

Are you of Hispanic, Latino, or Spanish origin?

Yes

Q14

What is your race or ethnic identification? [Check one or more]

Other (please specify):

NA

Q15

What is your total household income before taxes?

Prefer not to answer

Q16	4
Including yourself, how many people live in your household?

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Neither agree nor disagree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**5 Very Beneficial**
Access to jobs, goods, and services	**5 Very Beneficial**
Integration with local transit connections	**N/A or don't know**
Reduction of highway traffic	**N/A or don't know**
Upgrades to railroad safety and signaling systems	**N/A or don't know**
Reduced need for airport and highway expansion	**N/A or don't know**
Reduced air pollution	**N/A or don't know**
Reduced greenhouse gas emissions	**N/A or don't know**
Construction spending and employment	**N/A or don't know**
Operational spending and employment	**N/A or don't know**
Support for transit-oriented development near stations	**N/A or don't know**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Probably ride,
Why or why not?:
To better understand the ease of its use

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Neither agree nor disagree

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**Just to reiterate a clean & safe area surrounding HSR stations and pathways. Along with the absolute lowest possible noise restriction associated with HSR in general.**
Describe why you propose this improvement	**To keep our communities safe and residents unaffected by HSR presence nearby.**

Q10

Please provide any other input you may have.

Respondent skipped this question

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

It would have been nice for this project to have been completed already but understand that there is a process that takes time. As our neighborhood undergoes gentrification it would be nice to know that residents that have needed to leave the area could continue to access place of employment from other areas connected to HSR.

Q12

How helpful is this survey tool for providing your feedback?

Somewhat helpful

Oak Grove School District

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**3 Somewhat concerned**
Bus transit delay during construction	**2 Slightly concerned**
Traffic delays during operations	**2 Slightly concerned**
Visual aesthetics	**2 Slightly concerned**
Residential displacements	**2 Slightly concerned**
Commercial displacements	**1 Not concerned**
Emergency vehicle response time delays	**3 Somewhat concerned**
Noise during operations	**2 Slightly concerned**
Partial acquisitioning of park/play areas	**3 Somewhat concerned**

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Neither agree nor disagree

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Respondent skipped this question

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

Respondent skipped this question

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Respondent skipped this question

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Respondent skipped this question

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Respondent skipped this question

Q10

Please provide any other input you may have.

Respondent skipped this question

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

Respondent skipped this question

Q12

How helpful is this survey tool for providing your feedback?

Respondent skipped this question

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Neither agree nor disagree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**5 Very Beneficial**
Access to jobs, goods, and services	**5 Very Beneficial**
Integration with local transit connections	**5 Very Beneficial**
Reduction of highway traffic	**3 Somewhat beneficial**
Upgrades to railroad safety and signaling systems	**4 Moderately beneficial**
Reduced need for airport and highway expansion	**3 Somewhat beneficial**
Reduced air pollution	**4 Moderately beneficial**
Reduced greenhouse gas emissions	**4 Moderately beneficial**
Construction spending and employment	**5 Very Beneficial**
Operational spending and employment	**4 Moderately beneficial**
Support for transit-oriented development near stations	**3 Somewhat beneficial**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Probably ride

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Disagree

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Q1

Please select which community you represent. Select all that apply.

I represent an agency,

If you represent an agency, identify the agency where you work::

African American Community Service Agency

Q2

Are you completing this survey based on your personal opinion or as a representative?

Representative of a group or organization (List group or organization):
African American Community Service Agency

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**2 Slightly concerned**
Bus transit delay during construction	**3 Somewhat concerned**
Traffic delays during operations	**2 Slightly concerned**
Visual aesthetics	**2 Slightly concerned**
Residential displacements	**4 Moderately concerned**
Commercial displacements	**4 Moderately concerned**
Emergency vehicle response time delays	**2 Slightly concerned**
Noise during operations	**1 Not concerned**
Partial acquisitioning of park/play areas	**1 Not concerned**

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Strongly disagree

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Neither agree nor disagree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**3 Somewhat beneficial**
Access to jobs, goods, and services	**5 Very Beneficial**
Integration with local transit connections	**4 Moderately beneficial**
Reduction of highway traffic	**3 Somewhat beneficial**
Upgrades to railroad safety and signaling systems	**2 Slightly beneficial**
Reduced need for airport and highway expansion	**3 Somewhat beneficial**
Reduced air pollution	**4 Moderately beneficial**
Reduced greenhouse gas emissions	**4 Moderately beneficial**
Construction spending and employment	**4 Moderately beneficial**
Operational spending and employment	**4 Moderately beneficial**
Support for transit-oriented development near stations	**2 Slightly beneficial**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Probably ride,
Why or why not?:
Depends on the cost

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Strongly disagree,
Please explain:
I do not agree with potential community improvements, alternatives 1-4 that were listed

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**Re-establishment of the Inez Jackson Library**
Describe why you propose this improvement	**When significant changes are made to communities, underserved populations are hit the hardest and are the slowest to recover.**
Describe how your proposed improvement(s) would better address concerns in your community	**Re-establishment of the Inez Jackson Library is necessary because it serves our at risk populations. Many will be affected throughout the highspeed rail development process, so improving the Inez Jackson Library at the very least will show we care and understand the needs of our community,**

Q10

Please provide any other input you may have.

I just want to stress again the importance of re-establishing the Inez Jackson Library. Many youth programs have operated out of that location and it plays a significant role in their development and gives parents a hub to bring their children.

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

I urge you to think about when projects like this take place and are developed, who are the people getting hurt the most. And what are actionable/sustainable improvements when can make that show we understand and listen to what the community actually wants.

Q12

How helpful is this survey tool for providing your feedback?

Somewhat helpful

Page 4: Personal Information

Q13

Are you of Hispanic, Latino, or Spanish origin?

No

Q14

What is your race or ethnic identification? [Check one or more]

Black/African American

Q15

What is your total household income before taxes?

$75,000 and Over

Q16	2
Including yourself, how many people live in your household?

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

Respondent skipped this question

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Respondent skipped this question

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Respondent skipped this question

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Respondent skipped this question

Q10

Please provide any other input you may have.

Respondent skipped this question

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

San José Unified appreciates that the High-Speed Rail Authority may provide funding to help address potential adverse operational noise effects with Alternative 4 that remain after direct mitigation. We also appreciate the flexibility we would have regarding what noise treatments we might consider. We are very unlikely to pursue a soundwall on our property, which the Authority's cost estimate is based on, and it is important to us to be able to determine the most appropriate measures based on the circumstances at the time of implementation. We understand that $588,000 is all that's likely to be available at this time, but to the extent the amount of funding could potentially be increased if the most appropriate noise mitigation measure when the High-Speed Rail project moves forward costs more than the proposed $588,000, that would be helpful as well.

Q12

How helpful is this survey tool for providing your feedback?

Respondent skipped this question

Page 4: Personal Information

Q13

Are you of Hispanic, Latino, or Spanish origin?

Respondent skipped this question

Q14

What is your race or ethnic identification? [Check one or more]

Respondent skipped this question

Q15

What is your total household income before taxes?

Respondent skipped this question

Q16

Including yourself, how many people live in your household?

Respondent skipped this question

Q1

Please select which community you represent. Select all that apply.

I represent an agency,

If you represent an agency, identify the agency where you work::

Franklin-McKinley School District

Q2

Are you completing this survey based on your personal opinion or as a representative?

Representative of a group or organization (List group or organization):
Franklin-McKinley School District

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**5 Very concerned**
Bus transit delay during construction	**5 Very concerned**
Traffic delays during operations	**5 Very concerned**
Visual aesthetics	**3 Somewhat concerned**
Residential displacements	**1 Not concerned**
Commercial displacements	**1 Not concerned**
Emergency vehicle response time delays	**5 Very concerned**
Noise during operations	**5 Very concerned**
Partial acquisitioning of park/play areas	**3 Somewhat concerned**

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Disagree,
Please explain:
Our community will not be using this train line for commuting purposes so not expecting it to benefit at all.

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Neither agree nor disagree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**2 Slightly beneficial**
Access to jobs, goods, and services	**3 Somewhat beneficial**
Integration with local transit connections	**3 Somewhat beneficial**
Reduction of highway traffic	**2 Slightly beneficial**
Upgrades to railroad safety and signaling systems	**4 Moderately beneficial**
Reduced need for airport and highway expansion	**2 Slightly beneficial**
Reduced air pollution	**4 Moderately beneficial**
Reduced greenhouse gas emissions	**4 Moderately beneficial**
Construction spending and employment	**5 Very Beneficial**
Operational spending and employment	**5 Very Beneficial**
Support for transit-oriented development near stations	**5 Very Beneficial**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Maybe ride,
Why or why not?:
Trip with the kids just to enjoy the experience of high speed rail.

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Neither agree nor disagree

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Respondent skipped this question

Q10

Please provide any other input you may have.

Respondent skipped this question

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

Respondent skipped this question

Q12

How helpful is this survey tool for providing your feedback?

Somewhat helpful

Page 4: Personal Information

Q13

Are you of Hispanic, Latino, or Spanish origin?

No

Q14

What is your race or ethnic identification? [Check one or more]

Black/African American

Q15

What is your total household income before taxes?

$75,000 and Over

Q16

Including yourself, how many people live in your household?

Q1

Please select which community you represent. Select all that apply.

I represent an agency,

If you represent an agency, identify the agency where you work::

Working Partnerships USA

Q2

Are you completing this survey based on your personal opinion or as a representative?

Representative of a group or organization (List group or organization):
Working Partnerships USA

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**2 Slightly concerned**
Bus transit delay during construction	**3 Somewhat concerned**
Traffic delays during operations	**1 Not concerned**
Visual aesthetics	**2 Slightly concerned**
Residential displacements	**4 Moderately concerned**
Commercial displacements	**4 Moderately concerned**
Emergency vehicle response time delays	**2 Slightly concerned**
Noise during operations	**1 Not concerned**
Partial acquisitioning of park/play areas	**1 Not concerned**

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Agree,
Please explain:
This project has the opportunity to reduce traffic in specific communities and throughout the state.

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Agree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**5 Very Beneficial**
Access to jobs, goods, and services	**5 Very Beneficial**
Integration with local transit connections	**5 Very Beneficial**
Reduction of highway traffic	**5 Very Beneficial**
Upgrades to railroad safety and signaling systems	**5 Very Beneficial**
Reduced need for airport and highway expansion	**5 Very Beneficial**
Reduced air pollution	**5 Very Beneficial**
Reduced greenhouse gas emissions	**5 Very Beneficial**
Construction spending and employment	**5 Very Beneficial**
Operational spending and employment	**5 Very Beneficial**
Support for transit-oriented development near stations	**5 Very Beneficial**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Definitely ride,
Why or why not?:
Because this project provides an unprecedented form of travel

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Agree,
Please explain:
This plan has been a long process and the authority has done thorough outreach. More work will need to follow, but the proposed mitigation measures look good to this point.

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**NA**
Describe why you propose this improvement	**NA**
Describe how your proposed improvement(s) would better address concerns in your community	**NA**

Q10

Please provide any other input you may have.

NA

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

NA

Q12

How helpful is this survey tool for providing your feedback?

Very helpful

Page 4: Personal Information

Q13

Are you of Hispanic, Latino, or Spanish origin?

Yes

Q14

What is your race or ethnic identification? [Check one or more]

Other (please specify):

Latino

Q15

What is your total household income before taxes?

$75,000 and Over

Q16

Including yourself, how many people live in your household?

2

Page 1

Q1

Please select which community you represent. Select all that apply.

Gilroy

Q2

Are you completing this survey based on your personal opinion or as a representative?

Representative of a group or organization (List group or organization):
City of Gilroy

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**4 Moderately concerned**
Bus transit delay during construction	**4 Moderately concerned**
Traffic delays during operations	**5 Very concerned**
Visual aesthetics	**2 Slightly concerned**
Residential displacements	**3 Somewhat concerned**
Commercial displacements	**4 Moderately concerned**
Emergency vehicle response time delays	**5 Very concerned**
Noise during operations	**4 Moderately concerned**
Partial acquisitioning of park/play areas	**3 Somewhat concerned**

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Disagree,
Please explain:
Additional trains will create a significant amount of gate downtimes which will create significant delays for east/west crossings without a grade separated crossing.

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Agree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**5 Very Beneficial**
Access to jobs, goods, and services	**5 Very Beneficial**
Integration with local transit connections	**4 Moderately beneficial**
Reduction of highway traffic	**5 Very Beneficial**
Upgrades to railroad safety and signaling systems	**5 Very Beneficial**
Reduced need for airport and highway expansion	**4 Moderately beneficial**
Reduced air pollution	**4 Moderately beneficial**
Reduced greenhouse gas emissions	**4 Moderately beneficial**
Construction spending and employment	**3 Somewhat beneficial**
Operational spending and employment	**3 Somewhat beneficial**
Support for transit-oriented development near stations	**4 Moderately beneficial**
Comments:	High Speed Rail will provide infrastructure to increase CALTRAIN service to the City and might provide additional workforce, and better connect Gilroy residents and Valley residents to higher paying jobs in Silicon Valley, the Peninsula and Gilroy.

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Definitely ride,
Why or why not?:
faster travel along the corridor and convenience as opposed to driving.

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Agree

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Respondent skipped this question

Q10

Please provide any other input you may have.

We want to see a very well designed high quality train station and structured parking for the facility.

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

We would like to see some of these improvements implemented sooner, prior to construction of the HSR facilities.

Q12

How helpful is this survey tool for providing your feedback?

Very helpful

Page 4: Personal Information

Q13

Are you of Hispanic, Latino, or Spanish origin?

No

Q14

What is your race or ethnic identification? [Check one or more]

White

Q15

What is your total household income before taxes?

$75,000 and Over

Q16

Including yourself, how many people live in your household?

5

Q1

Please select which community you represent. Select all that apply.

Morgan Hill,

If you represent an agency, identify the agency where you work::

Morgan Hill Unified School District

Q2

Are you completing this survey based on your personal opinion or as a representative?

Representative of a group or organization (List group or organization):
Morgan Hill Unified School District

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**5 Very concerned**
Bus transit delay during construction	**5 Very concerned**
Traffic delays during operations	**5 Very concerned**
Visual aesthetics	**2 Slightly concerned**
Residential displacements	**2 Slightly concerned**
Commercial displacements	**3 Somewhat concerned**
Emergency vehicle response time delays	**5 Very concerned**
Noise during operations	**4 Moderately concerned**
Partial acquisitioning of park/play areas	**3 Somewhat concerned**
If other effects not listed above are concerns, please describe them and rate them on a 1-5 scale (with 1 being not concerned and 5 being very concerned):	Impact to school transit times, increasing the length of time students spend on the bus.

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Strongly disagree,
Please explain:
The addition of up to 16 trains per hour traveling through downtown Morgan Hill will cause significant increases in the time students spend on the bus, putting a strain on Morgan Hill families and their schedules.

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Neither agree nor disagree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**3 Somewhat beneficial**
Access to jobs, goods, and services	**4 Moderately beneficial**
Integration with local transit connections	**3 Somewhat beneficial**
Reduction of highway traffic	**4 Moderately beneficial**
Upgrades to railroad safety and signaling systems	**3 Somewhat beneficial**
Reduced need for airport and highway expansion	**3 Somewhat beneficial**
Reduced air pollution	**5 Very Beneficial**
Reduced greenhouse gas emissions	**5 Very Beneficial**
Construction spending and employment	**3 Somewhat beneficial**
Operational spending and employment	**3 Somewhat beneficial**
Support for transit-oriented development near stations	**3 Somewhat beneficial**
Comments:	The benefits will only be realized to the extent the HSR network is used by residents.

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Maybe ride,
Why or why not?:
For longer distances but for work purposes I need a car to travel between job locations during my workday.

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Neither agree nor disagree

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**School Bus Route Study**
Describe why you propose this improvement	**Identify the impacts and suggest routing alternatives/bus crossings to minimize the impact on student transit times.**
Describe how your proposed improvement(s) would better address concerns in your community	**Mitigate the potential negative impact to school bus transit as a result of alternatives 1-4**

Q10

Please provide any other input you may have.

Respondent skipped this question

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

Respondent skipped this question

Q12

How helpful is this survey tool for providing your feedback?

Somewhat helpful

Page 4: Personal Information

Q1

Please select which community you represent. Select all that apply.

Morgan Hill,

If you represent an agency, identify the agency where you work::

City of Morgan Hill

Q2

Are you completing this survey based on your personal opinion or as a representative?

Representative of a group or organization (List group or organization):
City of Morgan Hill

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**5 Very concerned**
Bus transit delay during construction	**1 Not concerned**
Traffic delays during operations	**5 Very concerned**
Visual aesthetics	**5 Very concerned**
Residential displacements	**5 Very concerned**
Commercial displacements	**4 Moderately concerned**
Emergency vehicle response time delays	**5 Very concerned**
Noise during operations	**5 Very concerned**
Partial acquisitioning of park/play areas	**5 Very concerned**
If other effects not listed above are concerns, please describe them and rate them on a 1-5 scale (with 1 being not concerned and 5 being very concerned):	See letter from City of Morgan Hill

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Strongly disagree

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Strongly disagree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**2 Slightly beneficial**
Access to jobs, goods, and services	**2 Slightly beneficial**
Integration with local transit connections	**1Not beneficial**
Reduction of highway traffic	**3 Somewhat beneficial**
Upgrades to railroad safety and signaling systems	**5 Very Beneficial**
Reduced need for airport and highway expansion	**2 Slightly beneficial**
Reduced air pollution	**4 Moderately beneficial**
Reduced greenhouse gas emissions	**4 Moderately beneficial**
Construction spending and employment	**1Not beneficial**
Operational spending and employment	**1Not beneficial**
Support for transit-oriented development near stations	**4 Moderately beneficial**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Definitely ride

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Strongly disagree

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**grade separations for Alterative 4**
Describe why you propose this improvement	**impacts on public safety and response times, circulation impacts and quality of life**
Describe how your proposed improvement(s) would better address concerns in your community	**Circulation and Safety are the primary concerns in the community. Grade separations would elevate this concern.**

Q10

Please provide any other input you may have.

See response letter from City of Morgan Hill

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

The proposed community benefits are not addressing the main concerns the community has.

Q12

How helpful is this survey tool for providing your feedback?

Not at all helpful,
Please provide any suggestions you would have for improving such surveys in the future::
Each alignment is different and could have a different response. This survey lumps everything together.

Agree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**3 Somewhat beneficial**
Access to jobs, goods, and services	**4 Moderately beneficial**
Integration with local transit connections	**4 Moderately beneficial**
Reduction of highway traffic	**5 Very Beneficial**
Upgrades to railroad safety and signaling systems	**4 Moderately beneficial**
Reduced need for airport and highway expansion	**5 Very Beneficial**
Reduced air pollution	**5 Very Beneficial**
Reduced greenhouse gas emissions	**5 Very Beneficial**
Construction spending and employment	**5 Very Beneficial**
Operational spending and employment	**5 Very Beneficial**
Support for transit-oriented development near stations	**5 Very Beneficial**
Comments:	New playground or playground enhancements in order to provide the community with a better experience during an after school hours Building repairs such as new roof or repairs in order to provide a proper space for the students and community New PA system in order to mitigate some of the noise problems that will arise during construction and after with the increase of traffic Building and community aesthetics i.e trees, new grass or turf, etc Pedestrian and Traffic Safety remedies such as “STOP AHEAD” painted on Virginia before the stop sign, more School Zone signs, speed bumb, etc

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Probably ride

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Agree

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**New playground or playground enhancements in order to provide the community with a better experience during an after school hours Building repairs such as new roof or repairs in order to provide a proper space for the students and community New PA system in order to mitigate some of the noise problems that will arise during construction and after with the increase of traffic Building and community aesthetics i.e trees, new grass or turf, etc Pedestrian and Traffic Safety remedies such as "STOP AHEAD" painted on Virginia before the stop sign, more School Zone signs, speed bumb, etc**

Q10

Please provide any other input you may have.

New playground or playground enhancements in order to provide the community with a better experience during an after school hours
Building repairs such as new roof or repairs in order to provide a proper space for the students and community
New PA system in order to mitigate some of the noise problems that will arise during construction and after with the increase of traffic
Building and community aesthetics i.e trees, new grass or turf, etc
Pedestrian and Traffic Safety remedies such as "STOP AHEAD" painted on Virginia before the stop sign, more School Zone signs, speed bumb, etc

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

New playground or playground enhancements in order to provide the community with a better experience during an after school hours
Building repairs such as new roof or repairs in order to provide a proper space for the students and community
New PA system in order to mitigate some of the noise problems that will arise during construction and after with the increase of traffic
Building and community aesthetics i.e trees, new grass or turf, etc
Pedestrian and Traffic Safety remedies such as "STOP AHEAD" painted on Virginia before the stop sign, more School Zone signs, speed bumb, etc

Q12

How helpful is this survey tool for providing your feedback?

Somewhat helpful,
Please provide any suggestions you would have for improving such surveys in the future::
New playground or playground enhancements in order to provide the community with a better experience during an after school hours Building repairs such as new roof or repairs in order to provide a proper space for the students and community New PA system in order to mitigate some of the noise problems that will arise during construction and after with the increase of traffic Building and community aesthetics i.e trees, new grass or turf, etc Pedestrian and Traffic Safety remedies such as “STOP AHEAD” painted on Virginia before the stop sign, more School Zone signs, speed bumb, etc

Please select which community you represent. Select all that apply.

I represent an agency,

If you represent an agency, identify the agency where you work::

County of Santa Clara

Q2

Are you completing this survey based on your personal opinion or as a representative?

Representative of a group or organization (List group or organization):
County of Santa Clara

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**1 Not concerned**
Bus transit delay during construction	**1 Not concerned**
Traffic delays during operations	**1 Not concerned**
Visual aesthetics	**1 Not concerned**
Residential displacements	**5 Very concerned**
Commercial displacements	**1 Not concerned**
Emergency vehicle response time delays	**1 Not concerned**
Noise during operations	**1 Not concerned**
Partial acquisitioning of park/play areas	**1 Not concerned**
If other effects not listed above are concerns, please describe them and rate them on a 1-5 scale (with 1 being not concerned and 5 being very concerned):	Santa Clara County's Office of Supportive Housing is concerned about the potential displacement and other negative impacts on people experiencing homelessness who live in the vicinity of the project site. We rank this concern as a 5.

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Neither agree nor disagree

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Neither agree nor disagree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**N/A or don't know**
Access to jobs, goods, and services	**N/A or don't know**
Integration with local transit connections	**N/A or don't know**
Reduction of highway traffic	**N/A or don't know**
Upgrades to railroad safety and signaling systems	**N/A or don't know**
Reduced need for airport and highway expansion	**N/A or don't know**
Reduced air pollution	**N/A or don't know**
Reduced greenhouse gas emissions	**N/A or don't know**
Construction spending and employment	**N/A or don't know**
Operational spending and employment	**N/A or don't know**
Support for transit-oriented development near stations	**N/A or don't know**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Don't know

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Disagree,
Please explain:
Conclusions need to consider mitigations for people experiencing homelessness.

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**Provide flexible financial assistance for people experiencing homelessness to assist with their relocation.**
Describe why you propose this improvement	**People experiencing homelessness will be displaced by the proposed project.**
Describe how your proposed improvement(s) would better address concerns in your community	**Santa Clara County has a housing crisis which is a priority issue for the County to address.**

Q10

Please provide any other input you may have.

Please feel free to contact me with any questions or comments at Michelle.Covert@hhs.sccgov.org.

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

n/a

Q12

How helpful is this survey tool for providing your feedback?

Very helpful

Page 4: Personal Information

Q13

Are you of Hispanic, Latino, or Spanish origin?

No

Q14

What is your race or ethnic identification? [Check one or more]

White

Q15

What is your total household income before taxes?

Not applicable

Q16

Including yourself, how many people live in your household?

1

Q1

Please select which community you represent. Select all that apply.

City of Santa Clara

Q2

Are you completing this survey based on your personal opinion or as a representative?

Representative of a group or organization (List group or organization):
City of Santa Clara, Department of Public Works

Q3

How concerned are you about the following potential high-speed rail effects on your community? [See: 4. Environmental Justice Community Summary: Summary of Potential Effects] Please indicate how concerned you are about each potential effect listed below. Use a scale of 1 to 5 (with 1 being not concerned and 5 being very concerned)

Traffic delay during construction	**4 Moderately concerned**
Bus transit delay during construction	**3 Somewhat concerned**
Traffic delays during operations	**2 Slightly concerned**
Visual aesthetics	**5 Very concerned**
Residential displacements	**3 Somewhat concerned**
Commercial displacements	**3 Somewhat concerned**
Emergency vehicle response time delays	**3 Somewhat concerned**
Noise during operations	**4 Moderately concerned**
Partial acquisitioning of park/play areas	**5 Very concerned**

Page 2

Q4

Which of the following best describes your opinion about the statement below: Once the trains are operating, site-specific traffic mitigations will substantially reduce traffic intersection delays.[See 4C: Environmental Justice Community Summary: Traffic Mitigation Measures]

Respondent skipped this question

Page 3

Q5

Do you agree with the conclusions about disproportionately high and adverse effects after direct mitigation only? [See: 4. Environmental Justice Community Summary: Preliminary Conclusions]

Disagree

Q6

What benefits of the high-speed rail project would help your community the most? Please rate how each benefit described below would help your community on a scale of 1 to 5 (with 1 being not beneficial and 5 being very beneficial)

California travel by high-speed train	**5 Very Beneficial**
Access to jobs, goods, and services	**5 Very Beneficial**
Integration with local transit connections	**3 Somewhat beneficial**
Reduction of highway traffic	**3 Somewhat beneficial**
Upgrades to railroad safety and signaling systems	**4 Moderately beneficial**
Reduced need for airport and highway expansion	**5 Very Beneficial**
Reduced air pollution	**4 Moderately beneficial**
Reduced greenhouse gas emissions	**5 Very Beneficial**
Construction spending and employment	**4 Moderately beneficial**
Operational spending and employment	**3 Somewhat beneficial**
Support for transit-oriented development near stations	**5 Very Beneficial**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Definitely ride,
Why or why not?:
I would like to more frequently access these areas and congestion levels current prevent me from doing this.

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Disagree,
Please explain:
The analysis does not address aesthetic and visual quality. The explanation is that there is no feasible mitigation. However, the City (PW) has offered several multimodal improvements that would improve overall quality of life for residents. Active transportation can have health benefits and can improve quality of life which in itself can help mitigate or alleviate other quality of life issues such as aesthetics and visual quality.

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**Multimodal Improvements such as suggested by the City of Santa Clara DPW and listed as "Other Improvements Considered"**
Describe why you propose this improvement	**These improvements will improve quality of life for residents and stakeholders in the affected area.**
Describe how your proposed improvement(s) would better address concerns in your community	**Same answer as listed in #7.**

Q10

Please provide any other input you may have.

I was disappointed that early in the process, the City of Santa Clara, DPW was asked to provide ideas and concepts related to multimodal improvements that could provide benefit if the EJ analysis showed impacts. These projects are listed as Other Improvements Considered and are disregarded as not providing direct benefit. This appears to be a "change" in how EJ is being analyzed and considered as compared to the original description provided by HSR Authority staff. This "change" appears to be related to budget but is not specifically stated as such. Additionally, significant time and energy was spent by City staff to provide recommendations with no reasonable explanation except that the "direction" of the overall analysis changed.

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

No comment at this time.

Q12

How helpful is this survey tool for providing your feedback?

Somewhat helpful

Page 4: Personal Information

Q13 Are you of Hispanic, Latino, or Spanish origin?	**No**
Q14 What is your race or ethnic identification? [Check one or more]	**Asian or Pacific Islander**
Q15 What is your total household income before taxes?	**Prefer not to answer**
Q16 Including yourself, how many people live in your household?	**3**

Q7

When the high-speed rail system reaches Gilroy and San Jose (planned for 2031), do you think you would use the high-speed rail service?

Respondent skipped this question

Q8

Do you agree with the conclusions about disproportionately high and adverse effects after consideration of direct mitigation, project benefits and potential community improvements? [See: 4. Environmental Justice Community Summary]

Disagree,

Please explain:

Impact on neighborhood schools was not fully accounted for considering how schools provide the central hub for community involvement in lower wealth areas.

Q9

Would you propose different community improvements from the list of potential community improvements? If yes,

Describe a different improvement	**Caroline Davis Intermediate School All Weather Turn and Track**
Describe why you propose this improvement	**Caroline Davis Intermediate School provides green open space for the community in the area.**
Describe how your proposed improvement(s) would better address concerns in your community	**The new track would allow free public access to an exercise venue.**

Q10

Please provide any other input you may have.

Respondent skipped this question

Q11

What, if any, specific feedback do you have with regard to the scope, timing, or roles/responsibilities associated with implementation of the proposed community improvements?

Respondent skipped this question

Q12

How helpful is this survey tool for providing your feedback?

Somewhat helpful

Page 4: Personal Information

Q13

Asian or Pacific Islander

Q15

What is your total household income before taxes?

Not applicable

Q16

Including yourself, how many people live in your household?

Respondent skipped this question

APPENDIX 5-B, ATTACHMENT D-5: AFTER-ACTION REPORTS FOR SEPTEMBER 2021 MEETINGS

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
City of Morgan Hill Implementing Partner Meeting
Date of Event
Tuesday September 7, 2021, 3:00 – 4:15pm
Recorder of Event
Rickie Cleere
Participants/Attendees

- **Representatives:** Edith Ramirez, Tiffany Brown, Christina Turner, Rebecca Garcia, Chris Ghione
- **Staff**: Audrey Van, Morgan Galli, Rich Walter, Cici Vu, Rickie Cleere

Purpose of Event

- Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements
- Share Preliminary Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Potential Community Improvements Presented:

- Alternatives 1 and 3:
  - Funding to the City of Morgan Hill to implement trail and park improvements under the viaduct to offset visual aesthetic effects
- Alternative 2:
  - Funding to implement complete streets improvements along Railroad Avenue to offset visual aesthetic effects.
  - Partial funding for affordable housing to offset residential displacement that cannot be relocated locally based on housing market
- Alternative 4:
  - Noise insulation for certain residences along 101 helps to offset residual project noise effects

Key points of concern from partner; any preliminary feedback to directed questions:

- Noise insulation along the 101 freeway should not be considered a community improvement, as it benefits community members who mostly live in single family residences and does not mitigate impacts for community members who are the most vulnerable. Alternatively, could there be insulation for schools or other gathering points along the route?
  - R: Noise insulation for certain residences along the 101 would help to offset residual project noise effects. Sound insulation installation is proposed in the EIR/EIS for residences located along the project alignment. The community analysis assesses existing sources of noise, and the other main noise source other than the rail is the 101 freeway. The main focus of the analysis was on spaces between the freeway and adjacent to the project

- Sound walls are not included in the Morgan Hill General Plan.
    - R: Sound walls are not being proposed, but rather sound insulation for adjacent structures.
- Morgan Hill School District is concerned that train traffic experienced under Alternative 4 will impact bus routes
    - R: Four intersections in Morgan Hill would experience adverse effects. Three of these intersections would experience reduced effects with mitigation.

Questions/Responses:

- Q: We will help share the 9/21 meeting with our community. Would it be possible to provide a general HSR update as well? Our Council has requested updated info. Thank you!
    - R: That meeting will not be a general community meeting. It is for specific community representatives our team has been engaging with throughout this process. For that reason, we kindly ask that the city not share the meeting info with the broader community.
    - We can certainly provide general update at the community stakeholder meeting. The targeted audience includes school community and members of the community that the City has identified, so in this sense, it includes a subsection of the broader community.
- Q: The "Summary of Potential Effects" slide table had footnotes. What are they?
    - R: [1] Emergency Response Delay > 30 seconds occurs near E. Middle Avenue east of the railroad corridor, but the affected area is not disproportionately minority or low-income.[2] Morgan Hill Community and Cultural Center– construction disruption of amphitheater use. Villa Mira Monte– construction disruption of outdoor special event use. [3] Bus transit delays during construction.
- Q: Alternative 4 requires noise and traffic mitigations, correct?
    - R: When community benefits are considered, the transportation benefit offsets traffic impacts. However, there are still residual noise impacts that require additional mitigation.
- Q: Potential project effects are above and beyond what was identified to be mitigated within the Draft EIR correct? Are these mitigations not the same as those in the draft EIR/EIS?
    - R: Correct. The draft EIR/EIS had direct mitigations built in to address immediate effects (ex: noise road insulation). The improvements here offset residual DHAE effects after the consideration of project benefits.
- Q: Who did the ranking of the other improvements that were considered?
    - R: Authority staff and environmental consultant. The preliminary evaluation was conducted using a 120-point scale.
- Q: While the authority has identified a selection of measures to potential issues, we need to provide feedback grounded in the preferred alternative and whether additional measures could be incorporated that demonstrate a nexus to DHAE? For alternative 4, we can identify potential safety and connectivity solutions that also affect transportation.
    - R: The framing of the relationship between the project and its effects is something that you can provide feedback on as well. The analysis of effects and mitigations used by the Authority was done on a point for point mitigation basis (noise for noise, etc.). "Out-of-kind" arguments are generally more difficult to make.
- Q: Some of the measures are more general while others are more geographically focused (ex: Coyote creek). Would measures be across Morgan Hill, also going into San Martin?
    - R: The measures are specific to the Morgan Hill area, though some are further out than others.
- Q: Will there be no community improvements proposed to address traffic, only noise?
    - The transportation benefit is considered to offset the adverse traffic impacts, preventing a need for additional improvements.

- Q: Are the other improvements considered applicable to the four alternatives being analyzed?
    - R: Not all would be appropriate for every alternative based on impacted geographies. The Authority selects improvements only if they are connected to residual DHAEs. The 16 other improvements considered are not viewed as having a relationship to the residual effects at this time, though this may change if communities put forth rationale for the Authority to consider.
- Q: City Staff is tracking the HSR EIR/EIS process, but the community will want to know full set of proposed mitigations. What is schedule for notification?
    - R: The final EIR/EIS is scheduled for completion by February 2022. The Authority's Record of Decision (ROD) board meeting is scheduled for March 2022. Prior to this, meetings will be held with City staff to respond to comments received and other materials applicable to the final EIR. There will also be outreach to Community and Technical Working Groups (CWG/TWG) 1-2 weeks after the final EIR and before the ROD. There may be TWG meetings before the final EIR is released.
- Q: For Alternative 2, displacement of housing was only along 101 (the viaduct option)? This alternative will have the biggest property impacts, but residence impacts are limited?
    - R: Partial funding for affordable housing under Alternative 2 would offset residential displacement that could not be relocated locally based on the housing market. The community summary and table include details on the geographic targets for noise insulation along the 101 freeway.

Next Steps/Actions/Follow-up:

- Community Meeting: Tuesday September 21, 5:00-7:00PM
    - The Outreach team will meet with the new superintendent of Morgan Hill Unified School District prior to this meeting to identify parent/community group representatives that should attend as well.
- By COB Friday September 10.
    - The Authority will check in with City staff on an appropriate date and time to present and discuss with City Council.

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
City of Gilroy Implementing Partner Meeting
Date of Event
Friday September 10, 2021, 3:00 – 4:15pm
Recorder of Event
Rickie Cleere
Participants/Attendees
• Karen Garner, Community Development Director • Daryl Jordan, Public Works Director • Kraig Tamborini, Senior Planner • **Staff:** Rich Walter, Morgan Galli, Joan Isaacson, Rickie Cleere
Purpose of Event
• Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements • Share Preliminary Conclusions • Gain feedback on directed questions • Address clarifying questions on meeting materials, desired feedback and conclusions
Key Notes

Key points of concern from partner; any preliminary feedback to directed questions:

- We are concerned about emergency response delay. In the summary, it states that there is emergency response delay for Alternative 4 and then there is reference to mitigation measure sfmm#4. I am not sure what that refers to.
    - Mitigation related to the potential for emergency response delays is in the draft EIR/EIS Section 3.11: Safety and Security. The mitigation is for emergency vehicle response related to station traffic and includes a range of improvements related to the gate downtime effect for Alternative 4. One solution would be to potentially include a partial station with HSR covering operation costs for 5 years. Another solution would include an at grade monitoring station separate from the train monitoring system operated by the Authority, which would be tied into police and fire dispatch. A similar system is currently used in Sugarland, Texas. A monitoring assessment may lag behind the effects, so the Authority will perform more forecasting closer to the 2031 project launch date. Because the gate downtime effect will presumably increase over time, we aim to implement the improvements proactively to address effects.

Questions/Responses:

- Q: Who are you reaching out to for the Community Meetings. Is there a list available?
    - R: Representatives of targeted EJ stakeholder groups. We will share the list.
- Q: Will the eventual outcome be the Board's final selection of an alternative after the Final EIR/EIS? Will these EJ measures be included if the project proceeds?

  - R: Correct. The Final EIR/EIS will be released in February 2022 and the Board will meet in March to certify the Final EIR/EIS including the mitigation and intent for community improvements, and to decide on an alternative.

- Q: Is there a minimum obligation for the improvements. Is the decision-making flexible?
  - R: We are proposing feasible improvements that we think offset project impacts. The findings assume and incorporate the mitigation that will be included in the Final EIR/EIS. They will become commitments at that time, and implementation will rely on the acquisition of funds for the project section.
- Q: Are we being asked to complete the survey. Will other stakeholders be providing feedback on the same materials?
  - R: Yes, that is correct.
- Q: Is the weight of feedback the same? We have a different perspective than residents may have.
  - R: We will look at all feedback provided. The survey asks respondents to indicate affiliation. As a potential partner for implementing the measures, your feedback will be weighed appropriately.
- Q: Are the mitigation measures in the EIR/EIS separate from the potential community improvements? Are those related to safety and emergency vehicle response for people living near the alignment?
  - Correct. The measure address people living near the alignment who are most impacted as well as impacts to cyclists, sidewalk users, and lighting. The improvements in downtown address gate downtime and enhance safety in environmental justice communities as a different way of offsetting impacts. The mitigations proposed in the EIR are more directly related to the impacts they are intended to address.

Next Steps/Actions/Follow-up:

- Community Meeting: Tuesday September 28, 5:00-7:00PM
- Outreach Team to provide a list of groups/organizations invited to community meeting (below, shared in follow up communication)
  - CARAS South County
  - Gilroy Prep School
  - Navigator Schools
  - Gilroy High School
  - South Valley Middle School
  - Alexander Station
  - Rebekah Children's Services
  - Santa Clara County Office of Supportive Housing
  - HomeFirst
  - Gavilan College
  - City of Gilroy
  - Gilroy Unified School District
  - Santa Clara County Parks and Recreation
  - Santa Clara Valley Transportation Authority
  - Mission College
  - Center For Employment Training
  - San Jose City College
  - Silicon Valley Rising

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Gilroy Unified School District: High-Speed Rail Environmental Justice Meeting
Date of Event
Wednesday September 8, 2021, 2:00pm – 3:15pm
Recorder of Event
Rickie Cleere
Participants/Attendees
• **Representatives:** Alvaro Meza, Guillermo Ramos, Greg Kapaku • **Staff**: Audrey Van, Rich Walter, Cici Vu
Purpose of Event
• Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements • Share Preliminary Conclusions • Gain feedback on directed questions • Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Potential Community Improvements Presented

- Alternatives 1, 2 and 4:
  - Noise insulation for certain residences along 101 to help offset residual project noise effects
- Alternative 2:
  - Funding of recreational amenities for the South Valley Middle School to help offset partial acquisition of track/field
  - Partial funding for affordable housing to offset residential displacement that cannot be relocated locally based on housing marke
- Alternative 4 - Funding for the following:
  - New pedestrian/bicycle overcrossing of the railroad at IOOF Avenue
  - Bikeway improvements (along IOOF Ave., Monterey Road, 6th Street, 4th Street, and Alexander Street)
  - Sidewalk gap closure along Murray Avenue
  - Neighborhood street lighting and sidewalk and curb improvements within the Gilroy Neighborhood Revitalization Strategy Area
  - Designed to help offset residual project effects associated with emergency vehicle response delays (safety effects)

Key points of concern from partner; any preliminary feedback to directed questions:

- The Superintendent stated that Alternatives 1, 2, and 3 present DHAEs for the IOOF area of Gilroy due to the partial acquisition of the track/field at South Valley Middle School. Land in Gilroy is valuable and sought after, and HSR may need to seek imminent domain. In order for Gilroy schools to remain desirable for students and their families, they need to be accessible as well as have facilities like the track/field for school recreation activities. Right now, our school is surrounded by residences, Rebekah Children's Services, and Gilroy Prep.
- The Superintendent stated that Alternative 2 is the most problematic for the School District, particularly with respect to safety and school land acquisitions.
- The Assistant Superintendent stated that he disagrees with the finding that there are no DHAEs for Alternative 4. 100 mph train crossings present safety risks and mortal danger for students and elderly community members. These risks present DHAEs, even with the incorporation of quad gates and other project safety measures at intersections along the alignment.

Questions/Responses:

- Q: How often would a train pass through Gilroy during curfew hours (10pm-6am)?
    - R: The overall service schedule is projected for 6am to 12am. During peak hours, 6-9am and 4:30-7pm, seven trains would pass through per hour in each direction in roughly 4 to 5-minute intervals. Four to five trains would likely pass through after 9pm, including non-revenue trains.
- Q: Not all trains will stop in Gilroy, right?
    - R: Correct. Some express trains would only stop at locations such as San Francisco and San Jose.
- Q: Would widening of tracks go onto campus, and by how much?
    - R: Alternative 4 is at grade and would require some additional tracks. For Alternative 2, there is some encroachment onto the track/field at South Valley Middle School and a nearby park. The preliminary engineering drawing are in the Draft EIR/EIS, and we can provide you with the pages that contain details on acquisitions for each of the alternatives.
    - R: The plan sheets for the Preferred Alternative are available here (pages 24-27 for Gilroy) and was provided in the chat during the meeting: https://hsr.ca.gov/wp-content/uploads/docs/programs/san_jose_merced/Draft_EIRS_JM_V3-18_PEPD_Alternative_4_Book_4_A_Composite_Plan_Profile_and_Cross_Sections.pdf
- Q: Is Alternative 4 the Preferred Alternative?
    - Yes, currently. The Board will be making a final decision next year.
- Q: What does the traffic footprint look like around South Valley Middle School?
    - R: The IOOF crossing would still be available. Fencing would be along the ROW on both sides, and the intersection would also have quad gates, pedestrian gates, and warning devices.
- Q: Is the three-page list of Community Improvements a good summary to use for reference?
    - R: Yes, the Community Summary and Community Improvements are good resources that we would appreciate you feedback on.

Next Steps/Actions/Follow-up:

- Community Meeting: Tuesday September 28, 5:00-7:00PM
    - The District's outreach team will reach out to parent and school stakeholder groups via Square and other means for their participation in the meeting.
    - The meeting should include Spanish interpretation and a Spanish slide deck will be made available.
- By COB, Friday September 10
    - HSR Team to provide Gilroy USD with land acquisition details for Alternative 4. (Provided during the meeting.)

EJ PHASE 3 MEETINGS SEPTEMBER 2021 AFTER ACTION REPORT

Title of Event

Los Banos Unified School District

Date of Event

September 8, 2021, Start time (11:25) – End time (12:05)

Recorder of Event (Name)

CeCe Horbat

Participants/Attendees

- **Partner(s):**
  - Alejandra Garibay
  - Amer Iqbal- Assistant Superintendent
- **Staff:** Audrey Van, Cici Vu, Rich Walter, CeCe Horbat

Purpose of Event

- Meeting Objectives
  - Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements
  - Share Preliminary Conclusions
  - Gain feedback on directed questions
  - Address clarifying questions on meeting materials, desired feedback and conclusions
  - Update from meeting of last year

Key Notes

Key points on community-specific presentation

- Not at this time

Potential Community Improvements

- How partnership will be structured for implementing improvements.
- Management of park and related facilities is out of school district's purview; need to partner with Merced County on park.

Key points of concern from partner/community; any preliminary feedback to directed questions:

- None at this time

Questions/Responses:

- **Q: Window and other improvements to school facilities – how will implementation work? Does school pay and get reimbursed or does the school receive funding**
  - R: Partners would do the actual implementation and use the funds from the authority. Authority would not contract and do it. Authority would just provide funding.
    - Preliminary improvements can be forwarded and estimate was made previously and Los Banos USD can provide feedback on the improvements

Next Steps/Actions/Follow-up:

- **ICF: Send out preliminary improvements so the school district can see what the original**

estimate was for the windows (this week – by 9/10)
    - Send announcements to the school
- **Amer: Speak with lead parent groups and will check in with Volta Principal (TODAY)**
    - Possibly have a community café appearance
    - Could come into a board meeting
- **K&W: Follow up with Amer and Alejandra about parent outreach to families in SJV (1 week – 9/15)**

Updates from Internal Staff

- **Community meeting September 22nd from 5-7**
    - Cici Vu asked for a more connections to parent groups and Principal Thomas

Update from Los Banos USD

- school boundaries new of 2021 impacting families in different districts

Post Meeting Follow Up

- Rich (ICF): Recall notes Follow up with Merced County (Parks and Rec) via conference call to include Audrey, Rich and other authority staff to specific improvement (the potential new park)

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
City of San Jose
Date of Event
September 9, 2021, **Start 1:05** – **End time 2:30 pm**
Recorder of Event (Name)
CeCe Horbat
Participants/Attendees

- **City of San Jose**,
  - Brian Stanke, Rail Planning Manager, City of San Jose
  - Jessica Zenk, Deputy Director, Transportation Planning & Project Delivery
  - Stacey Lu, Stacey Lu, Engineer II, Department of Transporation
- **Staff Name**
  - Joey Goldman
  - Rich Walter
  - Bruce Fukuji
  - Boris Lipkin
  - CeCe Horbat

Purpose of Event

Meeting Objectives

- Explain/present on updates to EJ analysis, mitigations, benefits and community improvements
- Share preliminary conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Potential Community Improvements Presented (Key points on community-specific presentation)

- **San Jose Diridon**
  - *Alternatives 1, 2, and 3:*
    - Funding for Delmas Neighborhood streetscape improvements to help offset visual aesthetic effects of viaduct.
  - *Alternative 4:*
    - Noise insulation for certain residences along SR87 and I-280 helps to offset residual project noise effects.
- **Washington/Guadalupe/Tamien/Alma/Almaden**
  - *Alternatives 1, 2, and 3:*
    - Streetscape improvements along Goodyear Street, Humboldt Street, and Floyd Street to improve visual aesthetics.

        - Funding to support community art installations in the local community to improve visual aesthetics and a sense of community.
    - *Alternative 4:*
        - Noise insulation for residential buildings immediately adjacent to the east side of SR 87 to offset residual noise effects.
- **South San Jose**
    - *Alternatives 1, 2, and 3:*
        - Funding for Monterey Road Grand Blvd. landscaping improvements to help offset visual aesthetic effects of HSR structures.
    - *Alternative 4:*
        - Noise insulation for certain residences along 101 helps to offset residual project noise effects
        - Funding to City of San José for new pedestrian/bicycle overcrossings at Skyway, Branham, Chynoweth helps to improve safety.

Key points of concern from partner/community; any preliminary feedback to directed questions:

- **Gardner/Willow Glen**
    - Suggestion to specify/change Gardner/Willow Glen to Gardner/**North** Willow Glen
- **Alt 1-3 Comment**
    - City of San Jose looks forward to having landscaping/green space additions.
        - "That's a great idea (re: Monterey Road/Grand Blvd. landscaping). Would be ideal to have green infrastructure and trees as part of that."
- **Discussion regarding overcrossing versus undercrossing**
    - The Authority would prefer overcrossings as opposed to undercrossings.
    - Overcrossing details will be modeled off existing overcrossings (i.e., Xander's Crossing). Cost estimates exist but specific design work has yet to be done. ICF works with HNTB.
    - **City of San Jose**: City of San Jose followed up with the Authority to continue working on the MOU language regarding the implementation of the bike/ped crossings in S. San Jose.
- **Representative Involvement**
    - Boris/Morgan/Authority members have been working to give a briefing to representatives/councilmembers.
        - David Tran (staffer for Councilmember Raul Peralez), requested a briefing
- **VTA's Gardner Elementary Sound Wall (Highway 280)**
    - Slow 20+ year process with CalTrans.
    - The Authority looked to see if it could do sound walls on school property as a potential way to work with VTA.
    - Jessica Zenk forwarded contacts including Cindy Chavez and Jason Nesdahl (Jason.Nesdahl@vta.org). Jason is the VTA point-person for the sound wall project.
    - Takeaway: possible points of collaboration.

Questions/Responses:

- **Q: Will additional sound walls be implemented (See Alt 4: Noise Mitigation San Jose Diridon)?**

  - **R**: Instead of sound walls along freeway, there will be noise insulation installed in affected buildings. Sound walls will impact one or two stories of a building as opposed to building insulation, which can reduce noise for the entire building. However, noise barriers in the form of sound walls will be included in EIR/EIS but not for improvements.
  - **Discussion**: City of San Jose emphasized the importance of incorporating community feedback/involvement when implementing sound insulation. City of San Jose also referenced the BART Phase 2 Noise Abatement project for the Authority to look into.

- **Q: Why is the "reference community" selected to be all of the three counties.**
  - **R**: See PowerPoint slide 4. Threshold for reference communities is adjusted based on census data and income differentials. Income is adjusted based on where populations are geographically located.

- **Q: Displacement refers to DIRECT displacement, right?**
  - **R** (From Boris in chat pod): Yes, acquisition of property needed along the rail alignment will result in direct displacement of structures adjacent to HSR).

- **Q: Is there a commitment to a program office/community staff to ensure mitigation?** Concerned about low-income, disadvantaged people trying to navigate getting the sound insultation installed.
  - **R:** In reference to the noise improvements, the Authority would be responsible for the design, implementation, hiring of contractors, and outreach for noise improvements.
  - Jessica emphasized that it is important to utilize community connections to reduce the onerous impact on low income/communities of color and ensure equitable participation in the sound insulation program.

- **Q: Can you expand on next steps surrounding SS-MM4?** See 4A pg. 2 of materials on S. San Jose Meet HSR NorCal
  - **R**: Listed below are potential revisions to the final EIR/EIS:
    1. Revisions will continue to be modified and the evaluation is ongoing. Emergency response delay times will be monitored on a rolling basis. The Authority will continue to monitor and forecast how response times will be impacted over time. If response time increases significantly, the Authority will act accordingly (see Emergency Response Delay below).
    2. Initial funding will be allocated if fire station is needed. Funding will exist for the first 5 years.
    3. The Authority is looking into a monitoring system for at-grade crossings tied into fire and police dispatch to consider real time info. about gates being down (exists in Sugarland, Texas)
  - **Emergency Response Delay**: The adverse emergency response delays for Alternative 4 are related to increased gate down time at the at-grade crossings at Skyway Drive, Branham Lane, and Chynoweth Avenue. Adverse delays greater than the delay threshold could occur if the City of San Jose chooses to not implement the improvements included in proposed direct mitigation measure SS-MM#4 based on the construction funding and partial operational funding proposed by the Authority.

- **Q: How will the Authority implement community art improvements?** The City of San Jose looks forward to having community art improvements. Community artists add a lot of goodwill and potentially pay you back in spades.
  - **R**: In terms of implementing improvements, the Authority will deal with the funding side when it comes to art. Coordination of the art project would be the City's responsibility.

Next Steps/Actions/Follow Up:

- Boris:
  - Will work with City of San Jose to incorporate MOU language.
  - Will follow up regarding Councilmember briefings, specifically David Tran (staffer for Councilmember Raul Peralez).

    - Will loop in team members accordingly after receipt of emails on VTA-Gardner Elementary sound wall email chain from Jessica Zenk.
- Jessica/Boris will coordinate on a carwash plan
    - Boris review materials from Stacey and follow up regarding information on a project "preliminary review" request for a development at 32 Stockton (the carwash site).
- Upcoming Community Meetings | September (5 – 7 pm)
    - 13th Guadalupe Washington
    - 14th Gardner
    - 20th San José - Diridon
    - 23rd South San José

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
African American Community Services Agency EJ Meeting
Date of Event
Monday September 13, 2021, 2021, 2:30-3:15
Recorder of Event
Rickie Cleere
Participants/Attendees
• **Representatives:** Milan Balinton, Rebekah Melesse, Lavere Foster, Ariadna Luna • **Staff:** Morgan Galli, Rich Walter, Cici Vu, Rickie Cleere
Purpose of Event
• Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements • Share Preliminary Conclusions • Gain feedback on directed questions • Address clarifying questions on meeting materials, desired feedback and conclusions
Key Notes

Questions/Responses:

- **Q:** How did you determine that there was a need for this project?
    - R: The project need goes back to a statewide environmental assessment conducted in 2000. A general system framework first developed in 2005 included termini in LA and San Francisco as well as a station in San Jose, with plans for later expansion. In 2008, Proposition 1A was put on the ballot in support of partial project funding. Since the passing of Prop 1A, the Authority has been implementing it along with additional pieces of legislation concerned with the northern sections of the project. Per legislative oversight, the Authority prepares a business plan every 2 years which to routinely reevaluate project need. The 2020 business plan confirms the project's economic viability, projected ridership, and overall benefit. Over the years, a shared understanding of the need for alternative transportation has developed in California. High-Speed rail is an opportunity to modernize and augment the existing passenger rail system with a fully electric travel alternative to intrastate car and air travel. Most research on potential benefits have focused on ridership analysis and the provision of a more environmentally friendly travel alternative. They ridership analysis has involved travel demand projections for 2031-2040, which have demonstrated a need for costly highway and airport infrastructure improvements across California. The project would by provide an electric rail option that produces fewer emissions, promoting compliance with state carbon dioxide emissions reduction goals. We will send fact sheets and additional links to our website with further information.
    - R: Sent in chat:
        - Draft environmental report (April 2020): https://hsr.ca.gov/programs/environmental-planning/project-section-environmental-documents-tier-2/san-jose-to-merced-project-section-draft-environmental-impact-report-environmental-impact-statement/
        - Draft environmental justice analysis (April 2020): https://hsr.ca.gov/wp-content/uploads/docs/programs/san_jose_merced/Draft_EIRS_JM_V1-30_CH_5_Environmental_Justice.pdf

- Q: What is the project's anticipated completion date? Would low-income people be able to regularly ride?
    - Project construction is underway in the Central Valley and project operation is anticipated to begin in 2030. Expansion of project construction will begin as soon as funding become available. The full rail system may be complete by 2033, but this timeline is contingent on funding. There was an appropriation request before the legislature earlier this year and the legislature did not take action. The current bill (4.2) is still in bond and will be decided upon by the legislature in January 2022. In the meantime, the Authority is assessing how non-action will impact project delivery timelines across project sections. Regarding pricing and fares, the Authority expects the project to be competitive with airfare. Case studies in other regions across similar medium-range distances reveal a tendency for rail to outcompete airfare. The Authority and future operator will assess fares once service becomes closer to fruition.

- Q: Will the completed rail be electric-powered.
    - R: Yes.

Next Steps/Actions/Follow-up:

- In a follow up telephone call (9/13/21) with Lavere Foster to ensure understanding that HSR is planning to advance the improvements on the potential (vs. other considered) list, Lavere mentioned that he'd like to advocate that the measure to redevelop the Inez Jackson library be advanced on the potential list citing that it would serve as a sanctuary for the underserved community of San Jose from potential noise effects of the project. He indicated that many of the community members AACSA serves are unhoused or don't have stable homes and AACSA endeavors as an organization to provide a welcoming place of comfort to its members. Lavere will make sure AACSA submits a feedback survey to this effect.

- Community Meeting: Monday September 28, 5:00-7:00PM
    - **AACSA – Is there a need for Spanish Interpretation at this meeting?**
- Outreach Team to provide web resources with additional project information (below, sent in follow up communication):
    - HSR Website: https://hsr.ca.gov/
    - Fact Sheets (also attached)
        - General CA fact sheet: https://hsr.ca.gov/wp-content/uploads/docs/communication/info_center/factsheets/Connecting_California.pdf
        - Northern California Fact Sheet: https://hsr.ca.gov/wp-content/uploads/docs/communication/info_center/factsheets/Northern_California_Factsheet.pdf
        - SJ to Merced Preferred Alternative Fact Sheet: https://hsr.ca.gov/wp-content/uploads/2021/04/SJ_Merced_Project_Section.pdf
    - Business Plan: https://hsr.ca.gov/about/high-speed-rail-business-plans/2020-business-plan/
    - Draft environmental report (April 2020): https://hsr.ca.gov/programs/environmental-planning/project-section-environmental-documents-tier-2/san-jose-to-merced-project-section-draft-environmental-impact-report-environmental-impact-statement/
    - Draft environmental justice analysis (April 2020): https://hsr.ca.gov/wp-content/uploads/docs/programs/san_jose_merced/Draft_EIRS_JM_V1-30_CH_5_Environmental_Justice.pdf

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Guadalupe Washington Community Meeting
Date of Event
September 13, 2021, **Start 5:00** – **End time 7:00 pm**
Recorder of Event (Name)
Vidya Bhamidi
Participants/Attendees

- **Representative Name(s)**,
  - Brian Stanke, San Jose DOT
  - Elizabeth Figueroa, (CommUniverCity SJSU) Special Programs Manager
  - Hugo Meza (District Attorney's Office)
  - Kerry Duncan, Rep. Lofgren Staff
  - Rosalinda Aguilar (GW Neighborhood Association)
  - Stacey (CSJ)
  - Maricela Alcala Franco (Principal Washington Elementary)
  - Imelda Rodriguez (CommUniverCity)
- **Staff Name**
  - Cici Vu, Facilitator
  - Rich Walter, Presenter
  - Audrey Van, Presenter
  - Rachel Bickert, Tech Support/Webinar Manager
  - Vidya Bhamidi, Documentarian

Purpose of Event

Meeting Objectives:

- Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements
- Share Preliminary Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Key points on community-specific DHAE : Preliminary conclusions presented

- Potential disproportionately high and adverse effects (DHAE): Aesthetics and Visual Quality
- Visual and Noise Benefits: Reduced need for airport highway expansion and associated visual and noise effects. Helps to offset the adverse visual effects or noise effects.

- **Alternatives 1, 2, and 3:** Residual disproportionately high and adverse visual effects related to the elevated viaduct.
- **Alternative 4:** No disproportionately high and adverse effects.

Key points of concern from community; any preliminary feedback to directed questions:

- Impact on neighboring properties and unhoused populations
- Construction and operation related air pollution
- Timeline, details, and impact of construction
- Financial packages for businesses that will be impacted by construction

Questions/Responses:

- **Q:** A participant asked whether additional homes will be taken down on each side of the railroad tracks.
  - **R:** Only the two homes mentioned will be removed with Alt 4 (preferred alt), that too in Gardner/North Willow Glen

- **Q:** A participant asked about fossil fuels or air pollutant emissions
  - **R**: There will be diesel equipment during construction. But during operations, the train is electric so there won't be any emissions. There will be some emissions at the power plant, but the power plant is not in GW. Keep in mind that existing trains are presently operating on diesel, but Caltrain is electrifying its trains.

- **Q:** Is there a plan to mitigate those emissions?
  - **R:** In the EIR, we've looked at construction impacts as well as operational impacts. We also have some additional commitments working with the Air Districts. For example, HSRA is doing construction in Central Valley and incorporating all those mitigation measures in contracts with contractors. HSRA oversees this through a mitigation monitoring and enforcement plan.

- **Q:** What is the duration of construction of this project?
  - **R**: Overall is about 5 years where there are tunnels and 2-3 years where there aren't. Alternatives 1,2,3 will have more construction due to viaducts.

- **Q:** Could there be displacement to businesses during construction? Will parking be taken away?
  - **R**: We have requirements for impact avoidance and mitigation measures to make sure housing and businesses aren't negatively impacted.

- **Q:** How many community groups have you contacted?
  - **Cici:** We have contacted close to 300 community groups from San Francisco to Merced. Reached 200,000 community members in our EJ-focused outreach and engagement .General outreach has reached more.

- **Q:** A participant asked whether any structures will be erected in this community, because he is concerned about gang-related conflicts arising, graffiti, and the potential of related violence
  - **R:** The community art won't be on HSR structures, it will be on fencing. The intent is that it will be in other locations. Alts 1,2,3 have columns to hold up the viaduct – can follow up with specifics on whether these columns will be fenced off or open to public

- **Q**: A participant asked about sound walls in the community
  - **R**: There are no sound walls but will have to expand an existing rail bridge and create another bridge

- **Q:** What will be the impact on homeless populations? Does HSRA have plans to conduct a study?
  - **R:** For this community, the rail line follows Caltrain right of way so it will be Caltrain's responsibility. No plans to conduct our own study, will cooperate with CalTrans or Caltrain.
    - **Cici** adds that we've done on-ground outreach – we've done walks along the alignment where unhoused members are located, and have qualitative data

- **Q**: Clarification on any kind of start date?
  - **R**: The document says construction starting as soon as 2022, but doubtful that'll happen. We don't have funding and even if funding was identified tomorrow, our design is not finalized. It would still take several years.

- **Q:** Can you clarify the point about bridge widening in the area over Virginia St? Will there be any closure during the time when that work is being done?
  - **R:** Not aware of any road closures at this time. That section over the Guadalupe River is Valley Water's right of way.

- **Q:** A participant asked about slide 14: emergency response delays not having a circle
  - **R:** There is no station so there is no station traffic. There are impacts at the Diridon station for example, but those impacts don't reach the neighborhood. There are also no at grade crossings, so there are no operational delays for emergency response in this particular community.

Next Steps/Actions/Follow-up:

- Follow up with Hugo Meza regarding specifics on whether columns will be fenced off or open to public
  - RE Follow up High-Speed Rail - Question re Noise Barriers and Viaduct Columns in San Jose on Thursday, September 23, 2021 2:18 PM

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event

Rocketship Schools (Guadalupe/Washington Area) – Interested Parties

Date of Event

September 13, 2021 Start Time 10 am End Time 10:50 am

Recorder of Event (Name)

CeCe Horbat

Participants/Attendees

- **Representative Name(s)**
  - Courtney English – Principal English at Mateo Sheedy
    - Contact Information: 408-464-2472
- **Staff Name**,
  - Morgan Galli
  - Rich Walter
  - Cici Vu
  - CeCe Horbat

Purpose of Event

- Explain/Present on Updates to EJ Analysis, mitigations, benefits and community improvements
- Share preliminary conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Potential Community Improvements Presented

- Alternatives 1, 2, and 3:
  - Streetscape improvements along Goodyear Street, Humboldt Street, and Floyd Street to improve visual aesthetics.
  - Funding to support community art installations in the local community to improve visual aesthetics and a sense of community.
- Alternative 4:
  - Noise insulation for residential buildings immediately adjacent to the east side of SR 87 to offset residual noise effects.

Other improvements considered involving Rocketship Schools

- Rocketship Mateo Sheedy Elementary School play fields/landscaping
  - Benefits/Ranking: Ranking 3- safety, recreation, livability
- Rocketship Mateo Sheedy Elementary School circulation and safety improvements
  - Benefits/Ranking: Ranking 11- safety

Key points of discussion partner/community; any preliminary feedback to directed questions:

- Principal English expressed gratitude regarding transparency and inclusion in this update involving Rocketship Schools.
    - Principal English will provide an update at an upcoming school council meeting that meets with families and parents / parent groups active and interested in the project.

Next Steps/Actions/Follow-up:

- 9/13: Guadalupe Washington Community Meeting tonight 9/13 from 5-7 pm
    - Principal English will pass along invite to community stakeholders/ parent groups.
- 9/13: K&W forwarded meeting invite and flyer with zoom information for 9/13 Community Meeting.

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
City of Santa Clara
Date of Event
September 13th 2021 Start time 3 pm, End 4:25 pm
Recorder of Event (Name)
CeCe Horbat
Participants/Attendees

- **City of Santa Clara**
  - Jonathan Yee, City of Santa Clara Transportation Manager (Dennis Ng was previously in the position)
  - Michael Liw, Assistant Director of Public Works/City Engineer
- **Staff Name**, Outreach Team
  - Chris Diwa, HSR
  - Rich Walter, ICF
  - Joey Goldman, K&W
  - CeCe Horbat, K&W

Purpose of Event

Meeting Objectives:

- Explain/Present on updates to EJ analysis, mitigations, benefits and, community improvements
- Share Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback, and conclusions

Key Notes

Key points on community-specific presentation

- **N/A**

Key points of concern from partner/community; any preliminary feedback to directed questions:

- **Discussion/Point of concern**: The City of Santa Clara shared that excluding some of the proposed improvements in the recent analysis was surprising and disappointing. City staff mentioned that this might not go over well with the community, and might be a point of concern resulting in pushback and loss of faith from the audience.
  - Presenters encouraged City staff to relay this feedback in the survey. The Authority wanted to leave this opportunity open-ended when first accepting improvement (formerly enhancement) proposals. However, the Authority's programmatic direction has changed, and through the survey, if there are other improvements the City wants to advocate for or add, they will be read.

- **Explanation of Operational Traffic (see *Summary of Potential Effects* dot table 4. A in Santa Clara/North San Jose Materials)**
    - The City of Santa Clara suggested explaining the long-term versus short-term impacts of operational traffic and why this part of the table is blank.

Questions/Responses:

- **Q: We had many meetings last year, and it appears there are no actual transportation impacts. How are we reconciling the work that we did in the fall of 2020? Previously the discussion was open-ended. What's going on now/how did we end up here? Additionally, how do we explain to people that last year's feedback is not moving forward?**
    - **R:** This year's direction (in 2021) was to look at relationships between effects and improvements more closely and to have a narrower scope. This moved the City of Santa Clara's improvements to "other improvements." This new analysis took the existing feedback and incorporated what they could to offset any residual effects. There are general benefits to the project. Currently, the Authority would like to hear feedback on the methodology, conclusions, and propositions presented by the Authority.
    - In 2019, the City of Santa Clara proposed a bike/pedestrian plan. Back in 2019, the direction broadly looked at community improvements. At that time, no decisions were final, and the Authority wanted to collect information on effects and benefits on a general level.
- **Q: How did the Authority designate the current division of the project? It appears that parts of Santa Clara fall into both project sections. Is there different staff for the two sections?**
    - **R**: The Authority split up the Northern California Section into two parts: San Francisco to San Jose (FJ) and San Jose to Merced (JM). While they are two separate teams, the review process is similar, and information overlaps.
    - Scott Blvd. is where the overlap roughly begins. In areas of overlap, the viaduct impacts both the JM and FJ sections. Within the station design, a viaduct might be in Santa Clara. However, the Authority needs to analyze and capture the whole impacted area in the Santa Clara region, resulting in the overlap. Overlap exists from Scott Blvd. to West Alma in San Jose and overlaps the Tamien Caltrain station.
    - The same analysis and most of the team have close communication with the larger Northern California team. Teams communicate with each other and flag items to the other team when necessary. Timelines of FJ and JM are about a month apart (range from 2-3 months). The JM section of the project is likely to advance to the final EIR/EIS before the FJ section.
- **Q: How does the Authority classify what is a DHAE?**
    - **R:** The Authority's definition of DHAE is as follows: "The focus of the environmental justice analysis is to determine whether the project would result in high and adverse effects that disproportionately affect minority populations or low-income populations." This definition looks at census data and then looks at income or race/ethnicity demographics compared to the rest of the study area and determined on an end-to-end basis. This methodology for determining Disproportionately High and Adverse Effects (DHAE) is identical to the Draft EIR/EIS.

Questions concerning alternatives 2 and 3

- **Q: Speaking from the perspective of community members after looking at the *Summary of Potential Effects* dot table (see table 4. A in Santa Clara/North San Jose Materials). What can be done to offset impacts in alternatives 2 and 3?**
    - **R:** Currently, the Authority sees that the offsetting value of project benefits are general transportation, noise, and visual benefits. The only potential community improvement included is under alternative 4.

  - If there is a disagreement about the offsets to alternatives 2 and 3, think of this prompt when giving feedback: Does the community have feedback on whether they agree with the Authority's perception of out-of-kind improvements? Are there additional ways to offset impacts or improvements that benefit the community even if they are not "directly" related? If so, the Authority would like to hear.

- **Q: Regarding alternatives 2 and 3 (parks): What are the specific potential effects and why are they not considered high and adverse? What is happening to offset these potential effects?**
  - **R**: The Summary of Potential Effects dot table states in the footnotes for parks in alternatives 2 and 3- "[2] Limited partial acquisitions at Reed Street Dog Park and Reed and Grant Streets Sports Park."
  - The Authority's updated analysis for alternatives 2 and 3 requires limited partial acquisition that can be mitigated by the Authority, avoiding DHAE status. In 2019, the City of Santa Clara provided feedback regarding impacts to these parks via a comment letter incorporated into the Authority's updated analysis and revisions.

General Project Questions

- **Q: How are you tailoring your outreach?**
  - R: Outreach is tailored to interested parties, implementing partners, and community stakeholders. All those invited to meetings have had some involvement in the high-speed rail project.
  - The City of Santa suggested reaching out to the communications department at the City, but the Authority described a more tailored approach.
- **Q: How have these meetings and this process been going with other members of the community?**
  - **R**: The Authority first met with the City and will continue to meet with interested parties and other stakeholders. The Santa Clara community meeting takes place on September 15th from 5-7 pm. The following organizations have been invited to the community meetings: Charities Housing/HomeSafe, Next Door Solutions, Council on American Islamic Relations (CAIR), HomeFirst, ImmigrantInfo.org, Muslim Community Association, Santa Clara County Emergency Assistance Network, Santa Clara County Refugee and Immigrant Forum, South Bay Islamic Association (SBIA).
- **Q: What caused the change to update the analysis?**
  - **R:** A shift in policy resulted in a more refined analysis. The perspective of what defines *out-of-kind* also changed. What was considered as an impact to the project had been resolved or mitigated, decreasing residual impacts.

Closing Remarks

- Authority: The Authority has been working on these documents since 2014/2015. Over the years, personnel, policy, and methodology changed. Our efforts in 2019-2020 allowed us to have a set of ideas and see what was feasible for the Authority. Part of this environmental process resulted in adjustments and mitigations. Some of the adjustments and mitigations resolved previous DHAEs. The Authority looks forward to community participation to help influence updating Chapter 5 for incorporation into the final EIR/EIS.

Additional Notes

- The City of Santa Clara is also working with BART regarding new station construction.
- The City of Santa Clara submitted a letter of support for the no-viaduct alternative and met with Dave Shpak and Boris Lipkin in past meetings.

Next Steps/Actions/Follow-up:

- Santa Clara Community Meeting (9/15)

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Gardner Community Meeting
Date of Event
Tuesday September 14, 2021, 5:00 – 6:20 pm
Recorder of Event (Name)
• Jennifer Vazconcelo
Participants/Attendees

• **Representative Name(s)**
  ○ Brian Stanke, San Jose Department of Transportation
  ○ Stacey Lu, City of San Jose
  ○ Kerry Duncan, Rep. Lofgren Staff
  ○ Kristine Nguyen, GoKids
  ○ Ben Leech, Preservation Action Council of San Jose
• **Staff Name**
  ○ Cici Vu, Facilitator
  ○ Rich Walter, Presenter
  ○ Chris Diwa, Presenter
  ○ Rachel Bickert, Tech Support/Webinar Manager
  ○ Jennifer Vazconcelo, Documentarian
  ○ Victor Hernandez, Spanish Interpreter

Purpose of Event
• Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements • Share Preliminary Conclusions • Gain feedback on directed questions • Address clarifying questions on meeting materials, desired feedback and conclusions
Key Notes

Key points on community-specific presented
• Summary of Potential effects in the Gardner/Willow Glen community
  ○ Preliminary conclusion takes into consideration direct mitigation, project benefits and potential community improvements.
  ○ Alternatives 1, 2, 3, and 4: will have effects due to Aesthetics and Visual Quality, but effects not considered high and adverse.
  ○ Alternative 4:
  ▪ Potential disproportionately high and adverse effect related to operational noise effects.
  ▪ Potential operational noise effects not disproportionately high and adverse for the entire project section, but a particular community may still be affected.
  ▪ Effects in parks, construction traffic/bus transit delay and operational traffic but these effects are not considered high and adverse.

- Effects shown are after consideration of direct mitigation, but before consideration of the offsetting value of project benefits or community improvements.

Key points of concern from partner/community; any preliminary feedback to directed questions:

- Displacements due to expansion of the right of way
- Impacts on protected historical resources

Questions/Responses:

- **Q:** Do you have specific information on what parcels in the neighborhood would potentially be impacted with an expanded right of way?
  - **R:** There is a list of all the parcel numbers with the displacements in the DEIR/EIS appendix. The third volume of the Draft EIR/EIS is a preliminary engineering drawing; those include identifying the temporary right of way and the permanent right of way. The displacements are at the end of the neighborhood, closer to SR87 along the tracks; we're adding a track to the existing routes to handle the capacity; that is why we had to widen the right of way, which would require the acquisition of two residences in the neighborhood.
- **Q:** We have been tracking what is proposed in the DEIR/EIS regarding potential impacts to the Diridon station as a historic resource; the discussion tonight didn't seem to address the historic resources. As this process evolved, when is the next leverage point to discuss what is being considered in accommodating the station on-site?
  - **R:** The DEIR/EIS has a detailed analysis of the effects on cultural resources, like the Diridon station. We haven't identified any cultural resource impacts that would fit those definitions in the environmental justice analysis. Still, since this is a federal project, we also consult with the State Historic Preservation Office.
- **Q:** Does the analysis look at specific grade crossings? I know that there is at least one grade crossing, is that proposed to stay a grade crossing, or is there a plan to close off that street to avoid the grade crossing, or Virginia converts into Drake?
  - **R:** Within Gardner Northland, Virginia is turning into Drake, and then across on the other side is Azariah. With alternative four, which is the at grade, those are proposed to remain at grade crossings. At the grade crossing, we're going to add quad gates and fencing where needed; right now, there are two gates; the quad gates help prevent anybody from going around the gates. We're also going to be adding median channelization to stop people from going in the opposite lane. Some vehicle detections are required in the entrances to prevent cars while gates are coming down from getting trapped.

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Santa Clara Community Meeting
Date of Event
September 15, 2021, **Start 5:10** – **End time 6:25 pm**
Recorder of Event (Name)
Vidya Bhamidi
Participants/Attendees

- **Representative Name(s)**, Title
  - Aparna Dhoraje, Next Door Solutions
  - Michal Healy, Santa Clara Unified School District
  - ML Work Iphone (unknown)
- **Staff Name**
  - Joan Issacson, Facilitator
  - Rich Walter, Presenter
  - Chris Diwa, Presenter
  - Rebecca, Tech Support/Webinar Manager
  - Vidya Bhamidi, Documentarian

Purpose of Event

Meeting Objectives:

- Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements
- Share Preliminary Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Key points on community-specific presentation
- Visual and Noise Benefits
- Noise insulation for certain residences
- Residential and Business Displacements
- Construction Impacts

Key points of concern from community; any preliminary feedback to directed questions:
- No feedback

Questions/Responses:
- **Q:** Where is the link to the actual improvements to Santa Clara roads and crossings located?

- **R:** There are descriptions of changes to roadways, especially for Alt 2 and 3 that have more roadway changes. There isn't an engineering design, those are at a conceptual level. We can follow-up via email.
  - Draft environmental justice analysis (April 2020): https://hsr.ca.gov/wp-content/uploads/docs/programs/san_jose_merced/Draft_EIRS_JM_V1-30_CH_5_Environmental_Justice.pdf
  -

Next Steps/Actions/Follow-up:

Follow-up via email with Michal Healy (mhealy@scusd.net)

- Re: Followup on location of Potential and Other Community Improvements in Santa Clara on Fri, Sep 17, 2021 at 5:20 PM

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Santa Clara County Agencies
Date of Event
September 15th 2021 Start time 2:05 pm, End 2:50 pm
Recorder of Event (Name)
CeCe Horbat
Participants/Attendees

- **City of Santa Clara**
  - Jeremy Farr, Parks and Recreation
- **Staff Name:** Audrey Van, Rich Walter, Joey Goldman, CeCe Horbat

Purpose of Event

Meeting Objectives:

- Explain/Present on updates to EJ analysis, mitigations, benefits, and community improvements
- Share Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback, and conclusions

Key Notes

Key points on potential community improvements in community-specific presentation

- Jeremy Farr from SCC Parks and Rec received slides and materials from South San Jose and the City of Morgan Hill communities. See previous feedback from 2020

S. San Jose

- Alternatives 1, 2, and 3:
  - Funding for landscaping improvements along Monterey Road (as part of the City of San Jose Grand Blvd. initiative) to help offset visual aesthetic effects of HSR structures.
- Alternative 4:
  - Noise insulation for certain residences along 101 helps to offset residual project noise effects
  - Funding to the City of San Jose for new pedestrian/bicycle overcrossings at Skyway, Branham, Chynoweth helps to improve safety.

City of Morgan Hill

- Alternatives 1 and 3:
  - Funding to the City of Morgan Hill to implement trail and park improvements under the viaduct to offset visual aesthetic effects
- Alternative 2:
  - Funding to implement complete streets improvements along Railroad Avenue to offset visual aesthetic effects.
  - Partial funding for affordable housing to offset residential displacement that cannot be relocated locally based on the housing market
- Alternative 4:

- Noise insulation for residences along 101 helps to offset residual project noise effects

Key points of concern from partner/community [none shared]; any preliminary feedback to directed questions:

- **No DHAES under the new analysis impacting SCC Parks and Rec in S. San Jose or City of Morgan Hill**
  - Other improvements impacting parks and recs include the following
    - S. San Jose
      - Coyote Creek Trail-Fisher Creek Trail Connection (ranked 5)
    - City of Morgan Hill
      - Coyote Creek low-flow crossings replaced with bridges
      - Perry's Hill staging area, Coyote Creek Parkway in Hellyer County Park
      - Llagas Creek Trail

- The only DHAEs impacting parks are in the City of Gilroy

- Jeremy Farr has experience with NEPA and appreciated the meeting. Jeremy understands needing to move previously discussed improvements to other improvements. Jeremy also shared reflections that many of these DHAEs don't impact these urban area communities. This reflection was a double-edged sword as many of these parks do not serve residents living in the identified dense urban areas.

Next Steps/Actions/Follow-up:

- City of Santa Clara Community Meeting 9/15
- Morgan Hill Community Meeting 9/21
- S. San Jose Community Meeting 9/23

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Interested Party: Gavilan College
Date of Event
September 16, 2021, 4 pm – 5 pm
Recorder of Event (Name)
Henry DeRuff
Participants/Attendees

Gavilan College

- **Susan Sweeney**, Interim Dean of Student Success and Workforce Pathways
- **Linda Bernabe**, Interim Director of Community and Educational Pathways
- **Not Present:** Jan Chargin, Denee Pescarmona, Kathleen Rose, Lisa Scott (who we met with in Phase 2)

Outreach Team

- **Rich Walters**, ICF
- **Audrey Van**, HSR
- **Cici Vu**, K&W
- **Henry DeRuff**, K&W

Purpose of Event

The event purpose was to:

- Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements
- Share Preliminary Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions
- Focus in on informing the College about how the updated EJ analysis impacted the previously proposed work force development community improvement measure.

Key Notes

General points of observation:

- Susan and Linda were *briefed* on the topic, but both live in Gilroy; they had not read the materials. Dr. Rose and Denee, who attended previous meetings, were not in attendance.
- Because we met with staff new to the project, Cici & Rich gave a general overview/history of the project due to lack of prior knowledge
- Additional mention: considered additional job training at Gavilan (not on short list at present for EJ process because not a close relationship to project effects – not a lot of job loss; HSR does have a partnership with skilled craft unions, didn't want to double efforts; also not part of DHAEs)

Stakeholder response:

- Impressed with the project benefits and how it would positively impact travel.

- Clearly understood and reiterated that work force development as a community improvement measure is not on the "potential" community improvements list

Questions/Responses:

- **Q (Susan)**: This is a nice opportunity for *travel*, but not for what we asked for, and in particular for the workforce training piece. What are the next steps for Gavilan?
    - **R:** There are the three options that include Gavilan, although they are not necessarily likely: low-income housing, bike lanes, and job training. Alternative 2 involves funding for affordable housing, which could include funding for Gavilan low-income housing. I'd encourage you to provide feedback on whether any of those three are connected to the effects we've identified. If you have questions about relationships with unions, we can put you in contact with the members of our team who have worked on that. Additionally, please fill out the survey we've sent, call/email us, or come to the community meeting on 9/28. If students or other members of the Gavilan community are interested, please encourage them to attend.
- **Q (Linda):** We have a campus in Hollister. Will there be any impact or connection to the campus in Hollister?
    - **R:** Hollister is pretty far away from the alignment, so we haven't explored that yet.

Next Steps/Actions/Follow-up:

- By **9/17**: The Outreach team will send a thank-you email with relevant materials & links.

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
San Jose Unified School District: EJ High-Speed Rail Implementing Partner Meeting
Date of Event
Thursday September 15, 2021, 11:00am
Recorder of Event
Rickie Cleere
Participants/Attendees
• **Representative:** Ben Spielberg – Manager of Strategic Projects • **Staff:** Chris Diwa, Rich Walter, Cici Vu, Rickie Cleere
Purpose of Event
• Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements • Share Preliminary Conclusions • Gain feedback on directed questions • Address clarifying questions on meeting materials, desired feedback and conclusions
Key Notes
Key points on community-specific presentation • SJ USD will consult its Director of Procurement for input on potential design elements. Their staff can think more about implementation once the funding is committed, with enough lead time. • The Authority invites input on project direction from implementing partners as long as it works to address noise impacts. **Questions/Responses:** • Q: From the District's perspective, Gardner Elementary School is most impacted. When SJ USD met with Cici Vu and Cathy Paskin 2 years ago, we developed and provided a list of ideal measures. SJ USD wanted to know what the projected funding would be for the Gardner School mitigation since the District does not have sufficient funds to implement. I appreciate the Authority's point-for-point approach to mitigating direct project directs, but it would be ideal if indirect impacts were also addressed. SJ USD will defer with the City of San Jose and the Authority on the measures that are moved forward. o R: The improvement offsets the residual impacts of the project after mitigation. Initially, Gardner Elementary had no noise improvement, only a parking and circulation improvement. The $588k projected funding for the improvement would be for barriers on the school property, adjacent sidewalk, and/or on the north side of the school on Williams Street. The cost estimate for our concept was based on a 600-feet long and at 14 feet high structure at $70 per square foot. The actual barrier will be less than 600 feet and will likely cost less than the estimate. There is also the possibility for building and window treatment for structures on the north side of the school. Site assessment would be needed on school property and along Caltrans ROW.

- Q: Due to District understaffing and the need to focus on core school services, our team will not likely enter into the process until implementation is near, what is the likely timeline for having design and implementation discussions and the use of the improvement funds?
    - R: The Authority will make a decision in its Record of Decision (ROD) in March 2022, however, project funding has not yet been secured. The timing for the improvements is contingent on securing funds, which is still uncertain. At the present time, the designs are more conceptual. The policies are going to be adopted as mitigations post ROD, and interaction with implementing partners has not yet been planned. There will need to be time to refine concepts and establish a funding timeline for planning, design, and construction. We want to know whether SJ USD would be supportive of the potential improvements. We will coordinate funding through an agreement with our implementing partners. If there are concepts you want or any concerns that you have, let us know. If there is any qualitative feedback from the school Principal, let us know.
- Q: What is the approval or audit process on reporting the use of improvement funds?
    - R: Because the improvement will be funded as a mitigation, it would have to result in noise reduction for school users. This would be ensured during design, and the Authority will conduct follow up reporting to confirm that the funds are meeting their purpose.
- Q: I'll consult our team for any other suggestions before the comment period deadline. Would feedback on soundwalks and insulation in the school cafeteria be helpful at this time?
    - R: Conceptual feedback would help, and any feedback on potential ways to address noise would be useful. We are currently creating an improvement profile and cost estimate in the EIR. Input could also inform subsequent post ROD discussions around advancing concepts further.
- Q: Should we continue to use the initial price estimate for reference in our feedback?
    - R: Any proposed costs in your feedback would need to be appropriately connected to a concept.

Next Steps/Actions/Follow-up:

- Once funding is allocated
    - The authority will return to coordinate with the school district on improvement implementation details.

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Franklin McKinley School District
Date of Event
September 17th, 2021, Start 1:00 pm – End time 2:15 pm
Recorder of Event (Name)
CeCe Horbat
Participants/Attendees

• **Franklin McKinley SD Staff**
  ○ Juan Cruz, Superintendent for Franklin McKinley
  ○ Jason Vann, Assistant Superintendent for Franklin McKinley
• **Staff Name**
  ○ Joey Goldman, Rich Walter, Chis Diwa, CeCe Horbat

Purpose of Event
Meeting Objectives • Explain/present on updates to EJ analysis, mitigations, benefits and community improvements • Share preliminary conclusions • Gain feedback on directed questions • Address clarifying questions on meeting materials, desired feedback, and conclusions
Key Notes

Potential Community Improvements Presented (Key points on community-specific presentation)
• **South San Jose**
  ▪ Funding for Monterey Road Grand Blvd. landscaping improvements to help offset visual aesthetic effects of HSR structures.
  ○ *Alternative 4 (at grade crossing):*
  ▪ Noise insulation for certain residences along 101 helps to offset residual project noise effects
  ▪ Funding to City of San José for new pedestrian/bicycle overcrossings at Skyway, Branham, Chynoweth helps improve safety.
• **Washington Guadalupe**
  ○ *Alternatives 1, 2, and 3:*
  ▪ Streetscape improvements along Goodyear Street, Humboldt Street, and Floyd Street to improve visual aesthetics.
  ▪ Funding to support community art installations in the local area to improve visual aesthetics and build a sense of community.
  ○ *Alternative 4:*
  ▪ Noise insulation for residential buildings immediately adjacent to the east side of SR 87 to offset residual noise effects.
Key points of concern from partner/community; any preliminary feedback to directed questions:
• Areas of concern in Washington Guadalupe for Franklin-McKinley
  ○ Captain Jason M. Dahl Elementary School

- Lairon College Preparatory Academy

Questions/Responses:

- **Q: To avoid delays for emergency vehicles, what is the viability of under-the-train track options for car traffic?**
  - **R:** There is a trade-off in the San Jose corridor near Monterey Rd crossings. Due to the City's 2040 "Road Diet" Proposal, congestion and slower traffic effects occur, regardless.
  - Preferred Method
    - Current alternatives propose viaducts as they are most cost-efficient and do not impact traffic. The Authority's preferred alternative is Alternative 4.
    - The Authority explored an option parallel to 101. However, the Authority did not pursue this option due to significant displacements and curvature not ideal for high-speed rail.
  - Other methods explored
    - Tunnels/Ferry Trenches: In the beginning, tunnels and ferry trenches were ruled out early in the analysis due to cost. Tunneling solves the issues of traffic congestion; however, the cost excluded this avenue. Additionally, Downtown San Jose considered below-ground tunneling. However, high groundwater and intractability halted this option. The challenge with San Jose's possible trenches required construction ramps costing hundreds of millions of dollars. At times, trenches can be cost-efficient. However, changing the elevation of roads and rail lines requires more land and money to complete.
    - Below tunnels for cars- The challenge in south San Jose is next to Monterey Road. Tunnels for cars would require pushing down Monterey Road and constructing ramps that cost hundreds of millions of dollars. Estimates are $400+ million to $1 billion to do 3 tunnels. The closest alternative similar to the undercrossing mentioned is Alternative 2.
  - Current at-grade crossings
    - San Jose: 5 crossings
    - South San Jose: 3 crossings
    - San Jose Diridon: 2 crossings
- **Q: How will the S. San Jose DHAEs under traffic congestion impact our community?**
  - **R**: The document's reference for Guadalupe Washington contains additional figures to show where traffic effects occur after mitigation in areas south of Capitol Expressway. Specifically, south toward Skyway and Chynoweth has more significant future impacts. The Authority expressed that this will not impact commuters north of the areas listed above and shouldn't be an issue until closer to Diridon station. The portion of the Monterey Corridor that is impacted is between Skyway and Blossom Hill.
  - Franklin-McKinley administrators expressed concern about Monterey Rd.'s already high traffic congestion for Lairon, Dahl, and Franklin Elementary (located on Tully Rd.) – schools within the district. Additionally, Franklin-McKinley is worried about traffic impacts as the district constructs a new school.
- **Q: What is the current timeline for review?**
  - **R**: The Authority looks to have a decision to propose to the board by February/March of 2022 to select one of the 4 alternatives. The proposal brought forward in February/March allows for a 30-day public comment period.

Actions/Next Steps/Follow Up

- *Draft Environmental Impact Report/Environmental Impact Statement (Link to full EIR/EIS)*
  - Section 3.2 Transportation describes the various types of transportation profiles/traffic analysis
- Provided links for Washington Guadalupe Materials (see thank you email/slide deck)
- Upcoming Community Meetings | September (5 – 7 pm)
  - 23rd South San José

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
SJ Diridon Community Meeting
Date of Event
September 20, 2021, **Start 5:00** – **End time 6:15 pm**
Recorder of Event (Name)
Vidya Bhamidi
Participants/Attendees

- **Representative Name(s)**, Title
  - Brian Stanke, San Jose DOT
  - Jason Kim, VTA
  - David Tran, CSJ District 3
  - Huascar Castro, Silicon Valley Rising
  - Kerry Duncan, Assembly Member Zoe Lofgren, CA-D 19th District
  - Greg Felix, Delmas Park Neighborhood Association
  - Stacey Lu, CSJ DOT
- **Staff Name**
  - Joey Goldman, Facilitator
  - Rich Walter, Presenter
  - Bruce Fukuji, Panelist
  - Rebecca, Tech Support/Webinar Manager
  - Vidya Bhamidi, Documentarian

Purpose of Event

Meeting Objectives:

- Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements
- Share Preliminary Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Key points on community-specific presentation

- Alternatives 1, 2, and 3: Residual disproportionately high and adverse visual effects related to the elevated viaduct.
- Alternative 4 noise effects

Key points of concern from community; any preliminary feedback to directed questions:

- Housing and business displacement
- Other community improvements considered
- Reasons for Alternative 4 being preferred
- Noise impacts

Questions/Responses:

- **Q:** An attendee asked about the difference in horn blows for at-grade versus elevated alternatives.
  - **R:** There are three locations where horns would be blown relative to Downtown SJ and nearby – at the station, at-grade crossings and also at West Virginia before it turns into Drake.
  - **R** gave a brief overview of the technical report that provides more details: Volume 2, Section 3.4-A of the EIR/EIS
    - Link was shared in chat: https://hsr.ca.gov/wp-content/uploads/docs/programs/san_jose_merced/Draft_EIRS_JM_V2-16_APP_3.2-A_Transportation_Data_Roadways_Freeways_Intersections.pdf

- **Q:** An attendee asked where they could find details about specific intersections for their neighborhood. Their concern was related to noise effects.
  - **R** gave a brief overview of the comprehensive noise analysis (Volume 1, Section 3.4 of the EIR/EIS)
    - Link was shared in the chat: https://hsr.ca.gov/programs/environmental-planning/project-section-environmental-documents-tier-2/san-jose-to-merced-project-section-draft-environmental-impact-report-environmental-impact-statement/

- **Q:** An attendee asked whether there was a difference between Alt 4 vs Alt 1,2,3 when it comes to noise. They asked for more information about at-grade versus elevated alternatives.
  - **R** explained that Alternatives 1, 2 and 3 are all elevated on a viaduct in the area and don't have any at-grade crossings. They are on a dedicated viaduct track that is separate from the station area. They will still have some minimal noise of a moving train, likely along with sounding some warning as it approaches stations. But overall, they have less noise effects.
  - **R** gave a brief overview of Chapter 2, Volume 1 of EIR EIS – at grade vs elevated
    - Link was shared in the chat: https://hsr.ca.gov/wp-content/uploads/docs/programs/san_jose_merced/Draft_EIRS_JM_V1-08_CH_2_Alternatives.pdf

- **Q:** An attendee asked about the potential displacement, both residential and commercial. They also asked about relocation assistance.
  - **R** gave an overview of the Community Impacts Assessment and the Draft Relocation Impact Report. He explained that an analysis of residential and business displacement was conducted for the different alternatives in the different sections. The analysis differentiates between the effect of relocating locally vs. having to move out of the community. It was found that there was adequate market availability for relocation within the community without needing to move far out.
  - **R** explained the difference between acquisition assistance and relocation assistance.
  - **R** gave a brief overview of the socioeconomic section of the EIR/EIS – Volume 1, Chapter 3, Section 3.12.

- Link was **not** shared in the chat: https://hsr.ca.gov/wp-content/uploads/docs/programs/san_jose_merced/Draft_EIRS_JM_V1-20_CH_3.12_Socioeconomics_Communities.pdf
- **B** gave a brief overview of relocation assistance
- Link shared in chat: https://hsr.ca.gov/programs/private-property/

- **Q:** An attendee asked whether there is a frontrunner out of the four alternatives.
  - **R**: In summer 2019, the Authority went through a process wherein they brought the preliminary review of the environmental effects as well as community input to the Board. Alternative 4 was identified as the preferred alternative. By law and by our process, we don't make any final decision until the environmental review is complete because we go through a process of taking comments and then the Board makes the final decision. The final will be decided by Q1 2022. Still, Alternative 4 is the front runner.

- **Q:** Given that Alternative 4 is the only alternative that doesn't go over I-280 and SR 87, is that a big push/driver for it to be the preferred alternative?
  - **R**: There are a bunch of trade-offs between the alternatives, best expressed in Volume 1, Chapter 8 of the EIR/EIS.
    - Link shared in chat: https://hsr.ca.gov/wp-content/uploads/docs/programs/san_jose_merced/Draft_EIRS_JM_V1-33_CH_8_Preferred_Alternative.pdf
  - In this community, Alternative 4 being mostly at-grade and inside the existing railroad corridor. As a result, it has nowhere near the amount of displacement or disruption during construction as the others. For Alternative 4, a lot less land is required and it is the lowest cost alternative.
  - As they go into the San Joaquin Valley, all the alternatives end up on the same alignment, so there aren't any differences there.

  - **Q:** An attendee asked Rich to shed some light on the "Other Improvements Considered" ranking on page 2 of the Community Improvements Document that was uploaded to MeetHSRNorCal.
  - **R:** In 2020, we evaluated 100 different improvements based on criteria: benefit intensity, relative number of beneficiaries, practicability, defined project or action, satisfying Authority obligations, defined roles and responsibilities, evidence of agreement, and cost-effectiveness.
    - **R** went over each improvement in the "Other Improvements Considered" ranking on page 2
    - Some of the people involved in this outreach were involved in that process as well, so some of these were their ideas. This is to provide them feedback of where those are at this point.
    - We are focusing on noise because it's the only Disproportionately High and Adverse Effect (DHAE) of Alternative 4. We are taking feedback on our methodology and approach, but right now we don't have those other improvements on our list because they don't have noise effects.

Next Steps/Actions/Follow-up:

- Follow-up with Huascar about relocation assistance
  - [Follow up] High-Speed Rail - Question re Relocation Assistance, **sent:** Wednesday, September 29, 2021 3:31 PM

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Morgan Hill Community Meeting
Date of Event
September 21, 2021, 5-7pm
Recorder of Event (Name)
Henry DeRuff
Participants/Attendees

External Attendees

- **Kerry Duncan**, Staffer for Congresswoman Lofgren

Staff

- **Morgan Galli**, **Rachel Bickert**, & **Kelsey Shockley** HSR
- **Rich Walter**, ICF
- **Joan Isaacson** & **Henry DeRuff**, Kearns & West
- **Kimberly Larios**, OnPoint Language Solutions

Purpose of Event

- Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements
- Share Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Key points on community-specific presentation

- Kerry Duncan was the lone participant; we answered her questions and showed the community-specific slides.

Key points of concern from partner/community; any preliminary feedback to directed questions:

- Kerry expressed interest in learning the feedback from other meetings to inform the Congresswoman.
- She was also interested in the general attendance of these meetings, how people got access to them, and how the materials were being shared.

Questions/Responses:

- **Q: Who did you reach out to? (Kerry Duncan)**
  - **R:** We sent the invitation to 56 people, as well as reaching out to Immigrantinfo.org, CARE, SCC Emergency Assistance Network, SCC Refugee and Immigrant Forum, and Voices Charter School specifically. (Henry)
- **Q: I know there's a feedback survey. Was there a target number of responses? (Kerry Duncan)**
  - **R:** There's no specific target. (Rich)

- **Q: Is that feedback survey, and the materials password-protected, so only people with the password can access? (Kerry Duncan)**
    - **R:** Correct, although we know that people pass along the materials. (Rich)

Next Steps/Actions/Follow-up:

- By **9/22**: The Outreach Team **will send materials & Thank You note.**
- By **9/22**: Check with Rich about **what feedback to share with Kerry/the Congresswoman.**
- By **9/22**: Check with Rich/Cici Vu about **whether to share information about the meeting with City Officials.**

Key Notes
Key points of concern from partner; any preliminary feedback to directed questions: • N/A **Questions/Responses:** • N/A **Next Steps/Actions/Follow-up:** • None

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Supportive Housing and Homeless Services EJ HSR Update
Date of Event
September 22, 2021 Start time 4:05 End time 5:20 pm
Recorder of Event (Name)
CeCe Horbat
Participants/Attendees

- **Representative Name(s)**,
  - Michelle Covert, Housing and Homeless Concerns Coordinator at County of Santa Clara
- **Staff Name**,
  - Rich Walter (ICF), Greta Brownlow (ICF), Bruce Fukuji (HSR), Cici Vu (K&W)

Purpose of Event

- Explain/Present on Updates to EJ Analysis, mitigations, benefits and community improvements

  Share preliminary conclusions
  Gain feedback on directed questions
  Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Potential Improvements in Morgan Hill and Gilroy Presented:

Alternative 2:

- Provide state and federal-required relocation assistance.
- Also, provide partial funding for affordable housing to offset residential displacement that cannot be relocated locally based on the housing market (@50% cost of new affordable housing unit)
  - Morgan Hill – Relocation deficit of 59 units
  - Gilroy – Relocation deficit of 75 units

Directed Questions/Responses:

- **Q: Can you explain the blue boundaries shown in the community-specific materials maps?**
  - **R:**
    - Community Boundary (light blue border): Based on census tract
    - EJ Effects Study Area (dark blue border): Communities that have higher populations of low income/communities of color
- **Q: Do the displacement numbers show on slide 16 equal the number of displacements?**
  - **R**: Yes.
- **Q: How will HSR impact the area more than Caltrain already has?**
  - **R**: DHAE's list includes displacement of business, displacement of residence, noise, visual, aesthetics, emergency response, park, and operational vibrations. Communities may face one or more of these DHAE's throughout construction and during the high-speed rail operation. Once the trains begin

running, the number of trains running through the community increases up to 100 trains in south San Jose. Traffic will increase around the Diridon Station traffic impacting noise and aesthetics in Washington Guadalupe. Some areas face delays for emergency vehicle access where there are at grade crossings.

- **Q: Who decides which Alternative is selected?**
  - **R**: The HSR Board decided in 2019 that it was the Preferred Alternative (Alternative 4). This Alternative is open to community feedback. Therefore, this alternative is preferred but not final. The steps after this phase are finalizing the Final EIR/EIS in February and the Authority Board is expected to make a decision in March 2022.
- **Q: What are other communities along this project doing with respect to the unhoused issue? Is anything differently being done?**
  - **R:** We've actually had other project section staff ask our team for insights on how to treat the issue of impacts to our unhoused community.
- **Q: When will actual construction occur?**
  - **R**: Construction ebbs and flows due to project management of various phases. Parts of the rail have begun construction in the Central Valley. Funding has also slowed down the process and impacts the timeline.
- **Q: What is the current mitigation regarding housing for those who live along the construction zone? What are we able to communicate to community advocates?**
  - **R**: HSR is a tenant in the existing agreement with the owners (Caltrain and Union Pacific). HSR is not the owner or controller of the situation and, therefore, is left up to Caltrain or Union Pacific. Any forms of relocations are mediated through the landowner and Caltrain/Union Pacific. There are instances where HSR is the owner because of the construction of new railways. These areas include the San Joaquin Valley and Pacheco Pass where there are grade separations. Abatement efforts are in the hands of Union Pacific where Union Pacific owns the railways. Execution of abatements depends on agreements made between HSR and Union Pacific.
- **Q: What is the assessment of residential displacement and relocation availability?**
  - **R**: Currently, Alternative 2 has the most significant impact on displacement. The Preferred Alternative, Alternative 4, has an even impact on EJ and non-EJ communities resulting in no DHAE

Next Steps/Actions/Follow-up:

- By 09/22: Correct and send pdf slides to Michelle Covert so that she can share with her team and the OSH Board – DONE

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Oak Grove School District
Date of Event
September 23, 2021, 2-3:30pm
Recorder of Event (Name)
Henry DeRuff
Participants/Attendees

- **José Manzo,** Superintendent
- **Laura Phan**, Interim/Retired Chief Business Officer
- **Audrey Van**, HSR
- **Rich Walter**, ICF
- **Joey Goldman** & **Henry DeRuff**, K&W

Purpose of Event

The event purpose was to:

- Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements
- Share Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Key points on community-specific presentation

- The community partners emphasized that the Caroline Davis track is a community hub. Investing in it would be a greater priority than – and would endure far beyond – a noise barrier.

Key points of concern from partner/community; any preliminary feedback to directed questions:

- Their project (Caroline Davis track) is no longer one of the primary improvements being considered. They are asking for a more holistic approach that considers the generational benefits of improving a community hub as opposed to just reducing noise.

Questions/Responses:

- **Q:** As you know, we've been involved in this engagement for the last three years. I sent a clarifying question about some of the ratings for a project we proposed as a mitigation. At some point, the project directly recommended by the Authority was taken off the table. We never were told it was taken off the table and were surprised. Your analysis makes sense (noise for noise, etc.), but with high-poverty communities, it's not as simple as putting up a barrier to stop noise. And our high-poverty communities will not be on the call this afternoon. That's why I'm advocating for this project. It's not just a recreation facility, but rather a hub for community that not only the kids, but also the families, will benefit from. The train is not going to impact these

communities positively, and I'm frankly disappointed that there was not an opportunity by the Authority to seek a greater understanding about why this is important to our community. (José)

  - **R:** This is not final. And this is our first opportunity for dialogue. The direction we got from CHSRA as a whole (not community-specific) was that mitigation must be related to the effect. I can't say that they will make that change, but you made your point clearly and holistically and we will share this feedback. The Caroline Davis project scored well, but with the shift in policy, we're headed in a different direction than where we thought we were going last year. (Rich)

- **Q:** Last year, it felt really validating to hear the Authority's interest in our project. With all the previous work and feedback, it all seemed like it was going according to plan and that we were moving along in the direction of implementation for our project, which made it even more disappointing to hear it's not a top choice anymore. What is the decision point from October 1 forward? Are there any more opportunities for input after this? (José)
  - **R:** The next step is to include this feedback (from methodology to specifics) to the Authority and decide where to go in from there. The final EIR/EIS document will be available in February and the board will decide in March. There aren't planned future feedback sessions yet, but it is possible that we will have another opportunity to sit down for follow up based on this information. (Rich)
  - **R:** Just to reiterate, we are taking notes, and we encourage you to encourage your community to attend the community meeting tonight. (Joey)
- **Q:** Looking at the different alternatives, it looks like if we go with Alternative 4, there are certain improvements considered, vs. different ones for 1, 2, 3. The reason I bring this up is that the Caroline Davis track is truly a community hub. If you go out there 7 days a week at any time, you will see not only school children but also community members walking the track. My question is, can this be tied to all 4 alternatives? (Laura)
  - **R:** That's a good piece of feedback, and the direction we will go will be determined by the Authority. (Rich)
- **R:** We know the decision-making is beyond the staff, but we want to say that we appreciate the support of the staff. (Laura)
- **R:** We will be sure to put all of this in the survey! (José)
  - **R:** One thing you could do would be to say that the track is more important than the noise abatement. (Audrey)
- **R:** Well, I understand that nexus, but this community is already so sound-polluted, people might say, "What's one more?" We're advocating from a place of community needs, not a 1:1 tradeoff. (Laura)
- **R:** The nexus-relationship thinking is short-term if it's just about noise. This track would be a generational benefit, where kids throughout generations attend this school and use this track. It would be a tremendous lost opportunity to go beyond the narrow 1:1 noise for noise. (José)

Next Steps/Actions/Follow-up:

- By **9/24**: The Outreach team will share materials and a thank you note.
- By **10/1**: The SD will complete the survey to officially write down their input.
- In **October**: The EIR/EIS team will review the feedback on the holistic benefits of the Caroline Davis project in the final EIR/EIS.

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Sacred Heart EJ HSR Update Phase 3 Meeting
Date of Event
September 23, 2021, Start Time 10:23 am End Time 11:15 am
Recorder of Event (Name)
CeCe Horbat
Participants/Attendees
• **Representative Name(s)**,   ○ Principal Lorraine Shepherd • **Staff Name**, Rich Walter (ICF), Bruce Fukuji (HSR), Cici Vu (K&W)
Purpose of Event
• Explain/Present on Updates to EJ Analysis, mitigations, benefits and community improvements Share preliminary conclusions Gain feedback on directed questions Address clarifying questions on meeting materials, desired feedback and conclusions
Key Notes

Washington-Guadalupe, community specific improvements presented
Alternatives 1, 2, and 3:
• Streetscape improvements along Goodyear Street, Humboldt Street, and Floyd Street to improve visual aesthetics.
• Funding to support community art installations in the local community to improve visual aesthetics and a sense of community.
  ○ **** If Deacon Solorio has the name of an artist in mind, please feel free to pass along****
Alternative 4:
• Noise insulation for residential buildings immediately adjacent to the east side of SR 87 to offset residual noise effects.
Questions/Responses:
• **Q: Do you have any resources to help visually illustrate the design and location of the viaducts aside from slide 20 in the presentation?**
  ○ **R**: The viaducts are for alternatives 1,2,3, and at grade, crossings occur at alternative 4 (the preferred alternative). Bruce Fukuji shared additional links for Principal Shepherd in chat/thank you email https://www.meethsrnorcal.com/station-3-videos.html

- **Q: What is the estimated duration of time between Los Banos to Guadalupe Washington neighborhood?**
    - **R**: Currently, there is no station at Los Banos, which would require people to take another form of transportation to arrive at a station. Operational time from San Francisco to Los Angeles is less than 3 hours and, on average, about 3.5 hours. Travel time between Fresno and San Jose is shorter, about 1 hour if not closer to 40-45 minutes.
- **Q: What has been some themes of the general public's concerns during the project's review process?**
    - **R**: More recently, people have concerns around construction disruption, noise, visual appearances, and displacements of businesses and residences. Also, traffic continues to be a concern but not in this neighborhood (Washington/Guadalupe). Community members in and around the Diridon station within the first 4 blocks and areas around S. San Jose face increased congestion. Safety and connectivity remain an issue of concern for communities as well.
- **Q: Have you all had to address or speak about the displacement of unhoused populations? (**Principal Shepherd acknowledged the increase of encampments near the Tamien station.)
    - **R**: We've done outreach with the Office of Supportive Housing and working with the authority to adjust to discuss displacements of unhoused populations.
- **Q: Last year, you provided surveys in multiple languages. Is this the case for this year as well?**
    - **R**: Yes. Our survey can be found in English, Spanish and Vietnamese and they are all available with the materials provided on the site: meethsrnorcal.com.
- **Q- How often will these trains be running?**
    - **R**: At Diridon southbound, full service is anticipated to run 7 trains per direction at peak and 4 per hour on non-peak hours. At North of Diridon, the high-speed train will share tracks with Caltrain, with 4-8 trains at peak and 3 trains at off-peak. Trains are anticipated to arrive every 15 minutes at peak and every 20-30 minutes off-peak.

Next Steps/Actions/Follow-up:

- K&W share links from the chat with Principal Shepherd https://www.meethsrnorcal.com/station-3-videos.html.
- Principal Shepherd will pass along information to members of the Sacred Heart Nativity community.
- Deacon Solorio to share names of any community artists with whom the Authority can collaborate related to streetscape improvements mentioned in Alternative 2.

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event

South San Jose Community Meeting

Date of Event

Thursday, September 23, 2021, 5:00 – 6:20 pm

Recorder of Event (Name)

- Jennifer Vazconcelo

Participants/Attendees

- **Representative Name(s)**
  - Huascar Castro, Silicon Valley Rising
  - Brian Stanke, San Jose Department of Transportation
  - Kerry Duncan, Rep. Lofgren Staff
  - Stacey Lu, City of San Jose
  - Jason Vann, Franklin McKinley School District
- **Staff Name**
  - Cici Vu, Facilitator
  - Rich Walter, Presenter
  - Chris Diwa, Presenter
  - Rachel Bickert, Tech Support/Webinar Manager
  - Jennifer Vazconcelo, Documentarian
  - Kimberly Larios, Spanish Interpreter
  - Priscilla Phoung, Vietnamese Interpreter

Purpose of Event

- Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements
- Share Preliminary Conclusions
- Gain feedback on directed questions
- Address clarifying questions on meeting materials, desired feedback and conclusions

Key Notes

Key points on community-specific presented

- Summary of Potential effects in the South San Jose community
  - Preliminary conclusion takes into consideration direct mitigation, project benefits and potential community improvements.
    - Alternatives 1, 2, and 3:
      - Funding for landscaping improvements along Monterey Road (as part of the City of San Jose Grand Blvd. initiative) to help offset visual aesthetic effects of HSR structures
      - Alternative 4:
      - Noise insulation for certain residences along 101 helps to offset residual project noise effects

        - Funding to City of San Jose for new pedestrian/bicycle overcrossings at Skyway, Branham, Chynoweth helps to improve safety.
    - Alternatives 1, 2, and 3: Residual disproportionately high and adverse visual effects related to the elevated viaduct or embankment.
    - Alternative 4: No disproportionately high and adverse effects
    - Preliminary conclusion takes into consideration direct mitigation, project benefits and potential community improvements.
  - Effects shown are after consideration of direct mitigation, but before consideration of the offsetting value of project benefits or community improvements.

Key points of concern from partner/community; any preliminary feedback to directed questions:

- VTA had hoped for more transit and access related improvements
- Concerns with disproportionately high and adverse impacts related to emergency response

Questions/Responses:

- **Q:** VTA was hoping that the Monterey Boulevard improvements and the access improvements to the Caltrain stations would be higher up on the list of priorities in the HSR Project. I would like to know what determines which improvements are considered in each area?
  - **R:** In the outreach materials, we analyzed the process; VTA had provided some suggestions when we did outreach in 2020. The improvements are broken up into different community areas. Specific to South San Jose, we had the entire Grand Boulevard as a potential candidate in 2020 -2022. We also had some access improvements for the capital and loss unit at both locations. When we evaluated them, we considered them as related to transportation connectivity; we looked at the close relationship as we were directed by the Authority's policy of relating improvements directly to our residual effects. If we had a residual impact on transportation, we'd be looking for transportation improvements. Essentially that methodology makes things a bit different. Also, the policy came out in 2021; we didn't have that in 2020 to guide us as we do now.
- **Q:** Could you elaborate more on the nexus between emergency response and pedestrian over crossing?
  - **R:** We've identified that emergency vehicles are an issue in the safety context, and safe crossing of the rail corridor and Monterey Road is a safety improvement; that's how we're seeing the nexus and are taking feedback on it. There are two things under consideration as potential improvements to that mitigation. First, we're looking at possible funding for the first five years of any fire stations needed to address this issue. Second, we're looking for a potential at-grade railroad monitoring system. We're looking at potentially finding an independent monitoring system that would be tied into fire and police dispatch, such that they could take this into account when making calls.

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Rebekah Children's Services: High-Speed Rail Environmental Justice Meeting
Date of Event
Friday September 24, 2021, 10:00am - 11:15pm
Recorder of Event
Rickie Cleere
Participants/Attendees
• **Representatives:** Christophe Rebboah • **Staff:** Audrey Van, Rich Walter, Cici Vu, Rickie Cleere
Purpose of Event
• Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements • Share Preliminary Conclusions • Gain feedback on directed questions • Address clarifying questions on meeting materials, desired feedback and conclusions
Key Notes

Key points of concern from partner/community; any preliminary feedback to directed questions:

- Chris indicated support for the project broadly. He added that specifically, the project will benefit the economy and provide prospective employees with alternative affordable housing options, especially if they have the option to travel from the Central Valley to Gilroy in 30 minutes. He stated that a chief concern for RCS is safety and sound impacts to sidewalks, streets, and gates, as the current fencing around the RCS campus is in disarray. He added that the project will cause traffic around the IOOF area to increase, ans that he will advocate for a pedestrian bridge and sound wall in his feedback.
- **Questions/Responses:**
- Q: The enhancement specific to RCS that we proposed is ranked third on the list, but there is no guarantee that this improvement will be implemented, correct?
    - R: Based on authority review, we are not planning on advancing those measures on the "other considered" list, including the recommendation RCS made in 2020. Instead, the potential improvements list includes the sound wall along the western side, the pedestrian/bike crossover at IOOF. Another Community Improvement that we are thinking of incorporating would be bike/ped improvements on IOOF east of the railroad tracks. The school gym, playground, updated windows, family resource center, and solar carport improvements are not being advanced because we determined, based on the updated analysis that they are not directly tied to residual safety and noise effects of the preferred alternative.
- Q: Wouldn't window enhancements be considered a mitigation to address noise?
    - R: Residual noise impacts would already be addressed by the proposed sound wall. In considering impacts to property, there are two ratings in the analysis: moderate and severe. In mitigating towards

more moderate impacts, the noise barriers mitigate the severe impacts in areas nearest to the alignment.

- Q: What is the status/trajectory of the budget/funding for the project?
    - R: We are moving forward. The Authority has requested $4B of Prop 1A funds that would be used for construction in the Central Valley, the Madera to Merced segment, and the Merced to Bakersfield segment. The state legislature has deferred these funds, which we hope to access early next year. We are examining state and federal funding sources.
- Q: To date, what percentage is the project over the original budget?
    - R: We are uncertain, as this is something that has continually changed over time.
- Q: There has been a lot of construction at South Valley Jr. High School, has this work been funded by HSR?
    - R: No, all funding is still currently in the environmental document and has not been disbursed except to fund some preliminary planning work.

Next Steps/Actions/Follow-up:

- Community Meeting: Tuesday September 28, 5:00-7:00PM

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Gilroy Community Meeting
Date of Event
Tuesday, September 28, 2021, 5:00 – 6:20 pm
Recorder of Event (Name)
• Jennifer Vazconcelo
Participants/Attendees
• **Representative Name(s)** o Alvaro Meza, Gilroy Unified School District o Kraig Tamborini, City of Gilroy o Daryl Jordan, City of Gilroy o Jason Kim, VTA o Jimmy Forbis, City of Gilroy o Kelsey Shockley, Civic Parks IGC o Marie Blankley, Mayor o Kerry Duncan, Rep. Lofgren Staff • **Staff Name** o Cici Vu, Facilitator o Rich Walter, Presenter o Morgan Galli, Presenter o Rachel Bickert, Tech Support/Webinar Manager o Jennifer Vazconcelo, Documentarian o Ana Cruz, Spanish Interpreter
Purpose of Event
• Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements • Share Preliminary Conclusions • Gain feedback on directed questions • Address clarifying questions on meeting materials, desired feedback and conclusions
Key Notes
Key points on community-specific presented • Summary of Potential effects in the South San Jose community o Preliminary conclusion takes into consideration direct mitigation, project benefits and potential community improvements. ▪ Alternatives 1, 2 and 4: • Noise insulation for certain residences along 101 to help offset residual project noise effects ▪ Alternative 2:

- Funding of recreational amenities for the South Valley Middle School to help offset partial acquisition of track/field.
- Partial funding for affordable housing to offset residential displacement that cannot be relocated locally based on housing market

▪ Alternative 4: Funding for the following:

- New pedestrian/bicycle overcrossing of the railroad at IOOF Avenue,
- Bikeway improvements (along IOOF Ave., Monterey Road, 6th Street, 4th Street, and Alexander Street)
- Sidewalk gap closure along Murray Avenue
- Neighborhood street lighting and sidewalk and curb improvements within the Gilroy Neighborhood Revitalization Strategy Area
- Designed to help offset residual project effects associated with emergency vehicle response delays (safety effects)

o Effects shown are after consideration of direct mitigation, but before consideration of the offsetting value of project benefits or community improvements.

Key points of concern from partner/community; any preliminary feedback to directed questions:

- Concerns of reaction from residents to change and how it could negatively affect the development of the project
- Support for Alternative 4
- Concerns about Alternative 2 and its impact on the charter school, navigator school, and operations transportation facilities.
- Concerns about the adverse effects on low-income residents.

Questions/Responses:

- **Q:** Can you elaborate a little bit on where the rail yard would be located? You said it was south of town, but that will be within city limits or just outside of city limits?
  - **R:** The draft environmental documents, Volume 1 Chapter 2, shows that the maintenance facility is outside of the City limits, in fact, it is further north. The maintenance facility is just east of 25 and south of Bloomfield.
- **Q:** Is there any advice on how the City of Gilroy can coordinate efforts between HSR and VTA to ensure that everybody's talking to each other?
  - **R**: HSR met with VTA as part of the community improvement planning process. In terms of knowing where the preferred alternative is and the other options that there are. As far as coordination goes, we'll continue to be coordinating with the City going forward between the City's Planning Team and HSR Planning Team. If there are plans that your team is considering, please share any developments with our High-Speed Rail team. We would certainly hope you would consider reaching out to us and talking through anything with the Authority.
- **Q**: Regarding the different Alternatives, when the Authority decides to act on the environmental document and select their preferred plan, I understand that the Preferred Alternative will be agreed on at that time as well? Also, are these concepts or ideas being proposed along the stretch, particularly in Gilroy, consolidated somewhere in a list so that people can see what's being considered?
  - **R:** To your first question, that is exactly the process that we're going through. The current direction from the Authority is where we have feasible community improvements that would have a closer relationship to our residual effects than where we're to bring them in our environmental document forward and recommend them to the Board. The Board then decides on it. Essentially, the Authority is looking at

current policies that have a close connection and are necessary to help offset. Those will be incorporated into our mitigation plan.

  - **R:** Regarding the lists of community improvements, the current list that we have and the others that we considered are in the outreach material we shared. We have been working with the City of Gilroy to identified options to advance. We have more detailed descriptions of them, and we've done some assessments to ensure that these are feasible and applicable. Those profiles are going to be included in the final document. So, when we bring that package to the HSR Board, they'll have not only a summary list, but they'll have a more detailed description of what those improvements are to help guide their later deliberation and choices.

- **Q:** I don't see many members from the communities that are impacted present in today's community meeting. I want to make sure that we're doing all that we can to reach out to them, and hopefully, other groups you reached out to have done their part in getting people involved. For example, I don't see Rebekah Children's Services in the community meeting, and I wonder whether they are still fully engaged, or is there something we can do to make sure they stay engaged in the process?

  - R: We have had meetings with Gilroy, Gilroy USD, Gavilan College, and Rebekah Children's Services. We've had one-on-one sessions with all of them this month. So those organizations are engaged, and we had robust discussions about providing input on that. Right now, we are in the third round of outreach and engagement. We had round one at the start of 2019. We talked to community members; we held a school community meeting at South Valley middle school, which the principal hosted. We've been out in the community and have talked to Alexander Station residents and the manager. We've held several partner meetings with you all. I think the low turnout today on the community side speaks to challenges everyone faces in terms of school starting, family life, and all that surrounds the public health issues. Last week, we met with Chris Rebboah from Rebekah Children's Services and invited him today and some community members. They are still very actively involved, and they will be submitting their feedback.

Next Steps/Actions/Follow-Up

- The Outreach Team provided the following web resources through the chat to participants during the community meeting.
  - Link to map on the Authority's website: https://maphsrnorcal.org/SanJose-Merced/

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
Center for Employment Training
Date of Event
September 28, 2021, 4-5 pm
Recorder of Event (Name)
Henry DeRuff
Participants/Attendees

- **Hermelinda Sapien**, President & CEO, CET
- **Rosa Ontiveros**, Executive Assistant to Hermelinda, CET
- **Bruce Fukuji**, HSR
- **Rich Walter & Greta Brownlow**, ICF
- **Joey Goldman & Henry DeRuff**, K&W

Purpose of Event

- Explain/Present on Updates to EJ Analysis, Mitigations, and Benefits
  - Emphasize direct relationship between effect and improvements
- Share Conclusions
- Gain feedback on directed questions
- Address CET-specific concerns about workforce development

Key Notes

Key points on community-specific presentation

- No DHAEs related to job loss were identified—in fact, this will create many jobs—therefore there is no nexus in the analysis right now. This was the focus of the presentation, as opposed to a focus on a specific community.

Key points of concern from partner/community; any preliminary feedback to directed questions:

- How residential, business, and employment displacements would be addressed.
- How to get involved with HSR so that when jobs become available, their graduates have the right skillset to get those jobs. They want to pursue these jobs for their graduates whether they are funded by HSR or not.

Questions/Responses:

- **Q:** Is Alternative 4 the preferred alternative? (Rosa)
  - **R:** Yes. (Rich)
- **Q:** What are the types of businesses that will be impacted? (Hermelinda)

  - **R:** This varies considerably from location to location. For some, it's an aggregated rock construction site, others are retail, others are agricultural. I don't have a specific breakdown on the types of businesses.

- **Q:** Of course, our services continue whether or not we're funded by HSR. What kind of skills should we be looking at to fill those available jobs? That's a large number of opportunities we should be looking at. (Hermelinda)
  - **R:** I would suggest a follow-up so we can talk with members of the construction arm of HSR. As I understand it, the jobs will primarily be in heavy construction, but also construction, welding, steel, electrical, and more. I will follow up with the Authority to see if they have a summary of the types of jobs created out in the Valley, since ours will be very similar. It's a mix of skilled and unskilled jobs. Operation jobs include running the trains & maintenance. One Maintenance of Infrastructure (MOI) facility will be just south of Gilroy. There will also be jobs at the stations, including ticketing, luggage, etc. There will also be a maintenance facility (LMF) in Brisbane: cleaning the cars, turning around cars in and out of the SF station. (Rich)
- **Q:** Can you speak more about the Community Benefits Agreement in the Central Valley? (Rosa)
  - **R:** I don't know the inner workings of that, but I can connect you with someone who does. (Rich)
  - **R:** Yes, please connect us with those people. We will want to reach out to them so that we know who to connect our graduates to as soon as jobs become available. (Rosa)
  - **R:** The Authority created a workforce development center in Selma that was pre-apprenticeship, so we could connect you with them. You would probably get some really good feedback on specific job training from them. (Bruce)
  - **R:** Pre-apprenticeships are where we want to go and where we're headed, especially if Biden's plan goes through, so we would love any and all connections on that. (Rosa)
  - **R:** This is a good demonstration of the fact that even though there's not a specific mitigation measure focused on CET, there are still opportunities to collaborate between CET & HSR. (Joey & Rich)
- **Q:** As a resident, what will the effects of housing displacement be in the community? (Hermelinda)
  - **R:** We found DHAEs in several of the communities we analyzed but will pay for relocation in all communities where we can. In Gilroy and Morgan Hill, we will subsidize new affordable housing. In Guadalupe-Washington, there is no residential displacement. There is some in Gardner-Willow Glen and around Diridon Station. (Rich)
- **Q:** So how does CET fit into this big picture? (Hermelinda)
  - **R:** What we found is that there's no DHAE to offset; in fact, since we'll create more jobs, it's actually a benefit. There are residual effects: noise, and for Alternatives 1-3, the visual effects of an elevated track; but no employment effect. But if you disagree or if you believe there are other needs that are more important, you can advocate for that. (Rich)
  - **R:** The goal of the Authority is to figure out if there are DHAEs and address them, so if you believe that there are effects that need to be considered, please give that feedback. (Bruce)
- **Q:** When will an alternative be chosen? (Rosa)
  - **R:** The Board will decide in March at the Board Meeting. (Rich)
- **Q:** Since Alternative 4 is at grade, how are homeless encampment displacements being considered? (Rosa)
  - **R:** We've gotten that feedback at a number of different points, so we're taking that feedback and considering it. With construction, we will likely be displacing some folks, so we're considering how to mitigate that effect. That's not part of the typical analysis but we're considering it, especially in Tamien

and along the Guadalupe River, where there are well-established homeless encampments. Thank you for bringing that up. (Rich)

- **Q:** During Gov. Brown's Administration, there was a lot of public consternation about HSR. Is the project well-supported financially? Is that part of the Biden Administration's infrastructure bill? (Hermelinda)
    - **R:** A portion in the Central Valley is funded, but there will be more funding needed to extend it into the Bay Area and Los Angeles. We release business plans every two years that consider new sources of money. Depending on which infrastructure bill makes it through Congress, we may or may not get funding. (Rich)
    - **R:** Depending on the bill, there's between $10-20 billion available that the state could compete for and HSR has an advocate in the White House in Kamala Harris. Plan Bay Area 2050 also has $7 billion to bring HSR into the Bay Area. Opportunities for maximizing the benefits of every investment are considered, which is why the tracks were extended through Gilroy and Morgan Hill, as an improved commuter rail system. (Bruce)

Next Steps/Actions/Follow-up:

- HSR **will provide CET with contacts at the Workforce Development Center in Selma,** to help CET identify job skills they should prepare candidates for.
- Rich **will follow up with HSRA to request a list of job types in the Central Valley**.

EJ PHASE 3 MEETINGS
SEPTEMBER 2021
AFTER ACTION REPORT

Title of Event
High-Speed Rail EJ Briefing - Morgan Hill Unified
Date of Event
Wednesday September 29, 2021, 3:30 – 5:00pm
Recorder of Event
Rickie Cleere
Participants/Attendees
• **Representative Name:** Dr. Carmen Garcia - Superintendent • **Staff:** Morgan Galli, Rich Walter, Cici Vu, Rickie Cleere
Purpose of Event
• Provide background information and an overview of the project • Explain/Present on Updates to EJ Analysis, Mitigations, Benefits and Community Improvements   ○ Emphasize direct relationship between effect and improvements • Share Preliminary Conclusions • Gain feedback • Address clarifying questions on meeting materials, desired feedback and conclusions
Key Notes

Key points of concern from partner/community; any preliminary feedback to directed questions:
• Dr. Carmen Garcia expressed concern about business displacements and impacts to communities of color along the alignment of Preferred Alternative 4, and prefers alternatives that would not travel through downtown Morgan Hill, based on the team's presentation of the summary of potential effects to the community.
Questions/Responses:
• Q: How did you share information about the community meeting? Who was invited?
  ○ R: A targeted invite was sent to stakeholders on in late July. Invitees included the City of Morgan Hill, Morgan Hill USD staff and the prior superintendent, leaders of district parent group, and representatives of interested community organizations.
• Q: Is the community/city largely in support of the project?
  ○ R: The City submitted a letter with their feedback that we can share with you if needed. We have worked with the city manager and assistant city manager for a long time. They have expressed the benefits of the different alternatives and some things they would want added for the Authority's consideration. They are concerned with both sets of alternatives (1 and 3, 2 and 4) with respect to community effects, displacements of residents and businesses, noise, traffic, emergency vehicle response time, and construction disruption among other considerations. Morgan Hill USD submitted a detailed technical comment letter. The City is also interested in getting more Caltrain service, and Caltrain electrification and modernization would allow for the service extension. The City opposes

Alternative 2 because it enters through downtown Morgan Hill and has a large footprint. However, they have not expressed a clear preference among the other three alternatives.

- Q: Doesn't Alternative 4, the Preferred Alternative, have the most impacts? (In the context of the Summary of Potential Effects.)
    - R: Alternative 4 has the most impacts, but the scale and context of these impacts is important to consider, as the community effects table looks at the entire project section, San Jose to Merced. Alternative 4 doesn't have aesthetics impacts and will only cause 1 business displacement, there are no substantial or disproportionate impacts to parks, and severe noise impacts will be limited to approximately 20 receptors. Alternative 4 will have no severe noise impacts to schools, no disproportionately high and adverse vibration impacts, and a traffic impact at one location after the incorporation of mitigation. There will be emergency response delays, which will impact people outside the environmental justice area in the southern part of Morgan Hill. The Authority will include mitigation to address severe impacts wherever possible.
- Q: Are the state agency and the Board the same? Do they make the final decisions on the project?
    - R: That's correct. Authority staff are currently accepting and responding to comments, which will be incorporated into the Final EIR/EIS for the project section. Once the EIR is complete in Spring 2022, the Authority Board will come to a final decision on how the project will proceed.
- Q: What happens with feedback that is received?
    - R: There could be adjustments to design, additional mitigation, or other measures taken. A record of comments received and their responses is currently being compiled for reference.

Next Steps/Actions/Follow-up:

- Comment period closing date: October 1, 2021

1 INTRODUCTION

As described in Section 5.6, Assessment of Effects, and Section 5.7, Summary of Disproportionately High and Adverse Effects Prior to Consideration of Offsetting Mitigation Measures, of the Final Environmental Impact Report (EIR)/Environmental Impact Statement (EIS), after application of direct mitigation and consideration of project benefits, there still remain some disproportionately high and adverse effects from project alternatives on minority populations and low-income populations.

Throughout the EIR/EIS process, the California High-Speed Rail Authority (Authority) engaged with minority populations and low-income populations, as well as service and public agencies that serve these populations, to identify the concerns of individuals about the effects of the project and to identify potential community improvements that could offset residual disproportionately high and adverse effects and thus serve as offsetting mitigation measures.

The evaluation of potential community improvements followed the following process, aimed at identifying community improvements that could offset residual disproportionately high and adverse effects:

- Development of the planning process, including evaluation criteria (see Chapter 3, Planning Process and Improvement Evaluation) in November 2019.
- Initial outreach (Community Outreach, Phase One) focused on identifying needs and community improvement concepts from December 2019 through January 2020.
- Development and evaluation of potential improvements from February through June 2020, including development of community improvement profiles containing a description of each improvement, location, disproportionately high and adverse effects potentially addressed by the improvement, consistency with local plans and policies, preliminary cost estimates, summary of relevant input from communities and local agencies, evaluation against the evaluation criteria, and a figure showing the improvement location.
- Additional outreach to potential implementing partners (Community Outreach, Phase Two) in July and August 2020.
- Further refinement of analysis, definition of proposed improvements, and development of updated profiles and evaluation scoring from August 2020 through November 2020.
- Determination of nexus of potential improvements to residual disproportionately high and adverse effects and identification of potential offsetting mitigation measures for different project alternatives from May 2021 through July 2021.
- Identification of the potential for secondary physical effects on the environment due to implementation of potential community improvements in July 2021.
- Additional outreach on revised environmental justice analysis and potential community improvements in September 2021.
- Development of final recommendations of community improvements proposed as offsetting mitigation measures in the Final EIR/EIS from October 2021 through February 2022.

This process and evaluation of potential community improvements is described further in this report. The community improvements proposed as offsetting mitigation measures are further profiled in Attachment A, Profiles of Proposed Offsetting Mitigation Measures. Prior to discussion of the development process, evaluation, and selection of community improvements as offsetting mitigation measures, Chapter 2, Community Existing Conditions, describes the existing conditions in the minority communities and low-income communities that would be affected by the high-speed rail (HSR) project.

2 COMMUNITY EXISTING CONDITIONS

2.1 Introduction

The community improvements planning process focuses on the community improvements with the potential to offset a subset of project effects within the following communities: Santa Clara/North San Jose; San Jose Diridon; Gardner/Willow Glen; Washington/Guadalupe, Tamien, and Alma/Almaden; South San Jose; Morgan Hill; Gilroy; and San Joaquin Valley. These communities are comprised of those census districts wherein minority populations and low-income populations are greater than in the reference community and where these populations would experience one or more residual disproportionately high and adverse effects due to the project alternatives, prior to the consideration of community improvements as offsetting mitigation measures. The boundaries of these communities, as defined for the purpose of this report, are illustrated on Figures 2-1 through 2-8. Also illustrated on each of the figures is a 0.5-mile area from the project footprint within which project effects would be concentrated. This chapter describes the existing setting of these communities to provide context for development and consideration of potential community improvements as proposed offsetting mitigation measures.

2.2 Overview of Affected Communities

2.2.1 Santa Clara/North San Jose

Comprised of the city of Santa Clara, portions of unincorporated Santa Clara County, and a small portion of the northern part of San Jose, the Santa Clara/North San Jose community is the northernmost community of focus in this report. Minority communities and low-income communities are found within the area bounded approximately by Scott Boulevard and North Winchester Boulevard on the west, Newhall Street and Walnut Grove Avenue on the south, Interstate (I-) 880 on the southeast, and De La Cruz Boulevard and Martin Avenue on the east, bordering Norman Y. Mineta San Jose International Airport (Figure 2-1). This community is located in the San Jose Diridon Station Approach Subsection, as described in Chapter 5, Environmental Justice, of the EIR/EIS.

Located within Silicon Valley, the community is home to the headquarters of several large high-tech companies, Santa Clara University, Levi's Stadium, and Great America. The Caltrain corridor divides the community, with predominantly industrial land uses located east of the existing Caltrain corridor and single-family and high-density residential land uses to the west. A number of high-density apartment complexes are directly adjacent to and on the west side of the tracks between Scott Boulevard and Lafayette Street. Families concentrated in this area are largely minority and low income who cite noise and safety as chief concerns. Three elementary schools within 1 mile of this area serve this community. These schools' populations are 70 to 90 percent minority and 50 percent or more free and reduced lunch–eligible students. These elementary schools currently cite limited ingress and egress routes for students who travel by foot or bus from these areas, so any disruptions or changes to the current routes would affect the safe routes to school plans.

Land uses east of the tracks are primarily industrial, with a small pocket of residential north of DiGiulio Avenue at Avila Avenue. Land uses west of the tracks are predominantly residential and abut the tracks north of Warburton Avenue. There is some commercial use between Lafayette Street and De La Cruz Boulevard. South of De La Cruz Boulevard, commercial and government uses on the west side of the HSR alignment are separated from residential uses by El Camino Real, as are the sports stadium and fields south of Palm Drive.

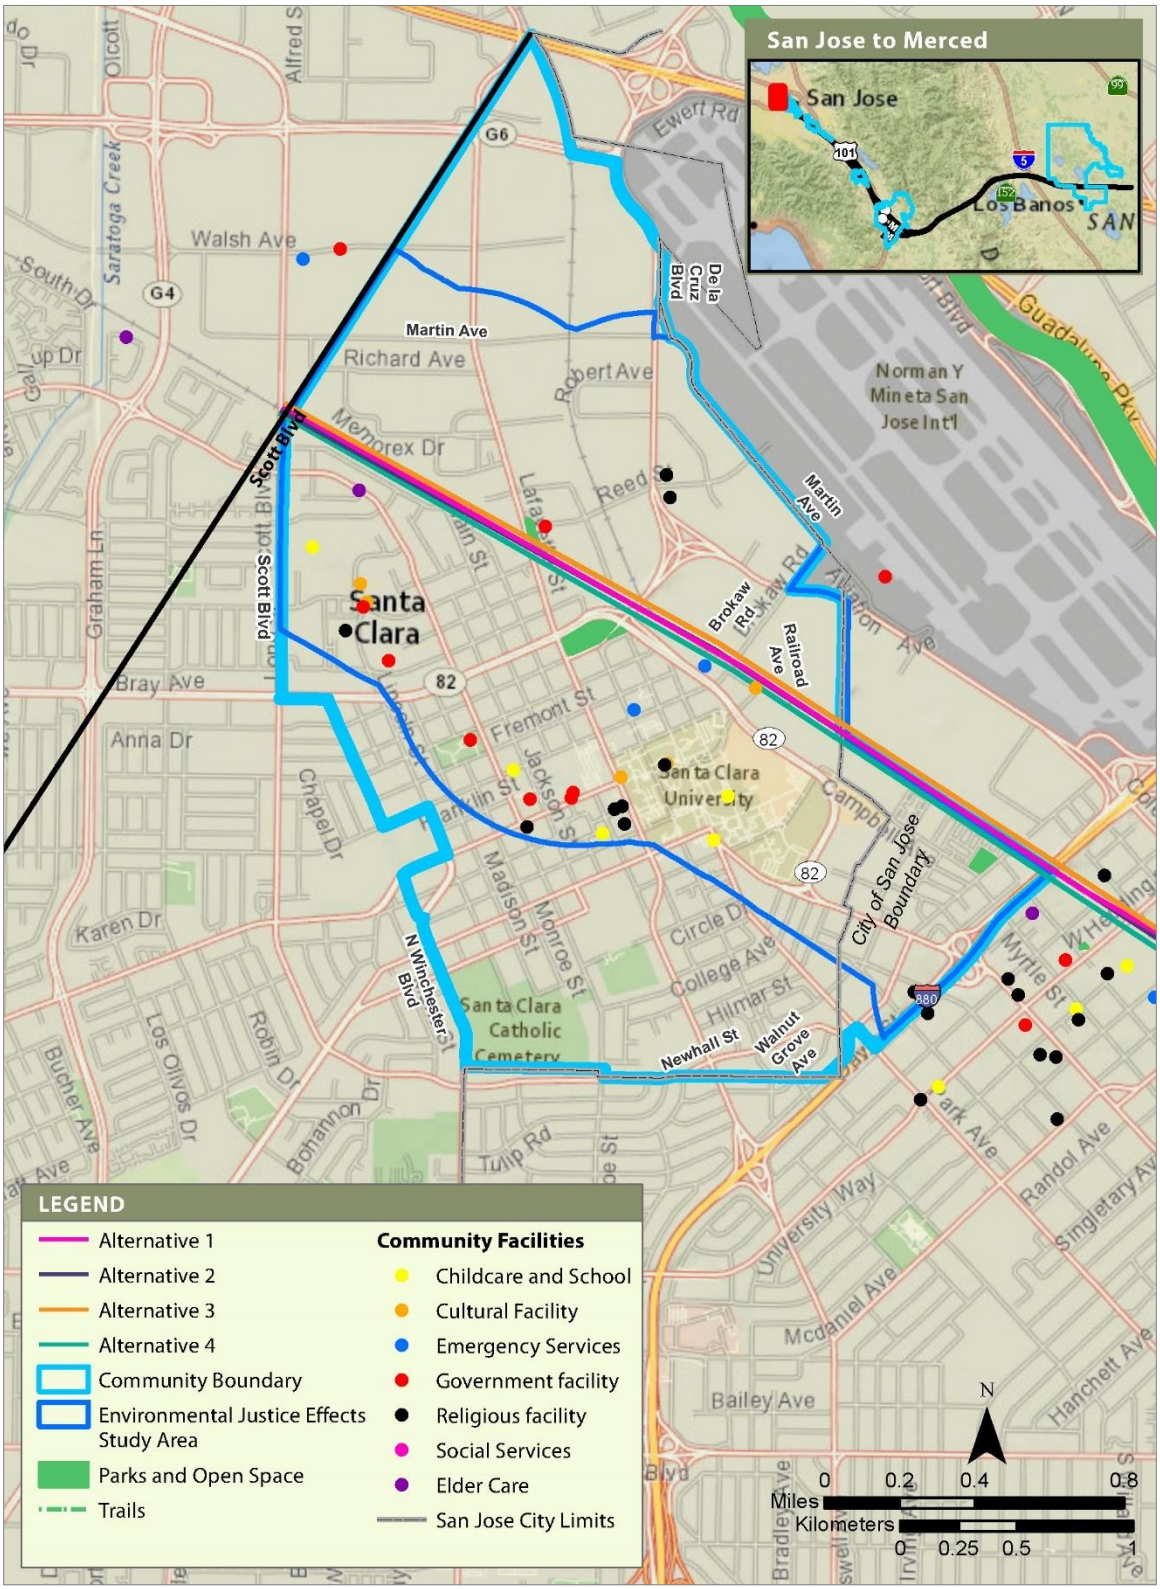

Figure 2-1 Santa Clara/North San Jose

Assets within the community include several sports venues for baseball, soccer, and swimming, as well as various parks, including Reed Street Dog Park on the east side of the HSR alignment and Larry J. Marsalli Park on the west side. Schools and places of worship are located throughout the community. Santa Clara University and Mission Santa Clara are located adjacent to the stadium complex south of Benton Street on the west side of State Route (SR) 82 (El Camino Real). There are four cultural resource facilities within the Santa Clara resource study area (RSA), including the Triton Museum of Art, Masjid Al-Noor Mosque, a Muslim Community Center, and one social service facility.

This community is primarily in the City of Santa Clara, extending into just the edges of part of North San Jose. Both cities have plans for increased housing and mixed-use developments to accommodate both business and high-density residential growth. Affordable housing remains a challenge in both cities. The City of Santa Clara requires that a percentage of housing in new developments be dedicated to low- and moderate-income residents (City of Santa Clara n.d.). The Santa Clara Station Area Plan for redeveloping the Santa Clara Transit Center area was developed by the City in cooperation with the City of San Jose and the Santa Clara Valley Transportation Authority (VTA) and incorporated into the Santa Clara General Plan (City of Santa Clara 2010). It plans for 432 acres (244 acres of which are in Santa Clara) of housing, offices, retail, hotels, restaurants, parks, and other amenities. Considered a planning “focus area,” the plan area partially overlaps or is adjacent to the census tracts that contain minority populations and low-income populations. The General Plan map also shows areas within or near these census tracts as slated for community mixed use, medium- and low-density residential development, and public or quasi-public uses.

Planning in North San Jose must align with the City’s Envision San José 2040 General Plan (adopted in 2011 and updated in 2020) (City of San Jose 2020a) and area plans and specific plans that tier from it. The North San Jose Area Development Policy (City of San Jose 2017) provides a framework for smart growth that promotes economic activity, livability, and long-term vitality for its neighborhoods. The guiding principles of the related North San Jose Area Development Policy Neighborhoods Plan (City of San Jose 2009a) prioritize parks and recreation, libraries, schools, neighborhood connectivity, walkability, and access to public transit. The City of San Jose also is in the process of drafting its Better Bike Plan 2025 (City of San Jose 2020b), which would be an update of the San Jose Bike Plan 2020 (City of San Jose 2009b). The plan will provide recommendations for increased safety, comfort, convenience, and equity for bicycle users in the City.

The Santa Clara/North San Jose community consists of 31 percent Hispanic/Latino, 4 percent Black, 22 percent Asian, and less than 1.0 percent each Native American and Alaska Native/Hawaiian/Pacific Islander residents. The total minority population of 57 percent is less than the percentage of minorities in the three-county reference community. Low-income residents in the Santa Clara/North San Jose community represent 39 percent of the population, more than the percentage of low-income residents in the reference community.

2.2.2 San Jose Diridon

The San Jose Diridon community within the city of San Jose includes the existing San Jose Diridon Station and is a dense urban mix of neighborhood-serving commercial, parking for the station, multifamily residential, and industrial land uses. The community boundaries are I-880 on the north, Stockton Avenue on the west to the Alameda, then Sierra Avenue and Meridian Avenue to I-280 on the southern perimeter from Meridian to South First Street. The eastern border is formed mainly by SR 82 and SR 87 (Figure 2-2). This community is located in the San Jose Diridon Station Approach Subsection.

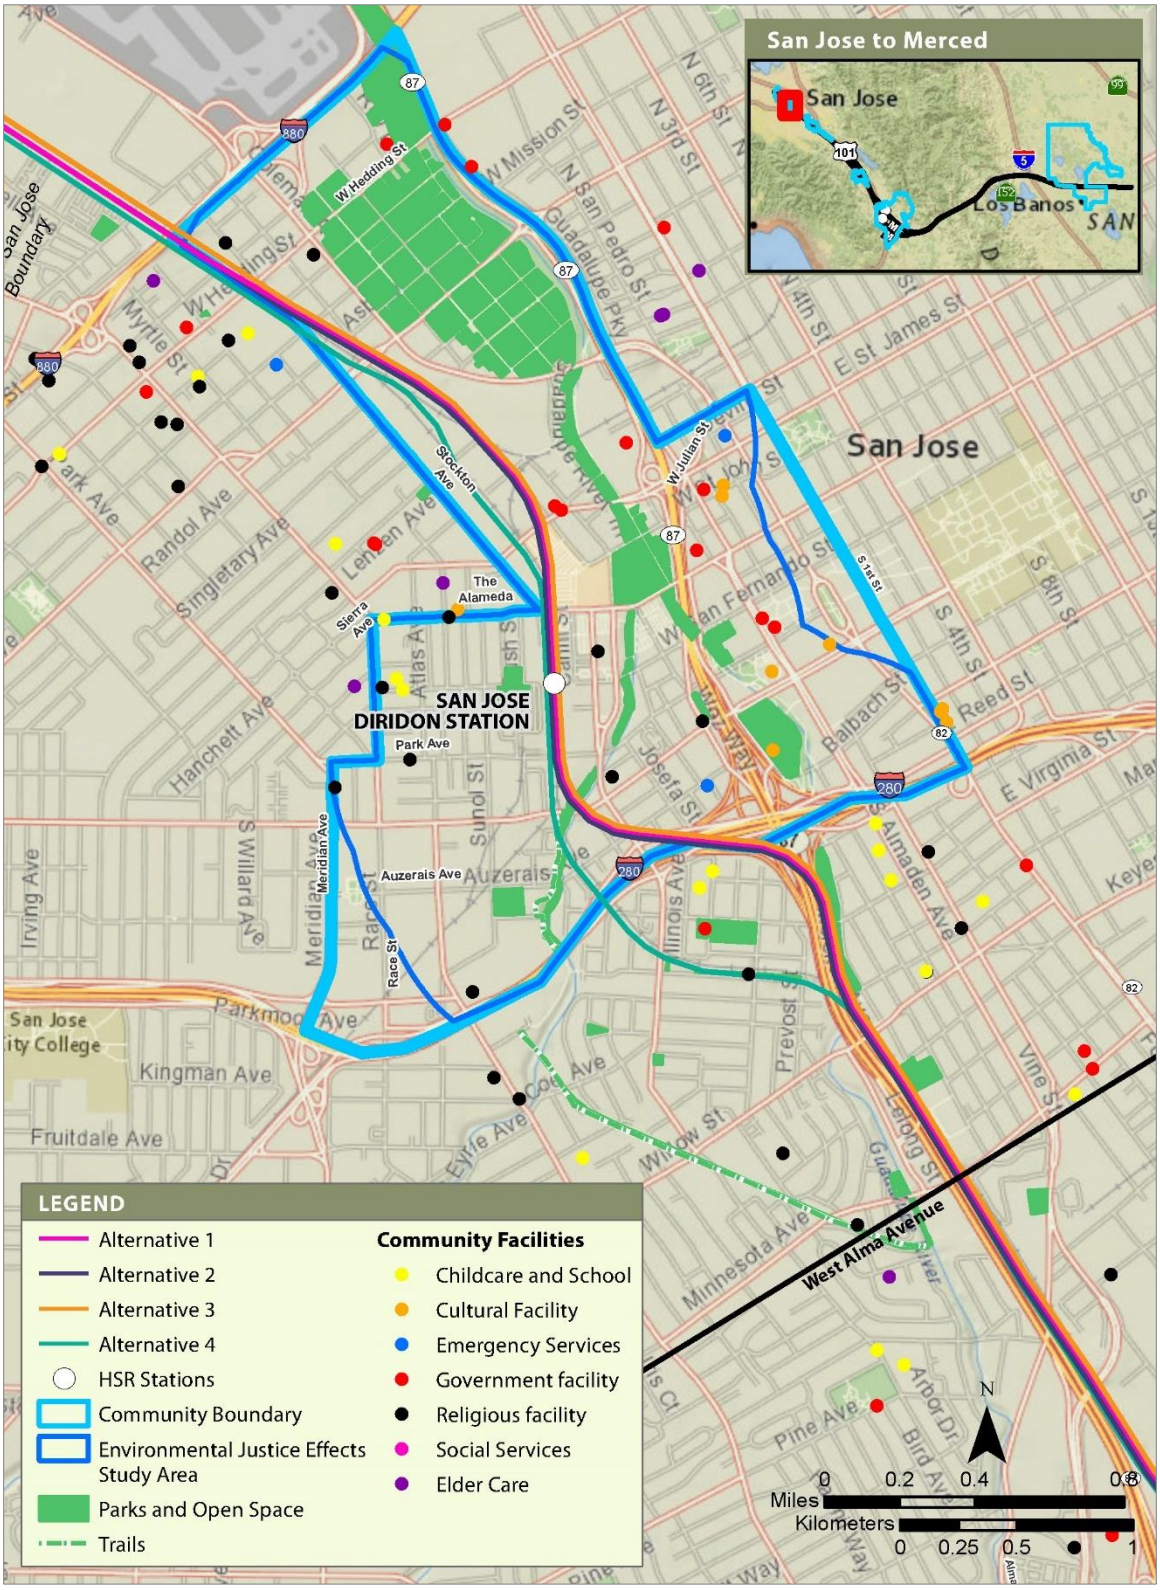

Figure 2-2 San Jose Diridon

Residential uses are concentrated on both sides of Park Avenue, a primary thoroughfare within the community. Diverse land uses—ranging from single-family and multifamily residential units to service-commercial, office, institutional, parks, and industrial uses—surround the San Jose Diridon Station. Ethnic small businesses and restaurants make up some of the commercial uses in this area, including Vietnamese sandwich shops, taquerias, and other restaurants and clothing stores. Multifamily residential buildings exist along the entire west side of San Jose Diridon Station, facing the existing tracks and platforms.

There are also some commercial uses and Cahill Park directly west of the station. East of the station and between the HSR alignment and Guadalupe River Parkway is a mix of Santa Clara County office uses, a Target store, the SAP Center that is the home of the San Jose Sharks hockey team, Arena Green East Park, and a mix of residential and commercial uses. Farther east and east of Guadalupe River Parkway is downtown San Jose, with the Tech Museum of Innovation, the San Jose Convention Center, and Children's Discovery Museum. The San Jose Fire Department Bureau of Field Operations campus is located just south of San Jose Diridon Station on the east side of the HSR alignment. Delmas Park area is a historic conservation area, where most of the residential structures have distinctive characteristics that are typical of architecture of the early 20th century. To the north of Delmas is the San Jose Center for Performing Arts, which hosts multicultural and multilingual events for the Vietnamese and Latino communities in the area. The San Jose Diridon area is also a hub for services for homeless, youth, and vulnerable and underserved populations.

In the heart of downtown San Jose is the African American Community Service Agency, which not only provides a safe haven for African American community members but also embraces everyone needing assistance regardless of their ethnic background. Some programming offered to the San Jose community broadly includes "Meet the Black Authors & Artists," "Family Fun Fridays," and "Fireman Dads and Sons."

The San Jose Diridon community assets include regional attractions such as the SAP Center and Arena Green East Park, complementing a mix of residential and commercial uses. Neighborhood-serving assets include St. Leo the Great Parish and Chinmaya Mission, which lie to the west of San Jose Diridon Station, and Shri Krishna Vrundavana Temple to the south. Primera Iglesia Bautista is southeast of the station just west of SR 87. An Elks Lodge is approximately 180 feet from SR 87 on the west side of the HSR alignment. Parks in the area include Guadalupe River Park, Guadalupe River Trail (Reach 6), Theodore Lenzen Park, Cahill Park, and the Los Gatos Creek Trail. In August 2020, the San Jose Spotlight reported on a study that found San Jose residents valued their parks but that people of color and low-income individuals in the City have more trouble accessing parks than other groups, with Blacks and Latinos reporting the most difficulty (Wipf 2020).

Like North San Jose, development in this area is guided by San José's Envision 2040 General Plan (City of San Jose 2020a), as well as the Diridon Station Area Plan, approved in 2014 (City of San Jose 2014). The planning area and subareas overlap census tracts containing low-income residents in the San Jose Diridon community (City of San Jose n.d.). Community engagement on the Diridon Station Area Plan since 2018 has included convening a Station Area Advisory Group consisting of 38 community organizations; meetings are ongoing in 2020. Along with transportation agencies and others, Station Area Advisory Group members include neighborhood and resident associations, bicycling advocates, schools, and business groups, illustrating the extent of community interest in development decisions (San Jose Diridon Station Area Community Engagement n.d.). In November 2016, Santa Clara County voters approved a $950 million Affordable Housing Bond (Measure A), which was projected to fund 120 new affordable housing developments for county residents, including $17 million toward the development of several mixed-income housing complexes within the San Jose Diridon vicinity, including Villas on the Park and West San Carlos Housing. These developments will add more than 150 housing units in this area for low-income and very low-income residents, who are also transit dependent (Santa Clara County 2018).

The San Jose Diridon community consists of 30 percent Hispanic/Latino, 8 percent Black, 20 percent Asian, and less than 1 percent each Native American and Alaska Native/Hawaiian/Pacific Islander residents. The total minority population of 58 percent is less than the percentage of minorities in the three-county reference community. Low-income residents represent about 31 percent of the population, more than the percentage of low-income residents in the reference community.

2.2.3 Gardner/Willow Glen

The Gardner/Willow Glen community in San Jose lies southwest of the intersection of I-280 and the Guadalupe Freeway (SR 87). The northwestern boundary of the community is formed by I-280 and Meridian Avenue south of I-280. Willow Street forms the southern border, and the community is bounded by SR 87 to the northeast and east (Figure 2-3). The existing Caltrain tracks bisect the Gardner/Willow Glen neighborhood northwest to southeast predominantly north of Fuller Avenue. This community is located in the San Jose Diridon Station Approach Subsection of the RSA, as described in Chapter 5 of the EIR/EIS.

The Greater Gardner area has existed in the heart of San Jose since 1911 but was bisected by historic freeway construction, which affected neighborhood cohesion. The neighborhoods are near Downtown San Jose and public transportation and are characterized by modest single-family houses with a blend of historic and traditional architectural styles. Land uses in the Gardner/Willow Glen community are almost entirely residential and include schools and parks as well as some neighborhood-serving commercial uses in the southern portion of the neighborhood. The community also includes a limited amount of public/quasi-public uses.

Neighborhood-oriented community facilities include Gardner Academy, the Gardner Community Center, Fuller Park, and Biebrach Park, which provide a focus for the neighborhood's residents and families. The Gardner Community Center provides a variety of programs, including after-school activities and adult education. Gardner Academy also has sports fields and playground areas and is home to Go Kids, Inc. (which acquired Estrella Family Services in 2015), which provides after-school care for Gardner Academy families. Families who attend Gardner Academy and use the Community Center generally travel by foot and bicycle, and some must cross the tracks at Auzerais and West Virginia, so a concern for this community is at-grade crossing safety for the school community. The Word of Faith Christian Center is at the corner of Delmas Avenue and Fuller Avenue, directly adjacent to the tracks. In addition to its function as a house of worship, the church provides food for the needy and counseling for teens.

San Jose's Envision San José 2040 General Plan (City of San Jose 2020a) also applies to the Gardner/Willow Glen community. The Greater Gardner Neighborhood Improvement Plan (City of San Jose 2002a), prepared as part of the San Jose Strong Neighborhoods Initiative (SNI), presents a vision of and for the community. It describes a neighborhood with a unified character despite the highways, streets, and rail lines that divide it. Prior to those transportation projects, Gardner was historically part of one larger neighborhood together with Gregory Park and Washington/Guadalupe to the east. These smaller neighborhoods are still functionally connected and share a residential character. The Gardner Community Advisory Council, Gregory Plaza Neighborhood Association, and the North Willow Glen Neighborhood Association represented the area's diverse residents. These associations were active in community affairs at the time the plan was published, concurring on neighborhood concerns such as problems related to soil conditions, housing maintenance, and pedestrian safety.

The Greater Gardner Neighborhood Improvements Plan envisioned key improvements that will enhance its character, attractiveness, and livability, creating a strong neighborhood identity while integrating with the surrounding community. However, unstable wetland soils underlie the neighborhood and over time have caused deteriorated streets and structures. Past groundwater pumping exacerbated the instability by causing subsidence, although recent groundwater recharge policies have reduced this effect. Adjacent freeway traffic, aircraft, and trains contribute to noise levels above those considered acceptable by the U.S. Environmental Protection Agency. Freeway traffic during peak hours leads to congestion and delays at traffic signals (City of San Jose 2002a).

Figure 2-3 Gardner/Willow Glen

This community is faced daily with gang and criminal activity, including prostitution and drugs. This community has coped with these negative effects through strengthening of schools, community-commissioned art, and spiritual and youth-focused organizations. Recognizing this prominent issue in the community, the City of San Jose has formed a Safety Coalition that regularly monitors neighborhood streets and educates the community on ways to address the gang activity.

In December 2017, the San Jose Historic Landmarks Commission granted historic status to the Greater Gardner Neighborhood, an area encompassing North Willow Glen, Gregory Plaza, and Gardner. Sought by residents for more than a decade, the designation honors the old farmhouses that reflect the area's agricultural past and other historic and contemporary building styles found in the neighborhood (Baum 2017).

Median household income in Gardner/North Willow Glen was $66,423 in 2016, compared to $93,854 in Santa Clara County. High-school graduation rates and percentage of residents with some college or associate degree exceeded those of the county overall. Renters are 70 percent of households, and 49 percent of households pay a gross rent that is at least 30 percent of household income (Santa Clara County Public Health 2016a).

Population within the neighborhood has remained relatively constant over the last 10 years, with an increase in the percentage of residents of Hispanic origin. The population of the Gardner/Willow Glen community consists of 52 percent Hispanic/Latino, less than 1 percent Black, about 4 percent Asian, and about 1 percent each Native American and Alaska Native/Hawaiian/Pacific Islander residents. The total minority population of about 58 percent is less than the minority percentage in the three-county reference community. Low-income residents represent 26 percent of the population in Gardner/Willow Glen, more than the percentage of low-income residents in the reference community.

2.2.4 Washington/Guadalupe, Tamien, and Alma/Almaden

The Washington/Guadalupe, Tamien, and Alma/Almaden community is bounded on the north by I-280; on the west by SR 87, the Guadalupe River, and Almaden Road; on the south by Curtner Avenue; and on the east by South First Street/Monterey Road (Figure 2-4). It is on the opposite (east) side of SR 87 from the Gardner/Willow Glen neighborhood, with which it has historic ties from before construction of the freeway. This community is located in the Monterey Corridor Subsection of the RSA, as described in Chapter 5 of the EIR/EIS.

Like Gardner/Willow Glen, the Washington/Guadalupe, Tamien, and Alma/Almaden community is predominantly residential, with some neighborhood-serving commercial uses along First Street, South Almaden Avenue, and Willow Street in the Washington/Guadalupe neighborhood. In the Tamien Caltrain Station area are some light industrial and commercial uses. The Alma/Almaden area includes residential areas for about 0.25 mile south of West Alma Avenue; the area to the south is dominated by light industrial and commercial uses.

Schools in this community include Washington Elementary School, Rocketship Matteo Sheedy Elementary School, and Sacred Heart Nativity (Middle) School. Rocketship Matteo Sheedy Elementary School is not a part of the public-school system; it is a charter school started in this community in recognition that Washington Elementary School did not have the capacity to sufficiently serve the school community in this area. Similarly, Sacred Heart Nativity Middle School was started for this community due to the absence of other middle schools serving the community. Sacred Heart was also started with private funds from community benefactors to help relieve the gang activity that is a major issue for the community. It admits fewer than 100 middle schoolers each year from the community, largely on scholarship.

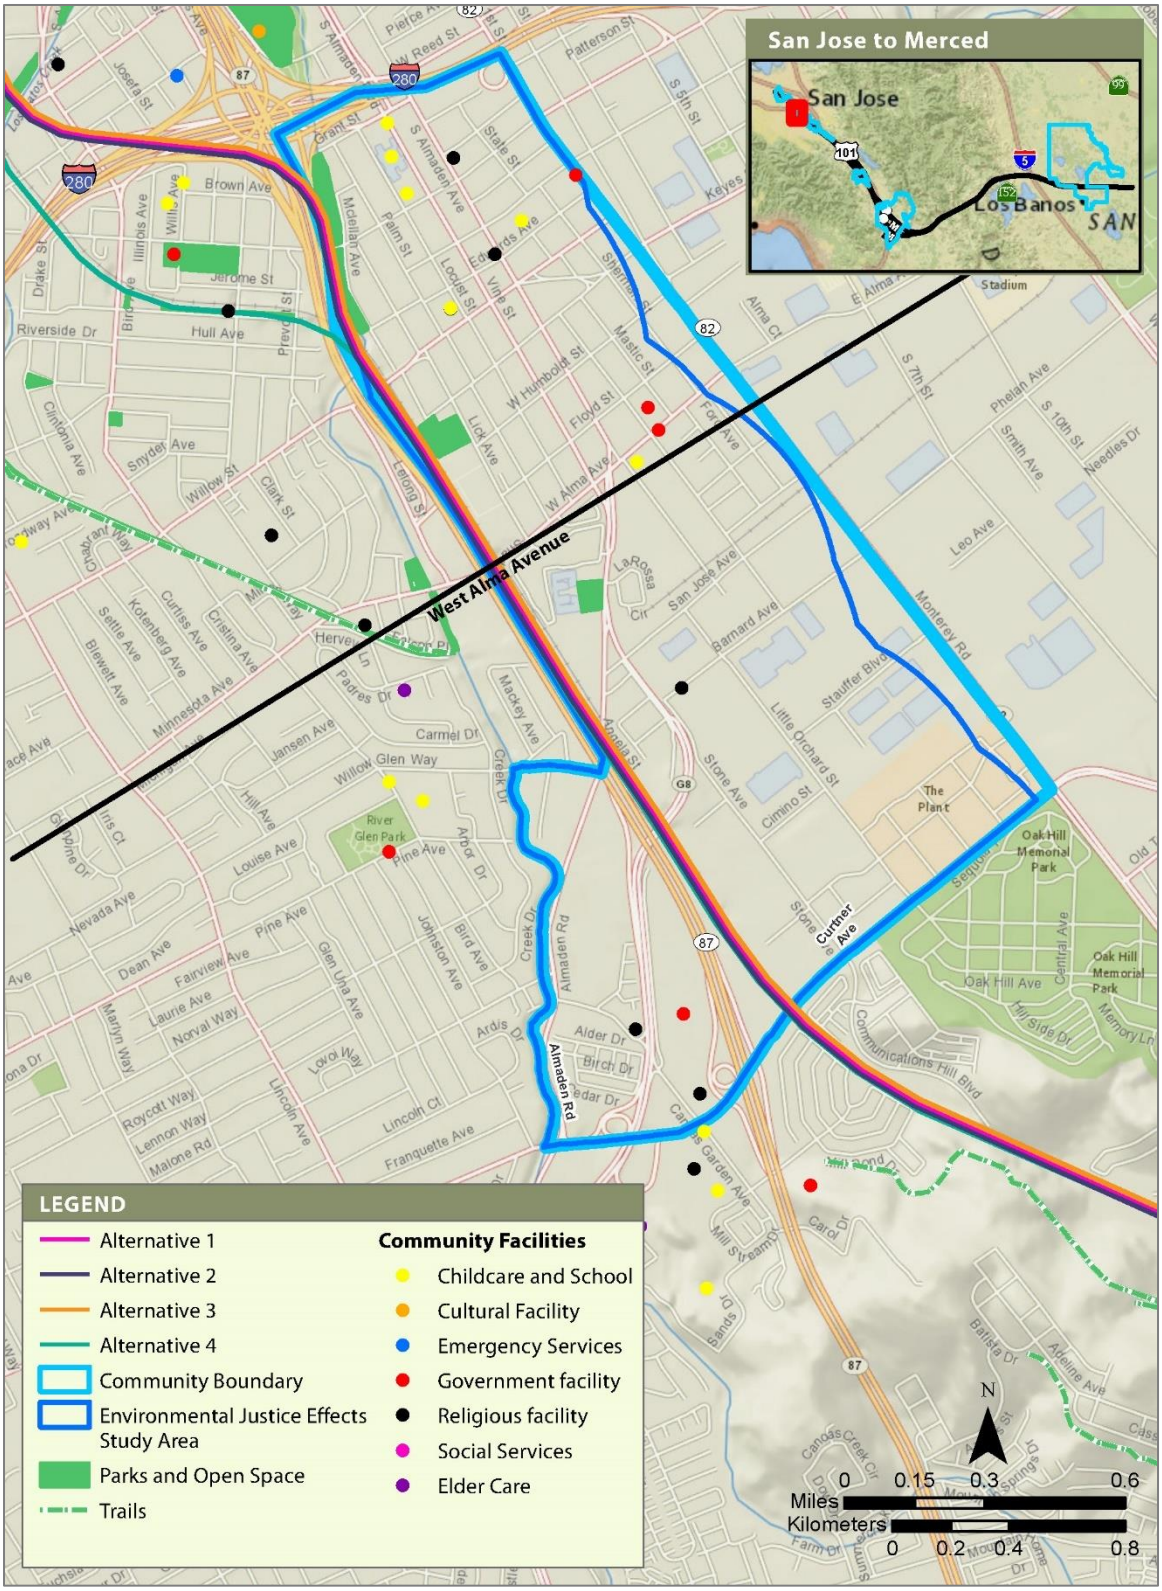

Figure 2-4 Washington/Guadalupe, Tamien, and Alma/Almaden

The community has access to the Guadalupe River Trail and will have access to the future planned Three Creeks Trail. Elementary schools provide playground areas and ball courts, as do Tamien Park, Parque de Padre Matteo Sheedy, and Bellevue Park. Biblioteca Latinoamerica is located on South First Street and encompasses the Washington United Youth Center. The Center for Employment Training, located on Vine Street, provides a variety of job training programs. Sacred Heart Church, built in 1927, provides worship and social services for both the Gardner/Willow Glen and Washington/Guadalupe, Tamien, and Alma/Almaden communities. The Alma Community Center and the Washington United Youth Center provide a variety of services for seniors and teens. A prominent community leader in this area has successfully organized a Latina mother's group, Madre A Madre, a close-knit group that is extremely active in maintaining and promoting community cohesion, education, and organization. They hold weekly in-language gatherings and organize and fundraise by selling homemade Mexican fare and treats.

The SNI supported preparation of the Washington Neighborhood Revitalization Plan Update (City of San Jose 2002b), which focused on the neighborhoods of Washington/Guadalupe, Tamien, and Alma/Almaden, along with Goodyear-Mastic and Cottage Grove. Building on a 1998 plan, the Washington Neighborhood Revitalization Plan Update identified 13 "top ten" actions to address community needs. Among those actions were plans to pursue funding to acquire additional park sites, develop an action program to fund and schedule closure of area alleys, improve recreation facilities at the Alma Senior and Teen Centers, improve storm drainage at selected locations, promote and assist property owners with curb and sidewalk repairs, improve traffic flow and safety, community identification of areas needing street lights or lighting upgrades, enhance existing sports facilities and equipment at Washington School, and underground utility lines. San José's Envision 2040 General Plan (City of San Jose 2020a) also covers these neighborhoods.

Median household income in 2016 was $44,387, less than half that of Santa Clara County as a whole. The share of the community who are high school graduates (26 percent) exceeded that of the County, but rates of college attendance and graduation were lower. Renters comprised 71 percent of households, and 66 percent of households paid rent of more than 30 percent of household income. Thirty-one percent of neighborhood households were classified as overcrowded (Santa Clara County Public Health 2016b).

The Washington/Guadalupe, Tamien, and Alma/Almaden community consists of approximately 55 percent Hispanic/Latino, 5 percent Black, 12 percent Asian, and less than 1 percent each Native American and Alaska Native/Hawaiian/Pacific Islander residents. The total of approximately 73 percent minority residents in these neighborhoods is more than the percentage of minorities in the three-county reference community. Low-income residents represent about 50 percent of this community's population, more than the percentage of low-income residents in the three-county reference community.

2.2.5 South San Jose

The South San Jose community extends approximately 0.5 mile on either side of Monterey Road. It is bounded roughly by Lewis Road on the north, Kingspark Drive and Snell Avenue to Cottle Road and Monterey Road on the west, Metcalf Road on the south, and U.S. Highway (US) 101, Capitol Expressway, and Coyote Road to the east (Figure 2-5). This community is located in the Monterey Corridor Subsection of the RSA, as described in Chapter 5 of the EIR/EIS.

Land uses in the community are predominantly residential north of Blossom Hill Road, between Ford Road and Metcalf Road east of Monterey Road, and between Bernal Road and Metcalf Road west of Monterey Road. Commercial uses are generally located south of Blossom Hill Road, between Blossom Hill Road and Bernal Road on the west side of Monterey Road, and between Blossom Hill Road and Ford Road on the east side of Monterey Road.

Schools in the community include Valley Christian Junior High School and High School, Edenvale Elementary School, Oak Grove High School, Caroline Davis Intermediate School, and Los Pasos Elementary School. The Coyote Creek Trail/Parkway meanders to the west of US 101 south of SR 85, transitioning to the east side of US 101 at SR 85. Other parks include Cottle Park, Danna Rock Park, Ramac Park, and Metcalf Park. Other community facilities include the Boys and Girls Clubs of Silicon Valley and the Edenvale Branch Library.

South San Jose is a suburban community bordered by the Santa Cruz mountains, populated mostly by families, students, and retirees. The community provides many parks and shopping options, but public transit access and walkability are poor. Of the seven neighborhoods comprising South San Jose, the east side, including Seven Trees, Oak Grove, and Blossom Valley, are the least affluent. Similar to the Washington/Guadalupe and Tamien neighborhoods, residents in this area cope with gang activity. A youth group called “Better Tomorrow” organized out of Oak Grove High School and the City Peace Project works to help youth avoid gang activity and focus on education for a better future. Latinx and Vietnamese families reside along the Monterey Road corridor between Senter Road and Bernal Road and attend the schools mentioned above. Monterey Road is a high traffic thoroughfare and crossing this road to and from school is a chief hazard and concern for these families. This corridor is also inhabited by San Jose’s largest homeless population, some of whom are homeless youth who attend area schools.

Like other neighborhoods in San Jose, the City general plan, Envision San José 2040 (City of San Jose 2020a), and the Santa Clara County General Plan (County of Santa Clara 1994) guide development in South San Jose. Several neighborhood associations have organized in the area to bring awareness of policy, education, emergency preparedness, social and environmental issues, and activism to the communities. These organizations include Edenvale Great Oaks Plan Implementation Coalition and Roundtable Neighborhood Association.

The South San Jose community consists of about 45 percent Hispanic/Latino, 4 percent Black, 32 percent Asian, and less than 1 percent each Native American and Alaska Native/Hawaiian/Pacific Islander residents. The total of approximately 82 percent minority population is more than the minority percentage of the three-county reference community. Low-income residents represent 35 percent of the South San Jose population, more than the percentage of low-income residents in the reference community.

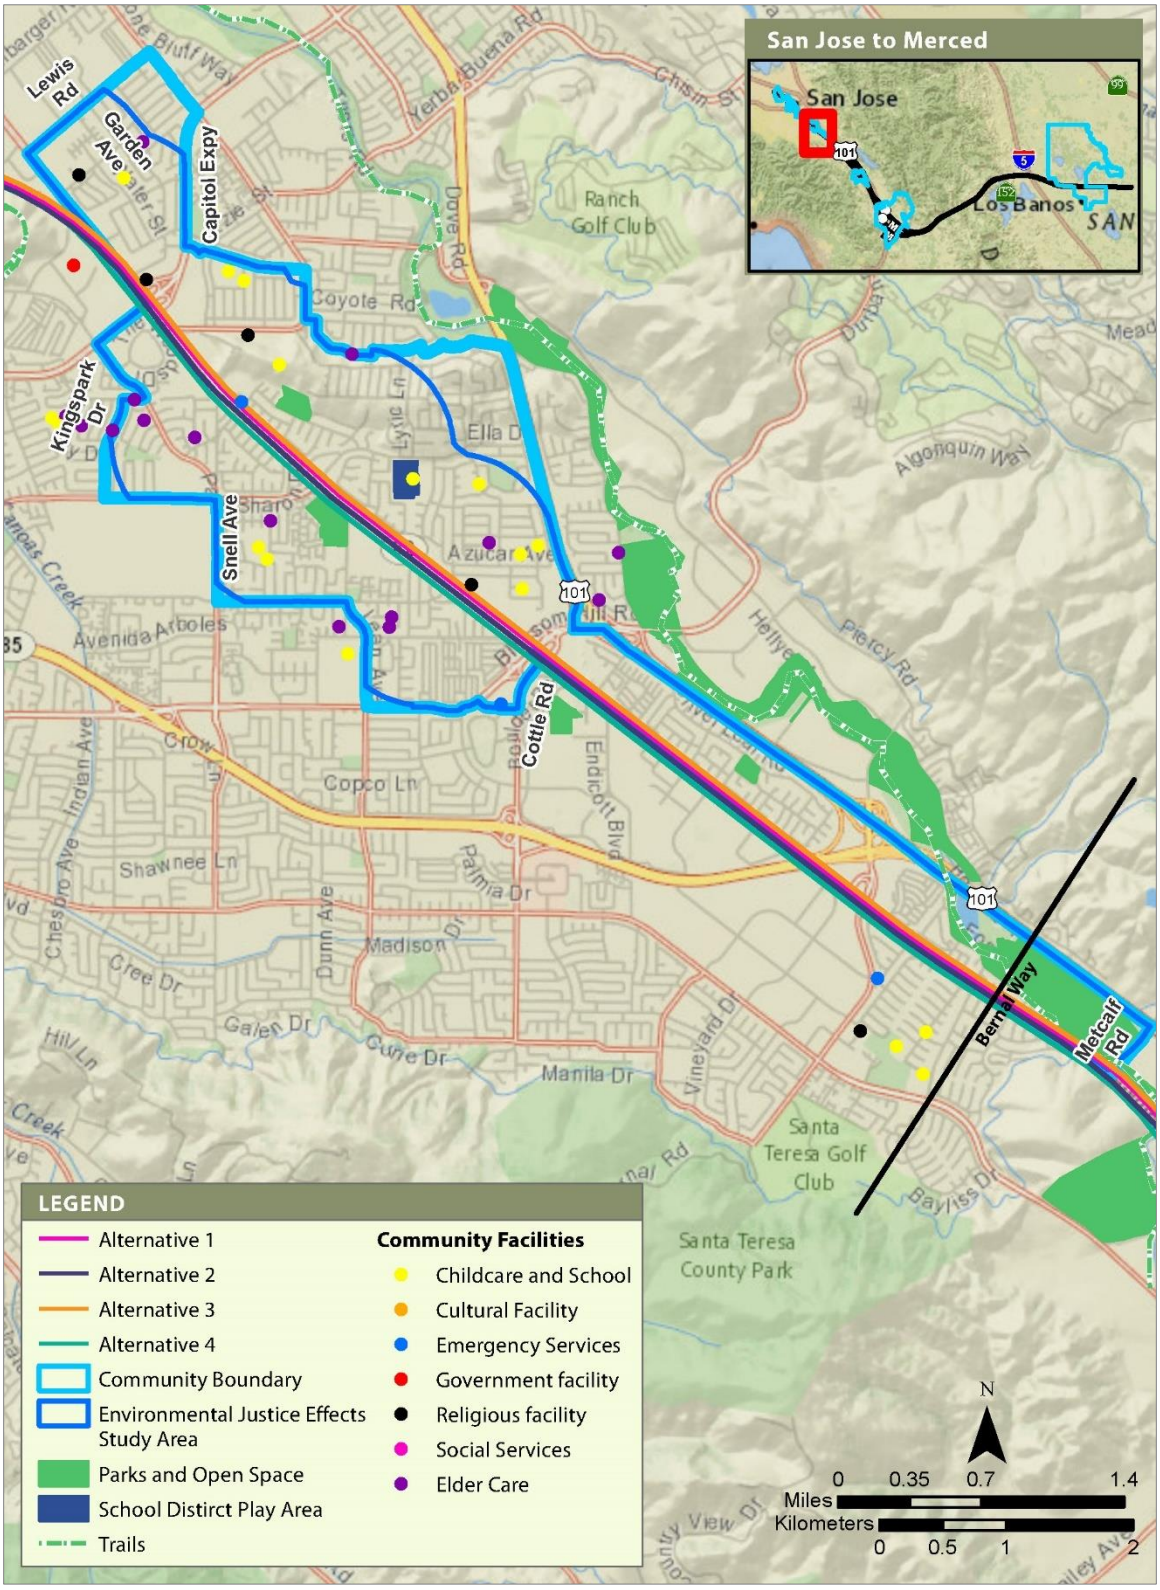

Figure 2-5 South San Jose

2.2.6 Morgan Hill

The City of Morgan Hill is south of South San Jose and the unincorporated Coyote community. The community boundary that includes low-income residents and minority residents is formed by Llagas Road on the north to the west of Monterey Road, Dewitt Avenue on the west to West Edmundson Avenue and east to Monterey Road to where the boundary turns sharply north toward Maple Avenue, to US 101 and Butterfield Boulevard on the east (Figure 2-6). This community is located in the Morgan Hill and Gilroy Subsection of the RSA, as described in Chapter 5 of the EIR/EIS.

Development in Morgan Hill is more prevalent on the west side of US 101, although there is also development on the east side. The Morgan Hill community lies west of Anderson Lake, and there are some agricultural and vacant parcels in the RSA. Morgan Hill is well known for its vineyards and winegrowing, as a part of the Santa Clara Valley designated American Viticultural Area.

Morgan Hill land uses are a mix of commercial, industrial, and residential. US 101 travels north/south on the east side of downtown Morgan Hill, while the Union Pacific Railroad (UPRR) corridor, also north/south, is between Butterfield Avenue and Monterey Road. The HSR alignment would travel through predominantly agricultural areas as it approaches Morgan Hill, transitioning to more suburban residential south of Madrone Avenue. As the HSR alignment proceeds southward under Alternatives 2 and 4, suburban development transitions to denser urban development through downtown Morgan Hill. Distinct neighborhoods have formed on each side of the UPRR corridor and are currently physically divided by the railroad. Under Alternatives 1 and 3, the HSR alignment passes through more suburban and rural areas.

Prominent community assets include the Morgan Hill Community and Cultural Center and Villa Mira Monte. The latter is listed on the National Register of Historic Places and houses the Morgan Hill Museum. Other community facilities include the Morgan Hill Sports Complex, Centennial Recreation and Senior Center, Morgan Hill Dennis Kennedy Aquatics Center, Morgan Hill Recreation Preschool, and Teen Center. Morgan Hill contains several parks, including Galvan Park and Morgan Hill Community Park.

The area includes several places of worship, such as Crossroads Christian Center with its associated school, United Methodist Church, and the Church of the Latter-Day Saints, and schools with playground areas, including Central High School, Shadow Mountain Baptist School, Barrett Elementary, Burnett Elementary, and PA Walsh Elementary. Britton Field, located at East Main Avenue and Hale Avenue, offers playing fields for soccer and baseball.

Public schools in Morgan Hill are administered by the Morgan Hill Unified School District (MHUSD). MHUSD encompasses nearly 300 square miles and serves the ethnically diverse population of Morgan Hill, San Martin, and a small portion of South San Jose. MHUSD serves approximately 8,500 students and is composed of six elementary schools (TK–5), two elementary/middle schools (K–8), one Dual Immersion magnet program (K–8), two middle schools (6–8), two comprehensive high schools (9–12), one continuation high school, and a community adult school. MHUSD provides regular bus service for 1,600 students and special education bus service for 150–200 students (MHUSD 2017).

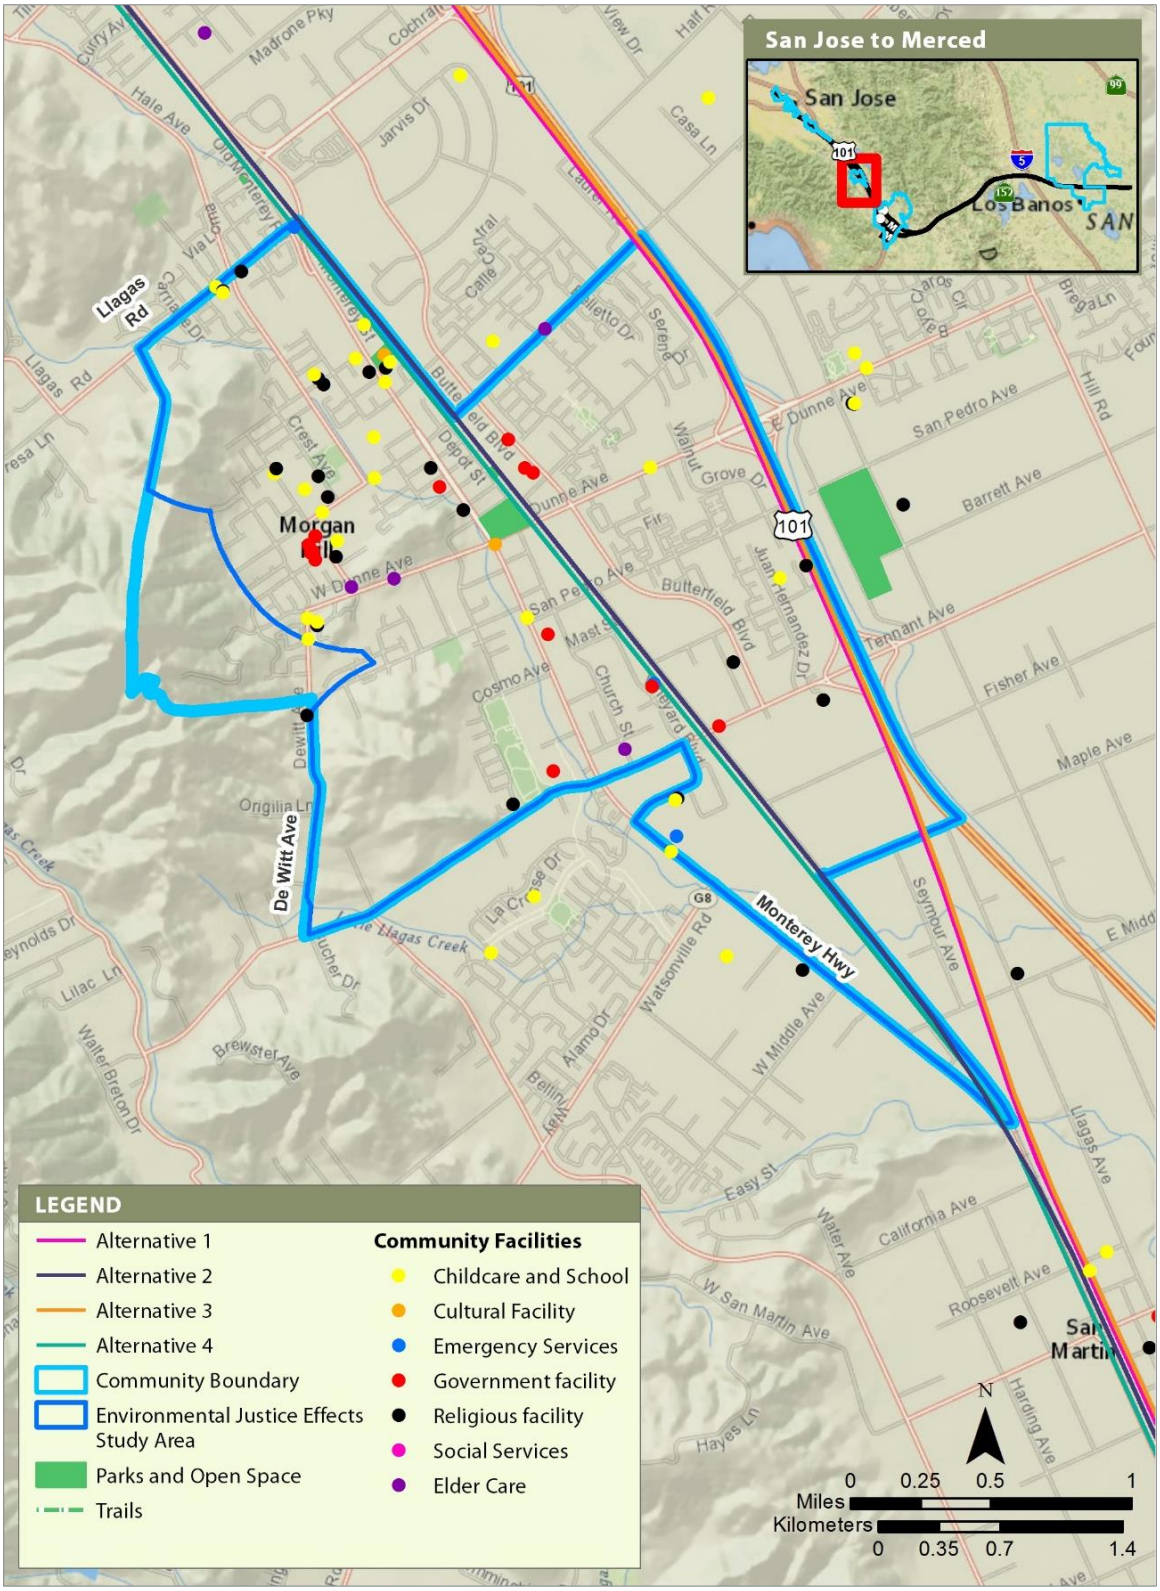

Figure 2-6 Morgan Hill

The City of Morgan Hill's 2035 General Plan (City of Morgan Hill 2016) guides development within the City's 13-square-mile area and its sphere of influence. It describes the City's "small town character, strong sense of community, abundant access to open space and recreational amenities, and ever-growing participation in the Silicon Valley economy." The City also prides itself on being a regional leader in affordable housing, open-space preservation, and environmental stewardship. Historically an agricultural town, the dominant sectors now are manufacturing, health, and educational services, although agriculture still plays an important role with wineries, tourism, u-pick, farmers markets, and other commercial ventures. City policy includes actions to protect and enhance the economic viability of agriculture (City of Morgan Hill 2016). The City also has a Bikeways, Trails, Parks and Recreation Master Plan, a community-driven tool to guide improvements and future development of these assets (City of Morgan Hill 2020a). Community engagement was also the focus of "Engage Morgan Hill," an outreach and education process the City conducted from June 2019 to June 2020 to involve the community in a conversation about services, funding, and priorities (City of Morgan Hill 2020b).

The environmental justice RSA in Morgan Hill has 26 percent of the population defined as low-income, the same as the reference community. Only 29 percent of households are occupied by renters; 60 percent of renter households pay rent of more than 30 percent of household income, a higher percentage than for the county (Santa Clara County Public Health 2016c).

Income-diverse housing is a voter-backed initiative and a fundamental value for the close-knit Morgan Hill community. In keeping with the Association of Bay Area Governments' transit-oriented housing design directives, Morgan Hill created a Priority Development Area downtown adjacent to the Caltrain tracks. The Priority Development Area has the highest density of affordable housing in the City and overlaps with a Plan Bay Area-designated "Community of Concern," defined as census tracts that have a concentration of both minority households and low-income households or that have a concentration of three or more of the eight factors: (1) minority, (2) low income (less than 200 percent federal poverty level), (3) limited English proficiency, (4) zero-vehicle household, (5) senior 75 and older, (6) people with disability, (7) single-parent family, and (8) severely rent-burdened (City of Morgan Hill 2017; Santa Clara County 2017).

The Morgan Hill community consists of about 46 percent Hispanic/Latino, 3 percent Black, 10 percent Asian, and less than 1 percent each Native American and Alaska Native/Hawaiian/Pacific Islander residents. The total of approximately 60 percent minority residents is less than the percentage of minorities in the three-county reference community. Low-income residents represent 36 percent of the population, more than the percentage of low-income residents in the reference community.

2.2.7 Gilroy

The Gilroy community is in South Santa Clara County at the crossing of US 101 and SR 152. The boundaries of this community are formed by Buena Vista Avenue, Las Animas Avenue, and Roop Road on the north; Wren Avenue, Miller Avenue, Mesa Road, and US 101 on the west; Carnadero Creek and Llagas Creek on the southwest to Canada Road, and the hills on the east (Figure 2-7). This community is in the Morgan Hill and Gilroy Subsection of the RSA, as described in Chapter 5 of the EIR/EIS.

The 1.5-square-mile rectangle known as The Old Quad was laid out in the mid-19th century and served as the city's original city limits from its incorporation in 1870 until the first annexation in 1948. Historically, Gilroy's economy has been based on agricultural products and processing. Over the years, prunes, tomatoes, flowers, onions, and garlic have contributed to the economic health of the agricultural industries. Food processing centers have also established themselves in Gilroy, and government centers also employ many residents.

Development in Gilroy is predominantly west of US 101. Land use north of downtown Gilroy consist of single-family residential, commercial, and light industrial. In downtown Gilroy, dense urban commercial and residential uses line both sides of Monterey Road. Surrounding land uses in the downtown Gilroy area range from single-family and multifamily residential to commercial and industrial.

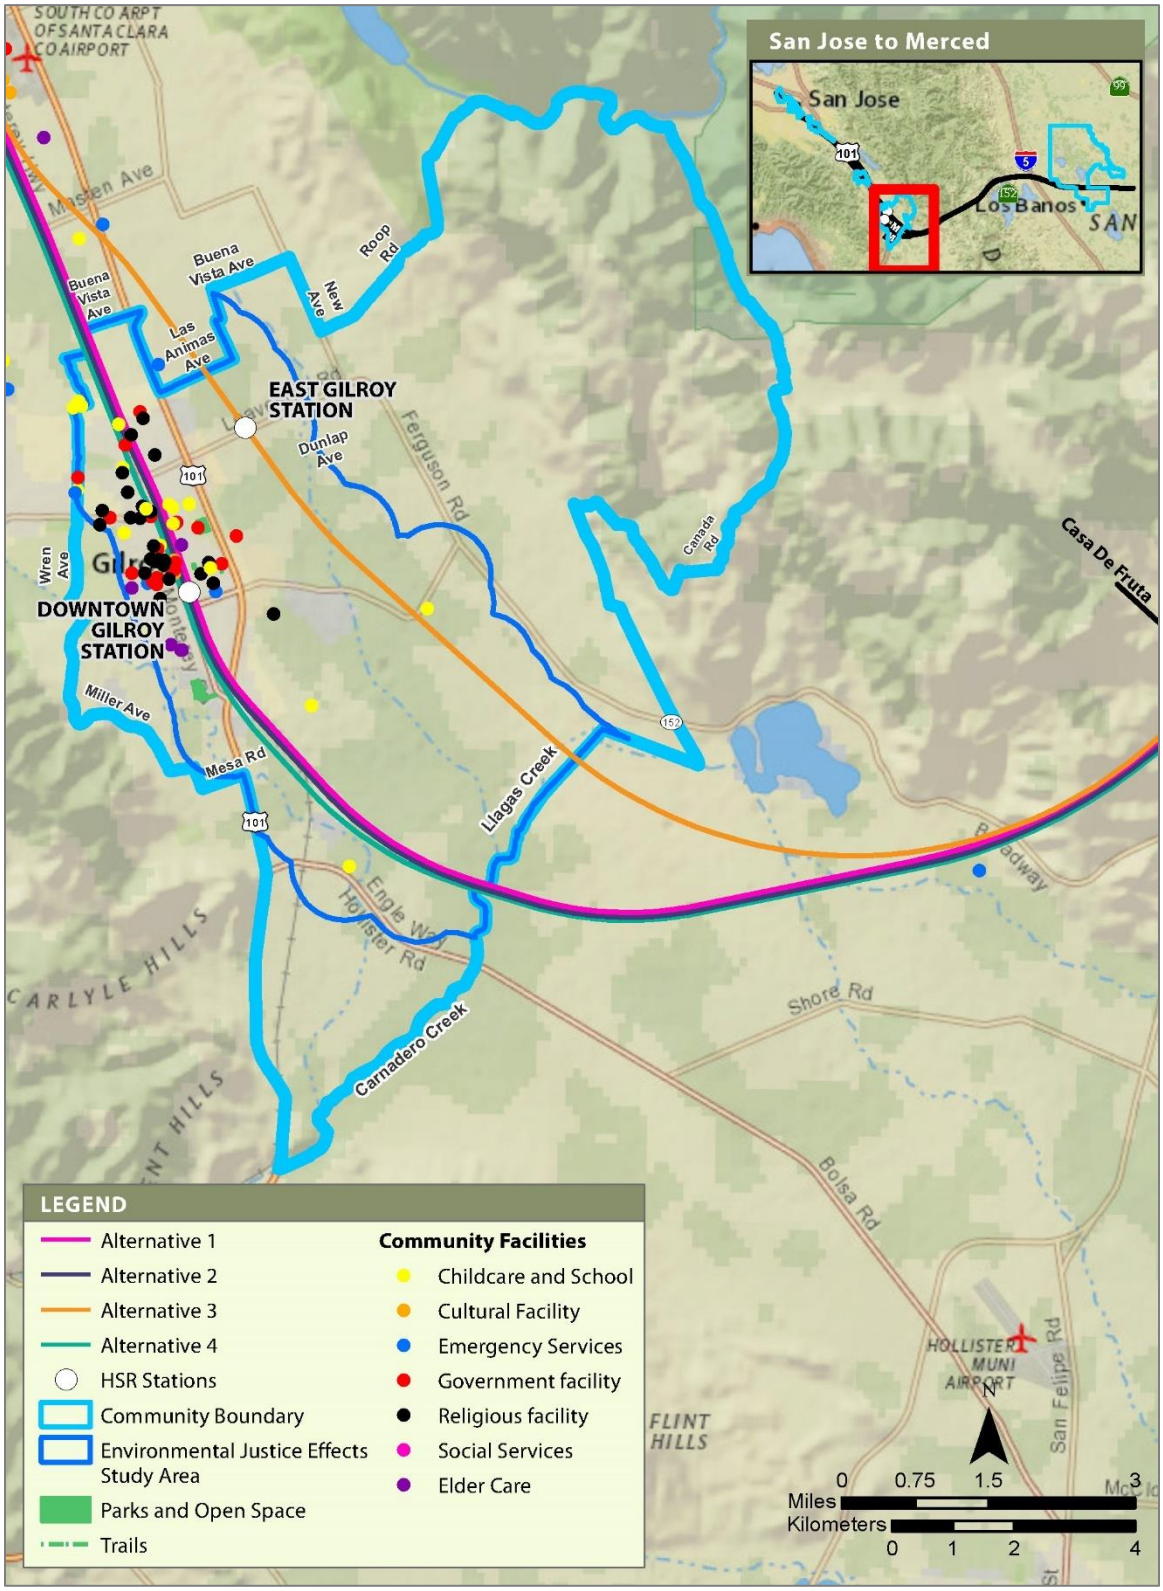

Figure 2-7 Gilroy

Gilroy has a variety of regional community facilities and resources, including St. Louise Regional Hospital, Wheeler Manor (senior residence), and the Gilroy Library. Gavilan Community College, which is set in the foothills that surround the city, serves approximately 5,500 students, 66 percent of whom are minority students (primarily Hispanic). The Outlets at Gilroy, a five-phase retail complex, draws shoppers from all over the San Francisco Bay Area and Central Coast regions. Gilroy has a number of parks ranging from 0.125 acre to 125 acres in size, including Las Animas Park, Miller Park, and San Ysidro Park. Playing fields are available at various schools in the City, including Gilroy Prep (public elementary school), South Valley Junior High School on the east side of the UPRR corridor just north of IOOF Avenue, Brownell Academy Middle School west of the tracks, Gilroy High School, and Ascension Solarsano Middle School. Rebekah Children's Center, which is also located on the east side of the UPRR corridor, north of IOOF Avenue, provides foster and mental health care and homes to children across the community and is situated on land that is registered as a City heritage site. A Head Start branch providing after-school services to children in Gilroy is located behind and to the east of South Valley Middle School. There are also numerous places of worship concentrated in downtown Gilroy, including Gilroy Bible Church; First Church of Christ, Scientist; Gilroy United Methodist Church; Church of Jesus Christ of Latter-Day Saints; and Seventh Day Adventist Church.

Gilroy is famous for its annual Garlic Festival. Agriculture remains important in Gilroy's economy, even as that economy has diversified with light manufacturing, wholesale operations, auto sales, and large retail. The rise of Silicon Valley in the 1990s brought increased home prices and land values along with decreasing unemployment. Downtown businesses, however, suffered in the face of that growth, until revitalization efforts helped bring back smaller-scale commercial activity.

Recognizing that growth and development are regional forces, Gilroy joined with Morgan Hill and Santa Clara County and developed the South County Joint Area Plan to ensure coordination among the three jurisdictions (City of Gilroy 2002). With abundant open space and a backdrop of mountains, Gilroy retains its rural and historical character, with buildings in some neighborhoods dating back to the mid-19th century.

The boundaries of the environmental justice RSA for Gilroy encompass Gilroy's downtown and east side and adjacent areas to the east and west. The demographic characteristics of the east side (which includes downtown) differ from those of Gilroy as a whole. While Gilroy overall had a 2016 median household income of more than $81,000 and unemployment of 4.9 percent, the east side's median household income was just over $36,000 and unemployment was 14 percent. In greater Gilroy, 27 percent of families were below 185 percent poverty, while on the east side, 61 percent of families were below that threshold. Renters occupied 42 percent of Gilroy households and 73 percent of households on the city's east side; similar numbers of renters pay more than 30 percent of household income in rent (57 percent in Gilroy and 60 percent on the east side). East side residents experience about twice as many violent crimes within 1 mile than in Gilroy as a whole (Santa Clara County Public Health 2016d, 2016e).

The Gilroy community consists of approximately 69 percent Hispanic/Latino, 2 percent Black, 4 percent Asian, and less than 1 percent each Native American and Alaska Native/Hawaiian/Pacific Islander residents. The total of 75 percent minority population is more than the percentage of minorities in the three-county reference community. Low-income residents represent 44 percent of the population, more than the percentage of low-income residents in the reference community.

2.2.8 San Joaquin Valley

Because the rural population is sparsely distributed, the census tracts and portions that define the San Joaquin Valley community are quite large and encompass just a few population centers, including Volta, Los Banos, and Santa Nella. Because the study populations are concentrated in Volta and Los Banos, Figure 2-8 displays just those communities and a portion of the surrounding less-developed area. The northern community boundary extends a short distance west of Volta and for about 0.5 mile north of Henry Miller Road from Volta to SR 165. South of Henry Miller Road, which forms the north boundary of the Los Banos portion of the community, Badger Flat Road forms the west boundary. The southwest boundary is defined by Willmott Avenue to SR 165, at the south end turning east toward Ward Road, then following East Pacheco Boulevard on the south to Delta Road on the east, which ends at Henry Miller Road on the north (Figure 2-8). This community is in the San Joaquin Valley Subsection of the RSA, as described in Chapter 5 of the EIR/EIS.

Between I-5 (just north of Santa Nella Village) and Carlucci Road in Merced County, land uses are mostly agriculture-related: orchards, crops, dairy farms, and rural residential. Residential land uses are generally attached to farm and dairy operations. Downtown Los Banos, approximately 3 miles south of the HSR alignment, provides neighborhood-serving commercial opportunities.

Community recreational assets in the San Joaquin Valley community include the Volta Wildlife Area, the Grasslands Ecological Area (GEA), and the Los Banos State Wildlife Area. The HSR alignment crosses through the GEA, which is a large mosaic of freshwater marshes, alkali grassland, and riparian thickets established through collaborative conservation planning between public resource agencies and private duck hunting clubs. The GEA is a designated Important Bird Area for supporting bird populations. Numerous agricultural irrigation canals are present in this area, as are electrical transmission lines, a small substation, the San Luis Wasteway, and the main channel of the San Joaquin River. Agricultural support facilities (barns, silos, and tanks) are directly south of the proposed HSR alignment west of Carlucci Road.

Volta Elementary School is the only school close to the proposed HSR alignment in this area. It houses five permanent classrooms and 13 portable and temporary classrooms. It admits approximately 600 students a year from the Los Banos community, including children of farm workers. The student population is roughly 50 percent low-income and 30 percent English learners. Student academic performance at Volta Elementary School is consistently one of the best in the county based on statewide standardized tests, and a seat at the school is highly coveted and competitive. Due to the limited ingress and egress from the school to Los Banos, traffic and issues with access to and from school that disrupt student learning day-to-day are of chief concern for this school community. Moreover, the school is experiencing an increasing number of medically sensitive students who need quick access to emergency care in Los Banos, heightening these concerns.

The 2030 Merced County General Plan, adopted in 2013 (County of Merced 2013), guides development in the unincorporated areas of the county, such as Santa Nella and Volta. The County published a specific plan for Santa Nella in 2000 (County of Merced 2000). The Merced County Hispanic Chamber of Commerce, founded in 1947, represents and supports Hispanic businesses throughout the county with training, scholarships, networking, and business development opportunities (Merced County Hispanic Chamber of Commerce 2020).

Los Banos is an incorporated city with its own general plan. It is the second largest city in Merced County, with a 2017 population of 39,993. The top three employers are Los Banos Unified School District, Memorial Hospital, and Walmart. Twelve public schools and three private schools serve the city's children, and more than 200 acres of parks and open space provide recreational opportunities. The City's general plan goals and policies include providing an environment that encourages walking and facilitates ways to reduce dependence on auto travel by making alternate modes safer and more convenient. The Los Banos bicycle-pedestrian plan proposes a variety of bicycle and pedestrian policies, projects, and standards to fulfill these goals (City of Los Banos 2018).

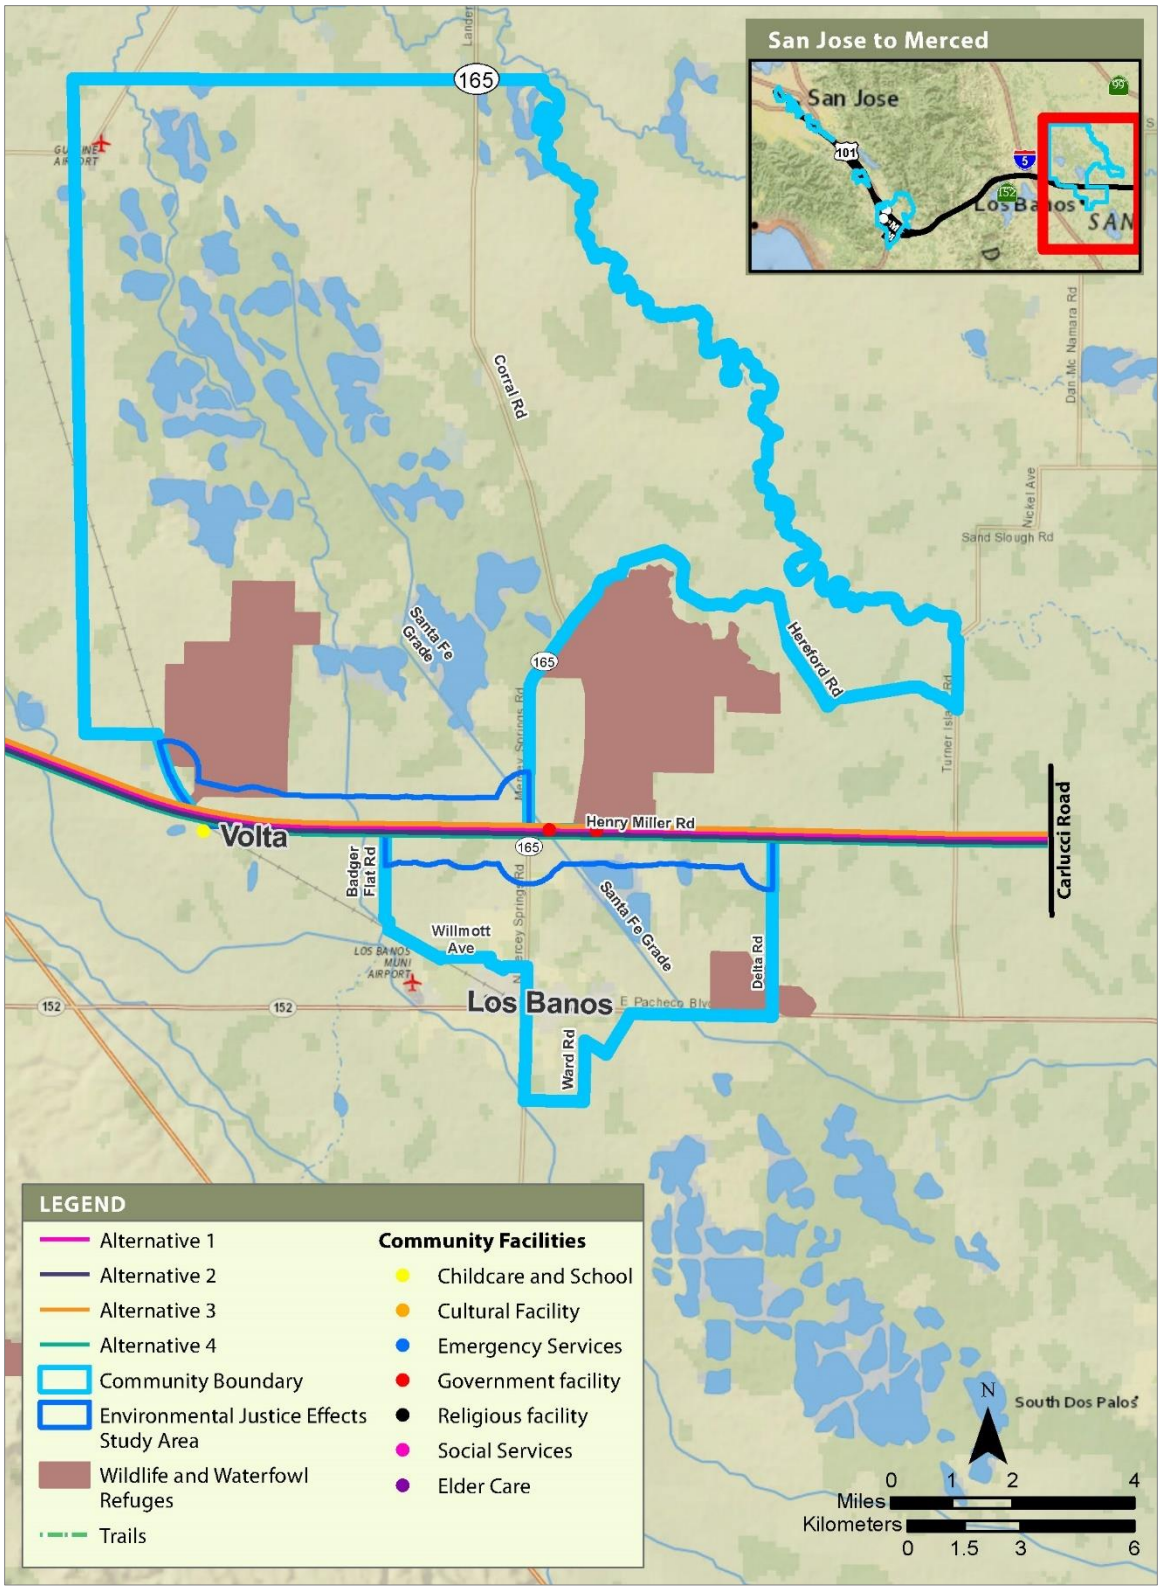

Figure 2-8 San Joaquin Valley

The Los Banos Chamber of Commerce involves itself in both the business and general community. It hosts or participates in events such as spring and fall street fairs, Dads' Night Out, Tomato Festival, and a Christmas parade (Los Banos Chamber of Commerce n.d.). The City of Los Banos Parks and Recreation Division offers youth and adult sports programs and classes; annual community events such as an Egg Hunt, Earth Day, Big Truck Day, and holiday celebrations; summer movies in the park at rotating park locations; and events for seniors (City of Los Banos 2017).

A community survey conducted in 2018 for a ballot measure found that public safety issues such as drug use and abuse, unsafe drinking water, gang violence, homelessness, and unemployment were among participants' top priorities for the City to address; repairing streets and roads was second (FM3 Research 2018).

Santa Nella is an unincorporated community in western Merced County, northwest of Los Banos. In 2000, with a population of about 800, most land in Santa Nella was undeveloped, with about half in agriculture. In 2000, the Specific Urban Development Plan called for growth of low- and medium-density residential, a golf course, and some commercial uses south of Henry Miller Road and west of I-5 (County of Merced 2000). Volta is a primarily residential community of fewer than 300 people located between Santa Nella and Los Banos. Most of the population in Los Banos and Volta are Hispanic.

The San Joaquin Valley community includes low-income populations north of Henry Miller Road, with both low-income populations and minority populations south of Henry Miller Road. Combined, the San Joaquin Valley community consists of about 70 percent Hispanic/Latino, 2 percent Black, 2 percent Asian, and less than 1 percent each Native American and Alaska Native/Hawaiian/Pacific Islander residents. The total of approximately 75 percent minority residents is more than the percentage of minorities in the three-county reference community. Low-income residents in the San Joaquin Valley, defined as persons living in households earning less than 100 percent of the poverty level, represent about 24 percent of the population, slightly more than the percentage of low-income residents in the reference community.

3 PLANNING PROCESS AND IMPROVEMENT EVALUATION

A comprehensive process was undertaken to engage local communities and identify and evaluate potential improvements that could be implemented for the benefit of minority populations and low-income populations to offset residual disproportionately high and adverse effects. This section describes the purpose and trajectory of the process and includes an overview of key steps, including outreach.

The Authority determined that the process should be transparent; arise from the concerns and input of community partners in affected communities, subject to revision and refinement; utilize objective metrics across communities; demonstrate community partner buy-in; and occur parallel to the EIR/EIS process. Specific goals for achieving this overall purpose are described in the following subsections.

3.1 Process Purpose

As discussed above, disproportionately high and adverse effects associated with the project alternatives were identified for minority populations and low-income populations in the following communities.

- Santa Clara/North San Jose
- San Jose Diridon
- Gardner/Willow Glen
- Washington/Guadalupe, Tamien, and Alma/Almaden
- South San Jose
- Morgan Hill
- Gilroy
- San Joaquin Valley

As such, the focus of this process was to identify and evaluate potential improvements within these communities that could offset residual disproportionately high and adverse effects.

3.2 Process Goals

The goals of the improvement planning process are described below.

- **Transparent Process**—The process was intended to be inclusive and to meet the needs of both affected communities and the Authority. The Authority has sought to achieve this goal by involving community partners throughout the process and soliciting their input on community improvements to be evaluated and for review and feedback on the Authority's evaluation. The Authority also shared the definitions and specific criteria to be used for the evaluation at the outset and garnered feedback on those to ensure that the entire process was transparent.
- **Engagement to Identify Improvements**—An important part of the process was to engage stakeholders in affected communities in identifying unmet needs and related potential offsets that could be incorporated into the process evaluating community improvements. Initially the Authority engaged the local cities and counties (in unincorporated areas) to identify existing minority community and low-income community representatives among local community organizations, school associations, social service providers, cultural entities, and others. Some agencies, such as Santa Clara County Health and Human Services, had relationships with local nonprofit and private social service agencies that identified minority community and low-income community representatives as well. Stakeholder input is key to the identification of potential improvements that are aligned with the priorities of affected communities.
- **Incorporate Input into Evaluation**—In addition to asking stakeholders to identify potential improvements, the Authority solicited input on specific community needs and concerns to provide context for specific potential improvements. Input was also solicited from potential implementing partners and community stakeholders on how improvements should be evaluated. Stakeholder input is essential to the evaluation of potential improvements to ensure that the improvements are defined and evaluated in a way that reflects community

needs and priorities of those populations that have historically been marginalized in the decisions around the placement and development of transportation and other facilities.

- **Propose Improvements on Objective Basis**—The evaluation of potential improvements was based on clear criteria. Evaluation criteria were developed by the Authority with input from community stakeholders. Criteria used to evaluate potential community improvements are described in detail below.
- **Foster Agreement and Support**—The process of soliciting improvement ideas and input is ultimately intended to foster agreement between the Authority, its implementing partners, and the affected communities that potential improvements are practicable and would serve prioritized community needs. The goal is also to foster support for the Authority's implementation of recommended improvements as offsetting mitigation to address residual disproportionately high and adverse effects to minority populations and/or low-income populations.

3.3 Improvement Definition and Selection Criteria

3.3.1 Definition of "Community Improvement"

To clarify the focus of the planning process and narrow the range of potential improvement types, the following definition of "community improvements" was developed by the Authority:

> Any upgrading of an existing community facility, structure, function or action, or addition of a facility, structure, function or action that is made solely for the benefit of the local community, including an increase in the capacity, capability, efficiency, duration, function, or action over existing conditions. Community improvements do not include the following: proposed elements of the HSR project; feasible direct mitigation to address significant adverse environmental effects as defined in the project EIR/EIS; improvements mandated by existing local, state, or federal mandates; or improvements fully funded by dedicated existing funding sources.

This definition helped clarify for the Authority and its potential community partners what should and should not be included in the list of potential improvements to ensure that stakeholders could focus their recommendations on those improvements of highest benefit to low-income populations and minority populations.

3.3.2 Evaluation Criteria

The following evaluation criteria were used to screen and evaluate potential community improvements that could offset disproportionately high and adverse project effects on minority populations and low-income populations. After an initial list of potential improvements was developed using the criteria described below, a more refined list of improvements was selected based on their nexus to the disproportionately high and adverse effects remaining after the application of project direct mitigation and consideration of project benefits.

Community improvements that can be supported and/or implemented by the Authority as offsetting mitigation were evaluated and prioritized based on meeting the criteria described in the following subsections.

- **Benefit Intensity**—Improvements must benefit minority populations and low-income populations within communities in a census district defined as containing low-income populations or minority populations greater than the reference community. Improvements should improve community cohesion, identity, livability, economic or educational opportunities, health, and safety. While improvements must maintain a nexus to the residual disproportionately high and adverse effects of the project, when improvements provide community cohesion, identity, livability, economic or educational opportunities, health, and safety benefits, they can help offset these effects even if they do not directly reduce some of those impacts on a one-for-one basis.

- **Relative Number of Beneficiaries**—The relative number of beneficiaries of an improvement was evaluated compared to the other improvements within a specific community.
- **Practicable**—The improvements must be practicable, which is defined as feasible considering technical feasibility, logistical feasibility and implementation, and financial feasibility.
  - Regarding technical feasibility, the improvement must be technically feasible based on available technology and common industry practices.
  - Regarding logistical feasibility and implementation, the improvements can be implemented through the Authority's construction contract(s) or through other means in partnership with local agencies or entities in an achievable time frame without undue scope, schedule, or budget risks to the Authority. For any improvements not directly related to the HSR facility, there must be a local partner to be practicable.
  - Regarding financial feasibility, the level to which the improvement will leverage the Authority's funding with funding from other sources, including other state programs, will be evaluated based on the reasonableness and amount of available other funds. The Authority's funding contributions will supplement but not supplant other available funding sources.
- **Defined Project or Action**—The nature and scope of improvement investment is defined clearly and distinctly in terms of the specific physical improvements (if relevant), beneficial outcomes, implementing mechanisms, costs, and timing.
- **Satisfy Authority Obligations**—The Authority can determine that the proposed improvements have a general relationship to overall project effects, are consistent with the Authority's mission, and are consistent with a statewide objective or program, without setting an undesirable precedent or hardship.
- **Defined Roles and Responsibilities**—This criterion is defined by the degree to which the ownership, implementation, and operation and maintenance roles and responsibilities for proposed improvements are clearly defined and acceptable to assigned entities.
- **Evidence of Agreement**—There should be evidence that the Authority, the local community, and any local responsible agencies involved agree that the improvement would be beneficial and acceptable to the community.
- **Cost-Effectiveness**—The cost-effectiveness of the improvements was evaluated by dividing the cost of the improvement by the number of potential beneficiaries. The cost-effectiveness of the individual improvements was then compared to the cost-effectiveness of the other improvements in the community, and the more cost-effective improvements were rated higher.

While the criteria above were used to evaluate the individual improvements, an additional criterion of ***proportionate*** was used to ensure that improvements should be roughly proportionate to the level of residual disproportionately high and adverse effects on minority populations or low-income populations.

3.4 Initial Community Improvements Concept Development

Initial development of potential improvements occurred in November 2019. For example, the Authority separately developed a program called Connecting Communities Strategies (CCS) aimed at identifying the ways that HSR could advance community goals. The CCS process had at its foundation a comprehensive review of community planning along the HSR corridor. By reviewing capital project lists, planning document implementation activities, and related infrastructure needs across the corridor communities, CCS provided some guidance and structure to the existing and documented needs of the corridor communities.

An initial list of potential improvements was developed drawing from the following sources.

1. **Connecting Communities Strategy**—The CCS represents a series of improvements in communities spanning the HSR alignment that the Authority had gathered during community outreach in the preparation of the Draft EIR/EIS. These improvements stemmed from a statewide planning effort aimed at connecting local communities with state cap-and-trade funding programs with the goal of increasing the competitiveness of local community applications to state grants to fund community projects in disadvantaged communities.
2. **San Jose Strong Neighborhoods Initiative**—The SNI was a partnership between the City of San Jose, the San Jose Redevelopment Agency (RDA), and San Jose's residents and business owners to strengthen the city's neighborhoods by building clean, safe, and strong neighborhoods with independent, capable, and sustainable neighborhood organizations.
3. **Prior Community Input on the Project**—Authority staff identified initial community improvements concepts based on prior engagement with and input from minority community members and low-income community members and representatives during public outreach on the program.
4. **Authority Staff Input**—Authority staff also identified potential community improvements based on knowledge of the HSR alignment, evaluation of the potential effects of each alternative on minority populations and low-income populations on a community-by-community basis, and prior experience and expertise in identifying potential offsets and improvements.

The Authority conducted initial screening of potential community improvements based on the draft evaluation criteria and examples of community improvements case studies. Based on this initial screening effort, Authority staff developed and reviewed a refined list of potential improvements. A revised list was prepared in December 2019 based on feedback from review of the initial potential improvements.

3.5 Community Improvements Outreach, Phase One

After the development of an initial list of potential improvements, a first phase of focused outreach was conducted. The goals of this first phase of outreach (Phase One) were as follows.

- Expand the Authority's understanding of the needs of minority populations and low-income populations.
- Promote understanding of the environmental justice analysis and the process.
- Gather minority community and low-income community ideas for improvements.
- Obtain feedback on the initial list of improvements.

Presentations were made between December 2019 and March 2020 to a multitude of local minority community organizations and low-income community organizations, including community-based service providers, school leaders, community groups, neighborhood associations, churches and other faith-based organizations, and community leaders and representatives, along with public agency representatives. Participants were identified from the stakeholder database, and additional outreach was added as initial contacts led to subsequent and new contacts.

These first engagements were to provide information and data and to provide a process through which local minority community improvement concepts and low-income community improvements concepts would be developed. Information about the requirements for a federal environmental justice EIR/EIS analysis, finding of disproportionately high and adverse effects, and subsequent need to identify minority community improvement concepts and low-income community improvements concepts was explained. Data about the identification, boundaries, and initial naming of the minority communities and low-income communities was shown graphically. The process, with a structure for identifying, developing, and prioritizing improvements across an 85-mile alignment, was described. Other materials provided for review and consideration included the following:

- Sample improvements from national examples, the Authority's own factfinding as memorialized in the CCS, and San Jose's SNI, of implementation
- A template outlining the minimum data requirements for each potential improvement
- A preliminary list of criteria that ties the community improvement concept to the U.S. Presidential Executive Order 12898 goals and objectives, accounts for engineering as well as cost feasibility, and links potential partners bounds the process of developing potential community improvements to federal environmental justice requirements
- A preliminary list of community concept types, as well as specific concepts that were included in planning documents, capital improvement lists, and unfunded priorities
- Explanation of the goals of the process to engage local minority communities and low-income communities to develop community improvements
- Criteria for rating the concepts were also presented because the criteria would allow the Authority to rank improvements across a 90-mile geography with a solid basis for differentiating among potential improvements

During this phase of outreach, which occurred between December 2019 and March 2020, the Authority conducted a total of 48 meetings, including calls and in-person meetings with potential partners and community presentations. Outreach during this phase included gathering feedback from potential implementing partners (i.e., those entities potentially able to partner with the Authority on community improvements implementation). Potential implementing partners included school districts, cross-jurisdictional agencies, municipalities, and a few selected community organizations across the affected communities.

3.6 Expanded Improvements List

The list of potential improvements developed internally was expanded substantially to include the improvements suggested by cities, agencies, community organizations, and community representatives during Outreach Phase One. This expanded list, which consisted of 211 potential improvements, was then subject to another round of screening using the evaluation criteria to determine which improvements would then be developed and considered in greater detail.

3.7 Concepts Screened Out

Concepts screened out and not carried forward for detailed evaluation included the following.

- **Improvements that do not meet the Authority's criteria**. Potential improvements were screened out if they were already part of the project, were potential feasible direct mitigation for project effects, were already fully funded, were already completed or would be completed soon, or otherwise fully mandated by existing requirements not related to the project.
- **Improvements that do not have the potential to meet most of the evaluation criteria**. Improvements were screened out when existing information could readily support a determination that they would not meet most of the criteria.
- **Improvements unlikely to provide benefits primarily to minority populations or low-income populations affected by the project**. Improvements that were not focused on the affected minority communities and low-income communities affected by the project or that would provide benefits so broadly that the bulk of the community improvements would accrue to communities or individuals not affected by the project were screened out. Improvements that provided a limited or unclear benefit to affected minority communities and low-income communities were screened out.
- **Improvements that would be impracticable**. Improvements that had substantial technical or logistical challenges to overcome such that they may ultimately be impracticable were screened out. Regarding financial feasibility, improvements that on their own would consume a nonproportionate share of project budget were screened out.

- **Improvements insufficiently defined to evaluate.** Improvements were screened out if they were insufficiently defined at the time of screening and/or would require lengthy amounts of time in order to define adequately to support an evaluation in a timely manner to support completion of the Final EIR/EIS.
- **Improvements that would not satisfy Authority obligations**. Improvements that were outside of or inconsistent with the Authority's mission to provide improved transportation options while offsetting project effects were screened out. Ongoing operational subsidy of public agency or private organization operations or actions was found to be inconsistent with the Authority's policies and obligations. Improvements that would set a precedent that would hinder the statewide implementation of the HSR system were screened out. Improvements that lacked a reasonable nexus to the project's disproportionately high and adverse effects on local minority populations and low-income populations were screened out.
- **Improvements that do not have clearly defined roles and responsibilities.** Improvements for which the implementing roles and responsibilities were unclear such that the path forward to implementation was uncertain were screened out.
- **Improvements that appear unlikely to have community support or agreement**. Improvements that had been previously stopped from implementation due to community concerns were screened out. Improvements that may engender substantial controversy (and thus may not be supported by most of the affected community) were screened out. Improvements not supported by potential implementing partners that would need to implement the improvement were screened out.
- **Improvements that are not proportionate to the level of effects of the project**. Improvements that, on their own, would require a level of Authority involvement or funding that was out of proportion to the project effects were screened out.
- **Improvements combined for evaluation.** Certain potential improvements were combined with others where they were closely related or duplicative to avoid redundancy and overlap.

As a result of this screening process, 104 improvements were not carried forward. Potential improvements that were carried forward for further evaluation included 107 community improvements. Of these, 38 are proposed as offsetting mitigation to offset disproportionately high and adverse effects on minority populations and low-income populations. These improvements are described in Chapter 4, Proposed Offsetting Mitigation Measures.

3.8 Offsets Development and Evaluation

Development and evaluation of 104 potential improvements began following completion of Outreach Phase One and continued through June 2020. Community improvements were developed based on input from potential partners and community stakeholders to ensure that those carried forward for funding and implementation would meet community needs and priorities. After development of community improvements based on initial concepts gathered during Outreach Phase One, potential improvements were evaluated based on the set of established evaluation criteria, as described above.

3.8.1 Development of Potential Community Improvements

After Outreach Phase One, community improvements in the initial concept development phase were developed, refined, consolidated, or in some cases eliminated to determine a set of improvements to be evaluated. Refinements included expanding potential improvement ideas by gathering additional information from existing local and regional plans where certain improvements were described more fully. Improvements development also assessed the benefits to minority populations and low-income populations, the relationship of each potential improvement to project effects, and the consistency of potential improvements with local plans and policies. Preliminary cost estimates were also prepared for each potential improvement. Further, to help gauge the extent to which a given improvement would benefit minority populations and low-income populations within a given community, each improvement was

mapped relative to the location of the minority populations and low-income populations along the HSR alignment.

3.8.2 Evaluation of Community Improvements

After profiles were developed for potential improvements, they were evaluated relative to the refined set of evaluation criteria, as listed above. The evaluation for each potential improvement against the evaluation criteria was included in each profile. The evaluation informed the identification of improvements to potentially offset residual disproportionately high and adverse effects.

3.9 Community Improvements Outreach, Phase Two

After completing the initial screening and evaluation of the community improvements vetted during Outreach Phase One, the Authority undertook a second phase of outreach to gather feedback from potential implementing partners on specific improvements to ensure that the improvement profiles correctly represent the input gathered during Outreach Phase One and collect any additional information pertinent to the potential improvements, such as the roles and responsibilities of the agencies and entities that would be involved in design and implementation of the improvements. Feedback was also sought on the scoring of the potential improvements and the ranking of improvements relative to local priorities.

To solicit this feedback, local jurisdictions and agencies and certain other nongovernmental organizations were presented with the improvement profiles pertinent to their communities, jurisdictions, or areas of focus, along with the preliminary scoring and evaluation of each community improvement. The Authority scheduled meetings with potential implementing partners to discuss their perspectives on the evaluation of improvements, to gather feedback, and to better understand local priorities. The Authority met with the following jurisdictions, agencies, and groups during Outreach Phase Two.:

- City of Santa Clara
- City of San Jose (including the Parks and Recreation Department and the Department of Transportation)
- City of Morgan Hill
- City of Gilroy
- Local school districts (for school improvements in San Jose, Morgan Hill, Gilroy, and Los Banos)
- Santa Clara County Parks and Recreation Department (for County parks)
- Rebekah Children’s Services (for improvements to the organization’s facility)
- Rocketship Public Charter School (for improvements at a Rocketship Mateo Sheedy School)
- VTA (for transit and certain other transportation improvements)
- Center for Employment Training, Mission College, and Gavilan College (for potential job training and other improvements specific to these institutions)
- African American Community Service Agency (for improvements at the organization’s facility)
- Santa Clara County Health and Human Services and HomeFirst (for homeless services and housing initiatives)

3.10 Identification of Potential Community Improvements as Offsetting Mitigation

After Outreach Phase Two, the process was paused to consider what additional direct mitigation or improvements could be incorporated into the EIR/EIS to avoid or minimize disproportionately high and adverse effects and to conduct a more thorough analysis of the effects of project

benefits. Subsequent to this additional analysis, the list of potential improvements as offsetting mitigation candidates was refined to include those community improvements with a reasonable nexus to the residual disproportionately high and adverse effects of the project that would remain after application of additional direct mitigation and consideration of project benefits. These potential improvements, as well as additional improvements identified through the Phase Three outreach (see discussion below) are listed in Chapter 4, Proposed Offsetting Mitigation Measures, and described in profiles in Attachment A.

3.11 Community Improvements Outreach, Phase Three

In September 2021, the Authority conducted a total of 26 virtual meetings with Implementing Partners, Community Organizations, and Interested Parties and Other Stakeholders in eight communities within the San Jose to Merced Project Section, including Santa Clara/North San Jose, San Jose Diridon, Gardner/North Willow Glen, Guadalupe/Washington/Tamien/Alma/Almaden, South San Jose, Morgan Hill, Gilroy, and San Joaquin Valley, where the EIR/EIS analysis had indicated that low-income populations and minority populations may be subject to disproportionately high and adverse effects from the project alternatives. Generally, the objectives of these meetings were to:

- Explain the updated environmental justice analysis for the EIR/EIS, including updated and new direct mitigations, consideration of benefits, and potential community improvements.
- Share preliminary conclusions related to the updated analysis.
- Gain feedback on the updated analysis, preliminary conclusions, and potential community improvements under consideration as offsetting mitigation.

The Authority classified stakeholders engaged into three general categories: (1) Implementing Partners, (2) Community Stakeholders, and (3) Interested Parties and Other Stakeholders within each of the affected communities to share and discuss the analysis and provide an opportunity for feedback (see Volume 2, Appendix 5-B, Environmental Justice Engagement Summary Report, Attachment D, Environmental Justice Outreach, September 2021, for definitions of each category).

The Authority communicated closely with Partners, Stakeholders, Interested Parties and Other Stakeholders before the meeting series, sharing flyers, community surveys, and proposed content. Partners, Stakeholders, Interested Parties and Other Stakeholders received a community-specific and comprehensive packet of materials (in English, Spanish and Vietnamese and that was ADA-compliant) that was sent on September 3, 2021, related to the environmental justice analysis, including:

- Community Survey
- Environmental Justice Analysis Process Summary
- Summary of Updates to the EIR/EIS Environmental Justice Analysis
- Environmental Justice Community Summary
- Meeting Agenda and Presentation

The Authority requested all review the materials and provide feedback via electronic community survey, letter, or other written form by October 1, 2021. The feedback gathered during this phase has been evaluated and incorporated into the Final EIR/EIS. A detailed summary of outreach, outreach materials, and copies of the input from this outreach cycle are presented in Volume 2, Appendix 5-B, Attachment D.

4 PROPOSED OFFSETTING MITIGATION MEASURES

The improvements listed below in Table 4-1 are proposed as offsetting mitigation measures to offset disproportionately high and adverse effects on minority populations and low-income populations due to their reasonable nexus to project effects and ability to provide substantial benefits to minority populations and low-income populations within the communities wherein these effects would occur. These improvements were chosen from the larger list of improvements, which is described in the next section. In some cases, the potential improvements were refined from prior iterations to be more targeted improvements with a greater nexus to project impacts. Profiles providing additional detail about each of these offsetting mitigation measures is included in Attachment A.

To be considered for Authority implementation as offsetting mitigation measures, potential community improvements were required to have a reasonable nexus, or relationship, to project effects. A community improvement has a "reasonable nexus" if it may reasonably offset a specific identified disproportionately high and adverse effect on the community such as but not limited to community cohesion, visual, aesthetics, or noise. Community benefits can be demonstrated through an analysis that validates the offsetting reduction in disproportionately high and adverse effects or through community agreement where the impacted community accepts the benefit of the improvement as an offsetting mitigation measure for disproportionately high and adverse effects.

Authority funding or implementation of these offsetting mitigation measures is contingent on the California High Speed Rail Authority Board approval and availability of funds for construction

Table 4-1 Summary of Proposed Offsetting Mitigation Measures

Community	Proposed Measure	Original Source for Idea	Input Provided during Outreach	Reasonable Nexus to Residual DHAEs for Project Alternatives (including consideration of location)	Alternatives
Southern Santa Clara/Northern San Jose	SC-NSJ-OMM#1: Noise Treatments for Up to Three Residential Buildings along Caltrain Corridor to Address Existing Noise	HomeFirst; Next Door Solutions	Existing train noise Noise disrupting an already challenging living environment	Community noise improvement offsets noise DHAE in Southern Santa Clara/Northern San Jose.	1, 4
Southern Santa Clara/Northern San Jose	SC/NSJ-OMM#2: El Camino Real and Benton Street Safety Improvements	City of Santa Clara	City of Santa Clara stated that crossing improvements are needed at this location to provide safety in pedestrian and bicycle access to the Caltrain Santa Clara Station which will provide access via Caltrain to HSR.	Improvement agreed to by community as helping to offset project effects.	1, 2, 3, 4
Southern Santa Clara/Northern San Jose	SC/NSJ-OMM#3: Streetscape Improvements	City of Santa Clara	City of Santa Clara stated that community improvements would help to offset other project effects.	Investment in community aesthetics partially offsets visual aesthetics DHAE in San Jose Diridon area (Alternatives 2, 3).	2, 3

Community	Proposed Measure	Original Source for Idea	Input Provided during Outreach	Reasonable Nexus to Residual DHAEs for Project Alternatives (including consideration of location)	Alternatives
San Jose Diridon	SJD-OMM#1: Streetscape Improvements to Delmas Neighborhood	Strong Neighborhood Initiative	Visual quality Unsightly streetscapes Poor condition of streets and sidewalks Lack of street lighting Bleak and uninviting street frontages Deferred maintenance Streets that dead-end at I-280 have no secure fencing, allowing easy access to unsupervised areas under the freeway	Investment in community aesthetics partially offsets visual aesthetics DHAE in San Jose Diridon area.	1, 2, 3
San Jose Diridon	SJD-OMM#2: Noise Treatments for Certain Residential Buildings along SR 87/I-280 to Address Existing Noise	Authority staff developed based on community concern re: noise	Traffic Noise and vibration	Community noise improvements offsets noise DHAE in San Jose Diridon area.	4
San Jose Diridon	SJD-OMM#3: Reestablish Inez Jackson Library at the African American Community Service Association (AACSA) Community Center and Center Amenities	AACSA	AACSA identified a need to make the library materials on civil rights accessible to the community and to improve the community center space.	Measure provides quiet space as a refuge from project and existing noise in San Jose Diridon area, a publicly accessible access to civil rights historical documents, and improved community gathering space.	1, 2, 3, 4

Community	Proposed Measure	Original Source for Idea	Input Provided during Outreach	Reasonable Nexus to Residual DHAEs for Project Alternatives (including consideration of location)	Alternatives
Gardner/Willow Glen	GWG-OMM#1: Gardner Elementary Noise Treatments (if VTA I-280 Soundwalls Project is not advanced)[1]	San Jose Unified School District	Existing traffic noise	School noise improvements offsets noise DHAE in Gardner/Willow Glen area	4
Gardner/Willow Glen	GWG-OMM#2: Noise Treatments for Certain Residential Buildings along SR 87/I-280 to Address Existing Noise	Representative Lofgren/Authority staff based on community concern re: noise	Existing traffic noise	Community noise improvements offsets noise DHAE in Gardner/Willow Glen area.	4
Gardner/Willow Glen	GWG-OMM#3: Fuller Park/Fuller Avenue Recreational Improvements	City of San Jose	Community concerned about the effects of the project on Fuller Park and recommend improvements to help maintain this community resource.	Measure supported by community and City of San Jose. Provided for general community welfare (no park DHAE identified in community).	4
Washington/Guadalupe/ Tamien/Alma	WGTA-OMM#1: Community Art in Community/Local Murals on Publicly Accessible Project Structures (Such as Viaduct Footings)	Community site walk	Increase enjoyment of community Improve physical appearance Promote/maintain sense of community pride	Community aesthetic/character improvement partially offsets visual aesthetics DHAE in Washington, Guadalupe, Tamien, Alma.	1, 2, 3

[1] Santa Clara VTA's I-280 Soundwalls Project is currently proposing to construct soundwalls on I-280 between State Route 87 and Los Gatos Creek including adjacent to the I-280 southbound lanes adjacent to the Gardner Elementary School. This project is scheduled to go through environmental clearance from 2020 to 2022, design and engineering in 2022 and 2023, and construction between 2023 and 2024.If the I-280 Soundwalls Project is advanced, then GWG-OMM#1 would be redundant with the soundwall project, provided a soundwall is placed adjacent to the southbound I-280 lanes such that is reduced traffic noise for the Gardner Elementary School. In that instance, GWG-OMM#1 allows for the funds for noise treatments at the school to instead be provided to VTA to support the I-280 Soundwalls Project, provided the soundwalls installed would benefit the Gardner Elementary School.

Community	Proposed Measure	Original Source for Idea	Input Provided during Outreach	Reasonable Nexus to Residual DHAEs for Project Alternatives (including consideration of location)	Alternatives
Washington/Guadalupe/ Tamien/Alma	WGTA-OMM#2: Streetscape Improvements (Goodyear, Humboldt, Floyd)	Strong Neighborhood Initiative/Guadalupe Washington Neighborhood Association	Pedestrian and bicycle safety Pedestrian dead zones Need for streetscape improvements	Investment in community aesthetics partially offsets visual aesthetics DHAE in Washington, Guadalupe, Tamien, Alma.	1, 2, 3
Washington/Guadalupe/ Tamien/Alma	WGTA-OMM#3: Noise Treatments for Certain Residential Buildings along SR 87 to Address Existing Noise	Authority staff based on community concerns re: noise	Noise along I-280 and SR 87 Increased traffic through neighborhood from cars traveling to and from downtown San Jose and SR 87	Community noise improvements offsets noise DHAE in Washington, Guadalupe, Tamien, Alma.	4
Washington/Guadalupe/ Tamien/Alma	WGTA-OMM#4: Rocketship Matteo Sheedy Public Address System Upgrade	Rocketship	School experiences disruption to operations due to existing noise (freeway traffic, airplane flyover).	Community noise improvement offsets noise DHAE in Washington, Guadalupe, Tamien, Alma (Alternative 4).	4
Washington/Guadalupe/ Tamien/Alma	WGTA-OMM#5: Tamien Park Sports Field Netting	City of San Jose	Ballfields adjacent to railroad right of way could result in individuals entering right of way to chase lost balls.	Measure will enhance safety for community park adjacent to right-of-way.	4
South San Jose	SSJ-OMM#1: Landscaping Improvement Elements of Monterey Highway Grand Blvd.	CCS/San Jose General Plan (City of San Jose 2020a); Authority staff based on prior City planning	Visual quality	Landscaping improvements to partially offset visual aesthetic DHAE in South San Jose.	1, 2, 3
South San Jose	SSJ-OMM#2: Monterey Road Pedestrian/Bicycle Overpasses at Skyway, Branham, and Chynoweth	Authority based on community concerns re: crossing safety	Pedestrian safety Need for additional pedestrian bridges	Safety improvement offsets emergency vehicle response time DHAE in South San Jose.	4

Community	Proposed Measure	Original Source for Idea	Input Provided during Outreach	Reasonable Nexus to Residual DHAEs for Project Alternatives (including consideration of location)	Alternatives
South San Jose	SSJ-OMM#3: Noise Treatments for Certain Residential Buildings along US101 to Address Existing Noise	Authority staff based on community concerns re: noise	Community concern over noise effects	Community noise improvements offset noise DHAE in South San Jose	4
South San Jose	SSJ-OMM#4: Caroline Davis Intermediate School All Weather Turf and Track	Oak Grove Unified School District	School field not only used by students but also used extensively as a community by the surrounding neighborhoods, especially during recent COVID-19 emergency. Improvement would enhance year-round recreational opportunity for students and community	Community supported improvement provides amenity for students, parents, and general community to offset general effects of project alternatives.	1, 2, 3, 4
Morgan Hill	MH-OMM#1: Park/Trail Under Viaduct	Authority staff per community concern/interest/City of Morgan Hill comment on Draft EIR/EIS	Connectivity Visual quality Community cohesions	Park/trail under viaduct helps to improve local neighborhood aesthetics and sense of place in areas with the viaduct	1, 3
Morgan Hill	MH-OMM#2: Railroad Avenue Complete Streets	Authority staff per community concern/interest	Connectivity Visual quality	Complete Streets includes landscaping which will partially offset visual aesthetic DHAE in Morgan Hill	2
Morgan Hill	MH-OMM#3: Noise Treatments for Certain Residential Buildings along US101 to Address Existing Noise	Authority staff based on community concerns re: noise	Community concern over noise effects	Community noise improvements offset noise DHAE in Morgan Hill	4

Community	Proposed Measure	Original Source for Idea	Input Provided during Outreach	Reasonable Nexus to Residual DHAEs for Project Alternatives (including consideration of location)	Alternatives
Morgan Hill	MH-OMM#4: Fund Master Plan Design (30%) for Caltrain Station Access and Pedestrian Undercrossing	City of Morgan Hill	City of Morgan Hill has advocated for a robust undercrossing connected to landscaping and pedestrian/bicycle approaches to foster connectivity.	Community supported study to evaluate improvements above and beyond project proposed undercrossing. If ultimately implemented, could provide transportation connectivity and community cohesion benefits.	2, 4
Morgan Hill	MH-OMM#5: Fund School Bus Route Study	Morgan Hill Unified School District	School District expressed concern about potential delays to school buses due to increased gate down time with Alternative 4.	Community supported study to evaluate ways to improve school bus transit, which can help students and schools with operations.	4
Morgan Hill	MH-OMM#6: New Park South of Butterfield	City of Morgan Hill	City of Morgan Hill expressed that Alternative 2 would have substantial effects on the character and aesthetics of Morgan Hill and requested inclusion of this measure in comments on the Draft EIR/EIS.	Community park will partially offset visual aesthetics DHAE in Morgan Hill (Alternative 2).	2
Morgan Hill	MH-OMM#7: New Park North of El Toro Fire Station	City of Morgan Hill	City of Morgan Hill expressed that Alternative 2 would have substantial effects on the character and aesthetics of Morgan Hill and requested inclusion of this measure in comments on the Draft EIR/EIS.	Community park will partially offset visual aesthetics DHAE in Morgan Hill (Alternative 2).	2

Community	Proposed Measure	Original Source for Idea	Input Provided during Outreach	Reasonable Nexus to Residual DHAEs for Project Alternatives (including consideration of location)	Alternatives
Morgan Hill and Gilroy	MH/G-OMM#1: Affordable Housing Investment	Santa Clara County Planning Department, Center for Employment Training, HomeFirst	Need for affordable housing Housing scarcity Increased homelessness	Helps to offset affordable housing adverse effects due to Alternative 2 in Morgan Hill and Gilroy where there is inadequate residential relocation availability (Residential Displacements DHAE)	2
Gilroy	G-OMM#1: Sidewalk and Curb Improvement	City of Gilroy	Need for enhanced safety Need for improved connectivity	Safety improvement offsets emergency vehicle response time DHAE in Gilroy.	4
Gilroy	G-OMM#2: Bikeway Improvements (IOOF Ave., Monterey Road, 6th Street, 4th Street, Alexander Street)	CCS/Gilroy Station Area planning	Need for improved bicycle and pedestrian circulation and facilities	Safety improvement offsets emergency vehicle response time DHAE in Gilroy.	4
Gilroy	G-OMM#3: Neighborhood Street Lighting	City of Gilroy	Need to replace streetlights that do not meet City standards	Safety improvement offsets emergency vehicle response time DHAE in Gilroy.	4
Gilroy	G-OMM#4: Murray Avenue Sidewalk Gap Closure Project	City of Gilroy	Need to close sidewalk gaps to improve pedestrian access	Safety improvement offsets emergency vehicle response time DHAE in Gilroy.	4
Gilroy	G-OMM#5: IOOF Bicycle/Pedestrian Overcrossing and Complete Streets	Authority staff based on prior community interest in this overcrossing	Need to enhance student safety Improve connectivity	Safety improvement offsets emergency vehicle response time DHAE in Gilroy.	4
Gilroy	G-OMM#6: Noise Reduction Program	City of Gilroy	Need to provide upgrades to existing residential structures to improve noise attenuation	Community noise improvements offset noise DHAE in Gilroy.	1, 2, 4
Gilroy	G-OMM#7: South Valley Middle School Recreational Amenities	Gilroy Unified School District	Concern over loss of part of playing field/track	Recreational amenities partially offset for loss of part of school track/field.	2

Community	Proposed Measure	Original Source for Idea	Input Provided during Outreach	Reasonable Nexus to Residual DHAEs for Project Alternatives (including consideration of location)	Alternatives
Gilroy	G-OMM#8: Rebekah Children's Services (RCS) New Security Fence and Gate	Rebekah Children's Services	RCS identified that new fencing would help the facility's mission and would be connected to offsetting safety effects.	Increased security/safety will help to offset safety effects of Alternative 4.	4
Gilroy	G-OMM#9: San Ysidro Park Enhancements	City of Gilroy	City of Gilroy identified the need to enhance this park to serve the local low-income and minority neighborhoods.	Community park will partially offset visual aesthetics DHAE in Gilroy (Alternatives 1, 2).	1, 2
Gilroy	G-OMM#10: Forest Street Park Enhancements	City of Gilroy	City of Gilroy identified the need to enhance this park to serve the local low-income and minority neighborhoods.	Community park will partially offset visual aesthetics DHAE in Gilroy (Alternatives 1, 2).	1, 2
Volta	SJV-OMM#1: Volta Elementary School Improvements	Los Banos Unified School District	Need for school site improvements Need for additional community-serving amenities	School improvements offset noise DHAE and partially offset visual aesthetic DHAE in Volta area.	1, 2, 3 (noise, visual aesthetic DHAE), (noise only DHAE) 4
Volta	SJV-OMM#2: Volta Community Park at the Volta Elementary School	Los Banos Unified School District	Lack of neighborhood park Insufficient recreational opportunity on the elementary school site	Community park partially offsets visual aesthetic DHAE in San Joaquin Valley for Alternatives 1, 2, and 3 and helps to address adverse effect for Alternative 4.	1, 2, 3, 4

AACSA = African American Community Service Association; Authority = California High-Speed Rail Authority; Ave. = Avenue; Blvd. = Boulevard; CCS = Connecting Communities Strategy; DHAE = disproportionately high and adverse effect; EIR = environmental impact report; EIS = environmental impact statement; I- = Interstate; RCS = Rebekah Children's Services; re: = regarding; SCVTA = Santa Clara Valley Transportation Authority; SR = State Route.

5 OTHER COMMUNITY IMPROVEMENTS NOT PROPOSED AS OFFSETTING MITIGATION

The improvements that were evaluated but not proposed as offsetting mitigation are listed in Table 5-1. Table 5-1 also indicates the origins of the potential improvements and community input considered in the development of each potential improvement.

Table 5-1 Community Improvements Not Proposed as Offsetting Mitigation Measures

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Santa Clara/North San Jose **Per Section 5.4, residual DHAEs = noise (Alt. 1, 4) and aesthetics (Alt. 2, 3)**				
Newhall Street Bicycle/ Pedestrian Crossing	CCS/VTA Measure B; 2008 Santa Clara Countywide Bicycle Plan (County of Santa Clara 2008)	Safety for bicyclists and pedestrians Unintended project consequences resulting in connectivity issues within and between the City of Santa Clara and the surrounding area.	Safety, connectivity, community cohesion	No safety, connectivity or community cohesion DHAEs in this area. No nexus to residual noise DHAE in Santa Clara/North San Jose (Alt. 1, 4).
Sidewalk Gap Closure and Pothole Repair	City of Santa Clara	Need for continuous/enhanced sidewalks for pedestrian safety Need for improved roadway safety	Safety, connectivity, community cohesion	No safety, connectivity or community cohesion DHAEs in this area. No nexus to residual noise DHAE in Santa Clara/North San Jose (Alt. 1, 4).
Pedestrian Safety Improvements	City of Santa Clara	Safety concerns related to pedestrian crossings Unintended project consequences resulting in connectivity issues within and between the City of Santa Clara and the surrounding area.	Safety, livability, community cohesion	No safety, livability or community cohesion DHAEs in this area. No nexus to residual noise DHAE in Santa Clara/North San Jose (Alt. 1, 4).
San Jose Diridon				
Auzerais Railroad Crossing Warning Lights	African American Community Service Agency	Safety near railroad tracks Impacts on Black community	Safety	No safety DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, and 3) in San Jose Diridon area.
Auzerais Pedestrian/Bicycle Crossing	Authority staff developed based on community concern re: safety	Safety for bicyclist and pedestrians Need for pedestrian and bicycle network connectivity	Safety, community cohesion, connectivity	No safety, connectivity or community cohesion DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, and 3) in San Jose Diridon area.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Los Gatos Creek Trail Extension and Crossings	CCS/Santa Clara Community Working Group; Santa Clara County Parks Trails Master Plan (County of Santa Clara 1995)	Safety Impediments to San Jose trail system through overcrossings or other structures	Recreational opportunities, health, connectivity	No recreation, health or connectivity or DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, and 3) in San Jose Diridon area.
Los Gatos Creek Trail Lighting Improvements Under I-280	City of San Jose	Connectivity Safety Gaps in trails	Safety, connectivity, livability	No safety, connectivity or livability DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, and 3) in San Jose Diridon area.
Improved Pedestrian Route to Gardner Academy and Biebrach Park	Strong Neighborhood Initiative	Safety	Safety, connectivity, community cohesion	No safety, connectivity or community cohesion DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, and 3) in San Jose Diridon area.
Park/Trail under HSR Viaduct from Los Gatos Creek to Bird Avenue	Authority staff developed based on prior examples for viaducts elsewhere	Safety concerns Desire for connectivity	Recreational opportunities, health, community cohesion, connectivity	No recreational, health, connectivity or community cohesion DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, and 3) in San Jose Diridon area.
Cahill Park Improvements	City of San Jose Recreation and Parks	Piecemeal nature of park development Lack of cohesion of amenities Existing park fails to meet some community needs	Recreation, livability	No recreation or livability DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, and 3) in San Jose Diridon area.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Auzerais Grade Separation	City of San Jose	Grade separation would avoid project noise effects with Alt. 4 due to increased train horn noise at the at-grade crossing.	Noise, safety, traffic	No safety DHAEs in this area. Due to the extensive cost of grade separations, this improvement is not considered practicable (see further discussion of the practicability of grade separations in Volume 4, Responses to Comments on the Draft Environmental Impact Report/Environmental Impact Statement and Revised/Supplemental Draft Environmental Impact Report/Environmental Impact Statement, Chapter 17, Standard Responses).
Gardner/Willow Glen				
West Virginia Railroad Crossing Warning Lights	African American Community Service Agency	Safety near railroad tracks Impacts on Black community	Safety, community cohesion	No safety or community cohesion DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area.
West Virginia Ave Pedestrian/Bicycle Crossing	City of San Jose	Improve traffic, pedestrian, and bicycle safety throughout the neighborhood Establish key streets as pedestrian and bicycle corridors that link major destinations	Safety, livability, community cohesion, connectivity, health, recreation	No safety, livability, connectivity, community cohesion, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
Biebrach Park Connection to Fuller Park	City of San Jose	Quiet zones have led to pedestrian deaths Neglect Homelessness Need for streetscape improvements	Safety, community cohesion, connectivity, health, recreation	No safety, connectivity, community cohesion, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Guadalupe River Trail Pedestrian Crossing at Willow Street	City of San Jose Recreation and Parks; Guadalupe River Trail Reach 6 Master Plan (City of San Jose 2004)	Need for improved pedestrian and bicycle safety throughout the neighborhood Need for improved railroad crossings	Recreation, safety, connectivity, health	No safety, connectivity, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
Guadalupe River Trail Extension (Virginia to Curtner)	CCS/San Jose to Morgan Hill TWG; Santa Clara County Parks Trails Master Plan (County of Santa Clara 1995); Guadalupe River Trail Master Plan (City of San Jose Parks, Recreation, and Neighborhood Services 2017)	Connectivity Need for additional recreational opportunities	Health, livability, connectivity, community cohesion	No livability, connectivity, community cohesion, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
Jerome/Illinois to Bird Avenue Pedestrian Pathway	Authority staff based on community concerns about connectivity	Need for better walkability Isolation of Gardner neighborhood Safety	Safety, health, connectivity, community cohesion	No safety, connectivity, community cohesion, or health DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
West Virginia Streetscape and Pedestrian Crossings	Strong Neighborhood Initiative/Authority staff based on concept in Strong Neighborhood Initiative	Visual quality Safety	Safety, visual quality, livability, community cohesion	No safety, visual, livability, community cohesion, or health DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
Delmas Avenue Streetscape and Crossings	Strong Neighborhood Initiative/Authority staff based on concept in Strong Neighborhood Initiative	Visual quality Safety	Safety, visual quality, livability, community cohesion	No safety, visual, livability, connectivity, or community cohesion DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Bird Avenue North-South improvements	City of San Jose/Authority staff based on community concern about safety and connectivity	Need for streetscape improvements Safety Access Inclusion	Safety, connectivity, transportation	No safety, connectivity, or transportation DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
Three Creeks Trail Extension Crossing of SR 87/Caltrain/HSR	CCS/Santa Clara County Parks Trails Master Plan (County of Santa Clara 1995)/Authority	Safety Connectivity Need to close gaps in trail system	Recreation, safety, connectivity, health, livability	No safety, livability, connectivity, health or recreation DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
West Virginia Pocket Park South of West Virginia Railroad Crossing	Connecting Communities Strategy/Authority staff based on community interest in parks	Need for additional recreational opportunities	Health, recreation, livability	No livability, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
West Virginia Pocket Park at Prevost South of West Virginia Street	San Jose Community Working Group	Need for additional recreational opportunities	Health, recreation, livability	No livability, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Biebrach Park Improvements	Authority staff based on community interest in improved parks	Need for improved bicycle and pedestrian connections to Biebrach Park Need for improved pedestrian crossing at the intersection of Willis and Virginia Streets to facilitate connection with Gardner Academy. Desire for a gateway leading visitors to a receiving plaza and connecting to a cul-de-sac at the rear of the community center. Desire for an entrance plaza near the community center providing opportunities for outdoor community events and gatherings.	Recreation, health, livability	No livability, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
Community Art	Community Working Group (Danny Garza)	Interest in art as a form of neighborhood identification Promoting art and community involvement	Visual quality, community connection/identity	No visual, connectivity, community cohesion, or identity DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
Neighborhood Lighting	Community Working Group (Danny Garza)	Need for lighting improvements Safety	Visual quality, safety	No visual or safety DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area
National Night Out Contribution	Community Working Group (Danny Garza)	Need for expansion of community support activities and neighborhood policing	Safety, community cohesion	No safety or community cohesion DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) in Gardner/Willow Glen area

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
West Virginia Grade Separation	City of San Jose	Grade separation would avoid project noise effects with Alt. 4 due to increased train horn noise at the at-grade crossing.	Noise, safety, traffic	No safety or traffic DHAEs in this area. Due to the extensive cost of grade separations, this improvement is not considered practicable (see further discussion of the practicability of grade separations in Volume 4, Chapter 17, Standard Responses).
Washington/Guadalupe, Tamien, and Alma/Almaden				
Pedestrian and Bicycle Crossing Safety Improvements	Guadalupe Washington Safety Committee/Guadalupe Washington Neighborhood Association; Brent Bymaster (Tamien community leader)	Safety of children and other pedestrians walking to access schools, services, and commercial areas. Increased traffic through neighborhood from cars traveling to and from downtown San Jose and SR 87 may affect safety and accessibility for residents. Pedestrian dead zones	Safety, recreation, health, community cohesion	No safety, community cohesion, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
Rocketship Mateo Sheedy Elementary School Circulation and Safety Improvements	Rocketship Mateo Sheedy Elementary School staff	Idling cars during drop-off/pickup Traffic Safety	Safety	No safety DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
Washington Elementary School Pedestrian and Bicycle Safety Improvements	Washington Elementary School staff	Safety for children and other pedestrians Traffic Gang activity Impacts on bus routes	Safety, health, recreation, community cohesion, livability	No safety, livability, community cohesion, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Guadalupe River Trail Extension (Virginia to Curtner)	CCS/San Jose to Morgan Hill TWG, Santa Clara County Parks Trails Master Plan 2015 (County of Santa Clara Parks and Recreation Department 2015a, 2015b), Guadalupe River Trail Master Plan (City of San Jose Parks, Recreation, and Neighborhood Services 2017)/Authority staff based on prior planning interest	Connectivity Need for additional recreational opportunities	Health, livability, connectivity, community cohesion	No livability, connectivity, community cohesion, or health DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
Guadalupe River Trail Pedestrian Crossing at Willow Street	City of San Jose Recreation and Parks/Guadalupe River Trail Reach 6 Master Plan (City of San Jose 2004)	Need for improved pedestrian and bicycle safety throughout the neighborhood Need for improved railroad crossings	Recreation, safety, connectivity, health	No safety, connectivity, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
Three Creeks Trail Extension Crossing of SR 87/Caltrain/HSR	CCS/Santa Clara County Parks Trails Master Plan (County of Santa Clara 1995)	Safety Connectivity Need to close gaps in trail system	Recreation, safety, connectivity, health, livability	No safety, livability, connectivity, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Bellevue Park Improvements.	Strong Neighborhood Initiative	Abandoned railway property next to Bellevue Park with no trail San Jose Parks had budgeted in the past to purchase the vacant lot but negotiations with UPRR were not successful	Recreation, health, livability	No livability, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
Oak/Almaden Pocket Park	Guadalupe Washington Neighborhood Association	Loss of park space Lack of Little League field	Recreation, livability	No livability or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
Traffic Calming	Community site walk	Pedestrian safety Traffic	Safety, connectivity, livability	No safety, connectivity, or livability DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
Washington School Recreation Improvements	Strong Neighborhood Initiative	Lack of recreational opportunities for youth Improvements needed to existing facilities	Recreation, health, livability	No livability, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
Rocketship Mateo Sheedy Elementary School Play Fields/Landscaping [NOTE: Separate improvement for Public Address system upgrade is included in potential list]	Rocketship Mateo Sheedy Elementary School	Students currently play on a dirt field; playground upgrades; instead of grass which requires maintenance and associated costs, the school would like green AstroTurf. More trees are needed	Safety, recreation, livability	No livability, safety, or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Alma Community Center and Teen Center Improvements	Strong Neighborhood Initiative/City of San Jose Recreation and Parks	Alma Community Center serves mostly disadvantaged community residents in the area City of San Jose is currently in the process of purchasing an adjacent property, and the owner has indicated that the property can be transferred to City for use as public park	Recreation, education	No education or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
Healing Grove Health Center Sports/Outdoor Activity/Arts Programs	Brent Bymaster - Tamien Community leader	Gang activity in "The Triangle" Homelessness Impacts on schools, students, and neighborhoods	Recreation, health, livability	No livability, health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4) or visual DHAE (Alt. 1, 2, 3) in Washington, Guadalupe, Tamien, Alma, Almaden.
South San Jose				
Monterey Road Grand Boulevard (other than landscaping)	CCS/San Jose General Plan (City of San Jose 2020a); Authority staff based on prior City planning	Transportation improvements needed Connectivity Visual Quality	Transportation, recreation, connectivity, community cohesion	No recreation, connectivity, or community cohesion, transportation DHAEs in area. Potential improvements include landscaping element of Monterey Road Grand Boulevard, but remainder of Grand Blvd. would not have any nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), or visual aesthetics DHAE (Alt. 1, 2, 3) in South San Jose.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Capitol and Blossom Hill Caltrain Stations Access Improvements	City of San Jose/Authority based on community interest in better access to transit	Traffic Community cohesion Safety and security	Transportation, safety, connectivity	No transportation or connectivity DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), or visual aesthetics DHAE (Alt. 1, 2, 3) in South San Jose. Although improvement would provide safety improvements through extended pedestrian overcrossings at the two stations, the two stations are located outside of any area of emergency vehicle response time adverse effects (Alt. 4).
Coyote Creek Trail-Fisher Creek Trail Connection	City of San Jose Recreation and Parks	Need to preserve trail connection through widening Recreation Gaps in trail system	Recreation, health	No health or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), or visual aesthetics DHAE (Alt. 1, 2, 3) in South San Jose.
Cottonwood and Parkway Lakes Fish Screens and Supporting Improvements	Coyote Creek Parkway County Park Integrated Natural Resources Management Plan and Master Plan (County of Santa Clara Parks and Recreation Department 2007)/Santa Clara County Parks and Recreation	Need to prevent native fish from entering the nonnative stocked waterbodies, and nonnative fish from entering Coyote Creek Gaps in park system	Recreation, livability, education	No livability, education or recreational DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), or visual aesthetics DHAE (Alt. 1, 2, 3) in South San Jose.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Grade Separation of Skyway, Branham, and Chynoweth	City of San Jose	Grade separations would avoid project noise, traffic, and emergency vehicle response delay effects with Alt. 4 related to these at-grade crossings.	Noise, safety, traffic	No traffic DHAEs in this area. Due to the extensive cost of grade separations, this improvement is not considered practicable (see further discussion of the practicability of grade separations in Volume 4, Chapter 17, Standard Responses).
Morgan Hill				
Monterey Corridor Express Bus Route and Stops	VTA, City of Morgan Hill	Connectivity	Transportation	No transportation DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3), residential displacement DHAE (Alt. 2) in Morgan Hill.
Senior Shuttles	VTA, City of Morgan Hill	Connectivity	Transportation, livability	No transportation or livability DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.
Bus Transit Stop Amenities	VTA	Connectivity	Transportation, livability	No transportation or livability DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Downtown Pedestrian/Bicycle Railroad Overcrossings	Authority based on community concern re: safety, connectivity	Safety Connectivity	Safety, connectivity, community cohesion	No safety, connectivity, or community cohesion DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.
Monterey Road Pedestrian and Bicycle Intersection Improvements	CCS/City of Morgan Hill Bikeways, Trails, Parks and Recreation Master Plan (City of Morgan Hill 2020a)	Safety Connectivity for bicycles and pedestrians	Safety, recreational, connectivity	No safety, connectivity, or recreational DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.
Butterfield Road Pedestrian and Bicycle Intersection Improvements	CCS/City of Morgan Hill Bikeways, Trails, Parks and Recreation Master Plan (City of Morgan Hill 2020a)	Safety Connectivity for bicycles and pedestrians	Safety, connectivity, community cohesion	No safety, connectivity, or community cohesion DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.
Tennant Sidewalk Improvement	City of Morgan Hill	Safety Connectivity	Safety, connectivity, community cohesion	No safety, connectivity, or community cohesion DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.
Bike Lane Upgrades	CCS/City of Morgan Hill Bikeways, Trails, Parks and Recreation Master Plan (City of Morgan Hill 2020a)	Need for recreational opportunities Need for transportation options Safety	Recreation, transportation, safety, livability	No transportation, safety, livability, or recreation DHAEs in environmental justice communities in this area. No nexus to residual noise (Alt. 4), emergency vehicle response time (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3).

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Llagas Creek Trail (Santa Theresa Boulevard to East San Martin Avenue)	CCS/Santa Clara County Parks Trails Master Plan 2015 (County of Santa Clara Parks and Recreation Department 2015a, 2015b)	Need for recreational opportunities Need for transportation options Safety	Transportation, safety, recreation, health, connectivity	No transportation, safety, health, connectivity or recreation DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.
Coyote Creek Low-Flow Crossings Replaced with Bridges	Coyote Creek Parkway County Park Integrated Natural Resources Management Plan and Master Plan (County of Santa Clara Parks and Recreation Department 2007)/Santa Clara County Parks and Recreation	Creek crossing limited to period of low flow in some locations Safety	Safety, recreation	No safety or recreation DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.
Perry's Hill Staging Area, Coyote Creek Parkway County Park	Coyote Creek Parkway County Park Integrated Natural Resources Management Plan and Master Plan (County of Santa Clara Parks and Recreation Department 2007)/Santa Clara County Parks and Recreation	Need for expanded recreational opportunities Gaps in park system	Health, recreational, livability	No health, livability or recreation DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
New High School Site Acquisition	Morgan Hill Unified School District	Need for additional school space	Education	No education DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill.
Recycled Water Pipe Installation along Tennant Avenue	City of Morgan Hill	Improvement would support water conservation.	Water conservation.	No water supply DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill. Possible collaboration during construction but commitment to install not required.
Install Telecommunications Conduits to Help with Internet Access	City of Morgan Hill	Improvement would help to bridge the “digital divide”.	Connectivity, access to information, education	No access to information, education or connectivity DHAEs in environmental justice communities in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3) in Morgan Hill. Possible collaboration during construction but commitment to install not required.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Grade Separation of Tilton, East Dunne, and Tennant	City of Morgan Hill	Grade separations would avoid project noise, traffic, and emergency vehicle response effects with Alt. 4.	Noise, safety, traffic	No traffic or safety DHAEs in environmental justice communities in this area. Due to the extensive cost of grade separations, this improvement is not considered practicable (see further discussion of the practicability of grade separations in Volume 4, Chapter 17, Standard Responses). In addition, Alternative 4 would not have DHAEs related to traffic or emergency vehicle response delays in low-income areas in Morgan Hill (there are emergency vehicle response delays in non-low-income areas in the southern part of Morgan Hill along Middle Ave.).
Gilroy				
VTA Express Bus Service Gilroy to Diridon	VTA	Need for improved connectivity	Transportation, connectivity	No transportation or connectivity DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Student Transit Pass Program Initial Funding	City of Gilroy	Need for transportation support	Transportation, education	No transportation or education DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy.
Bicycle/Pedestrian Overcrossings (Leavesley Road, 10th Street)	Authority staff based on prior community concern re: crossing safety and connectivity	Safety Connectivity	Safety, connectivity, community cohesion	No connectivity or community cohesion DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy. Leavesley is outside area of emergency vehicle response DHAE. Tenth Street is in area of emergency vehicle response DHAE, but area east of Monterey and the railroad tracks is commercial in character and not a heavily used pedestrian or bicycle area compared to IOOF at-grade crossing, which serves two schools, Rebekah Children's Service, and minority neighborhoods and low-income neighborhoods.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Gavilan College: Bicycle Connection and Wayfinding from Downtown	Gavilan College	Need for enhanced transportation options for students	Safety, connectivity, health, community cohesion	No connectivity, health, or community cohesion DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4) because this improvement is primarily outside the area of concern for emergency vehicle response time delays, visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy.
Bikeshare Program	Authority staff based on use of such programs elsewhere for connectivity	Need to encourage nonvehicular travel modes	Access, connectivity, health	No access, connectivity or health DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy.
Lions Creek Trail Extension	CCS/Envision Silicon Valley – Resolution 2016-06-17	Enhanced recreational opportunities	Recreation, health	No health or recreation DHAEs in the area of this improvement. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
West Branch Llagas Creek Trail	CCS/Santa Clara County Parks Trails Master Plan 2015 (County of Santa Clara Parks and Recreation Department 2015a, 2015b)	Fill gaps in trail system Provide enhanced recreational amenities Improve options for active transportation	Recreation, health	No health or recreation DHAEs in the area of this improvement. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy.
Marcella Avenue Trail	CCS/Santa Clara County Parks Trails Master Plan 2015 (County of Santa Clara Parks and Recreation Department 2015a, 2015b)	Fill gaps in trail system Provide enhanced recreational amenities Improve options for active transportation	Recreation, health	No health or recreation DHAEs in the area of this improvement. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy.
Juan Bautista de Anza Trail	CCS/Santa Clara County Parks Trails Master Plan 2015 (County of Santa Clara Parks and Recreation Department 2015a, 2015b)	Fill gaps in trail system Provide enhanced recreational amenities Improve options for active transportation	Recreation, health	No health or recreation DHAEs in the area of this improvement. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Rebekah Children's Services Improvements (Other Than Perimeter Fencing)	Rebekah Children's Services	Various needs identified and incorporated into improvement	Health, recreation, visual quality, livability	No health, recreation, or livability DHAEs in this area. Visual aesthetic effects of Alt. 1 and 2 better addressed through improvement of two downtown public parks. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy.
Lead Service Line Replacement Project	City of Gilroy	Need to replace water lines in the City to enhance health and safety of the community by ensuring the water distribution system provides a reliable and adequate supply of safe drinking water	Health, safety	No health DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), South Valley Middle School recreational field DHAE (Alt. 2), or residential displacement DHAE (Alt. 2) in Gilroy. While alternative 4 would have DHE related to emergency vehicle response delays (safety), unlike the offsetting mitigation measures proposed in Gilroy to enhance safety, this improvement would not reduce transportation accidents like the other improvements which have much closer nexus to the project effects.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Gavilan College Low-Income Student Housing	Gavilan College	Need for affordable housing for students	Livability, economic, education	No livability, economic or education DHAEs in this area. No nexus to residual noise DHAE (Alt. 4), emergency vehicle response time DHAE (Alt. 4), visual aesthetic DHAE (Alt. 1, 2, 3), or South Valley Middle School recreational field DHAE (Alt. 2). Although there is a nexus to the residential displacement DHAE (Alt. 2) in Gilroy, the separate improvement to provide affordable housing funding support in general, as opposed to only focusing on student housing, is considered more appropriate given that Alt. 2 would have more community residential displacement.
San Joaquin Valley				
Los Banos to Gilroy and Merced HSR Station Shuttles	Authority based on prior public concerns about connectivity to HSR stations	Improved regional transit connectivity Additional commuting options for students Traffic impacts on local roads	Transportation, connectivity	No transportation or connectivity DHAEs in this area. No nexus to residual noise (all alts.), visual aesthetics DHAE (Alt. 1, 2, 3) in San Joaquin Valley.
Pedestrian/Bicycle Improvements at Volta	Authority based on observation of lack of pedestrian/bike improvements	Lack of pedestrian safety	Health, connectivity, safety, community cohesion	No health, connectivity, safety, or community cohesion DHAEs in this area. No nexus to residual noise (all alts.), visual aesthetics DHAE (Alt. 1, 2, 3) in San Joaquin Valley.

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Cross-Community				
Job Training (All Santa Clara County)	Center for Employment Training, Mission College, African American Community Service Agency, Vietnamese Voluntary Foundation, Gavilan College	Shifting job and career opportunities and need for access to new training or retraining. Jobs for minority communities Impact on availability and cost of housing for community members, particularly for low-income individuals, workers in entry-level and service-oriented jobs, and young families who might get squeezed out with an influx of higher-income workers relocating to housing in this area due to high-speed transit availability.	Economic, educational, livability	No education, economic, or livability DHAEs in this project section. The project would result in increases in employment during construction and operations, which would more than offset the loss of jobs due to business displacements, and thus there is no DHAE related to employment. However, the Authority may coordinate with the Center for Employment Training and other job training organizations moving forward to construction and operations to coordinate on potential employment opportunities with the project. No nexus to residual noise (Alt. 4), emergency vehicle response time (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3), South Valley Middle School field DHAE (Alt. 2), or residential displacement DHAE in Morgan Hill and Gilroy (Alt. 2).

Potential Improvement	Original Source for Idea	Input Provided during Outreach	Intended Benefit to Minority Communities and Low-Income Communities	Reason for Not Being Considered
Homeless Services (Cities of Santa Clara and San Jose)	Santa Clara County Office of Supportive Housing, HomeFirst, PATH, Senator Jim Beall, African American Community Service Agency, Family and Children's Services of Silicon Valley, City of San Jose Department of Transportation, San Jose Councilmember Perales, Sacred Heart Nativity School	Displacement of homeless individuals and families Homeless youth Safety for people living along the tracks Homeless encampments along highways Need for services (especially mobile) for homeless population Increase in homeless populations Safe spaces for homeless	Economic, health, livability	No nexus to residual noise (Alt. 4), emergency vehicle response time (Alt. 4), visual aesthetics DHAE (Alt. 1, 2, 3), South Valley Middle School field DHAE (Alt. 2), or residential displacement DHAE in Morgan Hill and Gilroy (Alt. 2). The Authority will coordinate with the host railroad, landowners, and community service providers if displacement of homeless encampments or individuals is required during construction or operations.
Negotiate with Caltrain to Not Sound Horns at the Diridon, Tamien, Capitol, and Hill Caltrain Stations	City of San Jose	Avoiding sounding of horns would reduce project noise effects.	Reduction of noise effects.	Sounding of horns at Caltrain Stations is not under control of the Authority, but under the control of Caltrain as the host railroad who determines safety requirements for its stations in its corridor and under the control of UPRR as the host railroad who determined safety requirement for the stations in its corridor.

Alt. = alternative; Authority = California High-Speed Rail Authority; Ave = Avenue; Blvd. = Boulevard; CCS = Connecting Communities Strategy; DHAE = disproportionately high and adverse effect; HSR = high-speed rail; I- = Interstate; re: = regarding; SR = State Route; TWG = technical working group; UPRR = Union Pacific Railroad; VTA = Valley Transportation Authority.

APPENDIX 5-C, ATTACHMENT A: PROFILES OF PROPOSED OFFSETTING MITIGATION MEASURES

1. OFFSETTING MITIGATION MEASURE SC/NSJ-OMM#1: NOISE TREATMENTS FOR RESIDENTIAL BUILDINGS ALONG CALTRAIN CORRIDOR TO ADDRESS EXISTING NOISE

COMMUNITY: SANTA CLARA/NORTH SAN JOSE

ALTERNATIVE: 4

Measure Description

The proposed offsetting mitigation measure will provide funding for installation of building insulation and window treatments for up to three (3) building façades affected by existing freeway noise between Santa Clara Station and Interstate (I-) 880.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionately high and adverse effects (DHAE) on low-income populations related to project-generated operational noise. There would be residual severe noise impacts within the Santa Clara/North San Jose community after the application of project noise barrier mitigation and consideration of project benefits. Alternative 4 would have severe noise impacts at one location (a suite hotel) in Santa Clara south of the Santa Clara Caltrain Station. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations. While the proposed improvement will not directly address operational noise effects resulting from the project, it will provide a related offset representing an investment in community noise reduction and will reduce noise levels in the same community affected by project noise.

Benefit to Minority Populations and/or Low-income Populations

The proposed offsetting mitigation measure will benefit low-income populations in the Santa Clara/North San Jose community by providing sound-reducing improvements at apartment buildings affected by highway noise between Santa Clara Station and I-880/State Route (SR) 82. This will provide improved livability and health for residents.

Consistency with Community Goals and Planning

The proposed offsetting mitigation measure will help achieve compliance with the indoor noise standards enforced through City of Santa Clara and City of San Jose General Plan policies.

Community Outreach Input and Relationship to DHAEs

Community concerns, as expressed by stakeholders from Next Door Solutions and from various local elementary schools, that are addressed include the following:

- Existing train noise
- Noise disrupting an already challenging living environment

This improvement will provide noise abatement benefitting residents exposed to existing noise along the Caltrain Corridor between Santa Clara Station and I-880/SR 82 by providing improved livability and health (Figure SC/NSJ-1). Because the high-speed rail (HSR) alignment is along the Caltrain corridor in this community, these same residents would experience residual DHAE noise effects under Alternative 4 after the application of project mitigation and consideration of project benefits.

Improvement Cost Estimate

Building insulation and window treatments for the first row of residential buildings, approximately three building façades between Santa Clara Station and I-880/SR 82, is estimated at $75,000. Providing building and/or window insulation is estimated at $25,000 per building.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to property owners to fund and implement this improvement and will fund the entire measure. A program implementer will need to be identified/developed to work with homeowners and building owners. The Authority will coordinate with City of Santa Clara regarding making homeowners aware of the program. The City would process any required encroachment and building permits needed for building upgrades.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	These communities are already affected by transportation noise, and this measure will provide direct benefit to these low-income populations in the community.
Relative Number of Beneficiaries	9	This measure will directly benefit low-income populations along the Caltrain corridor but not the community at large.
Practicable	15	Funding for this improvement is mostly practicable, need mechanism for implementing. Relatively low-cost request.
Defined Project or Action	15	The Authority will provide funding; need to identify implementer.
Satisfy Authority Obligations	15	Addresses noise from transportation infrastructure.
Defined Roles and Responsibilities	5	Authority will fund treatments Program implementer needs to be identified.
Evidence of Agreement	0	City of Santa Clara did not indicate support or opposition to this measure since it will be implemented by the Authority directly.
Cost-Effectiveness	15	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	86	

Authority = California High-Speed Rail Authority.

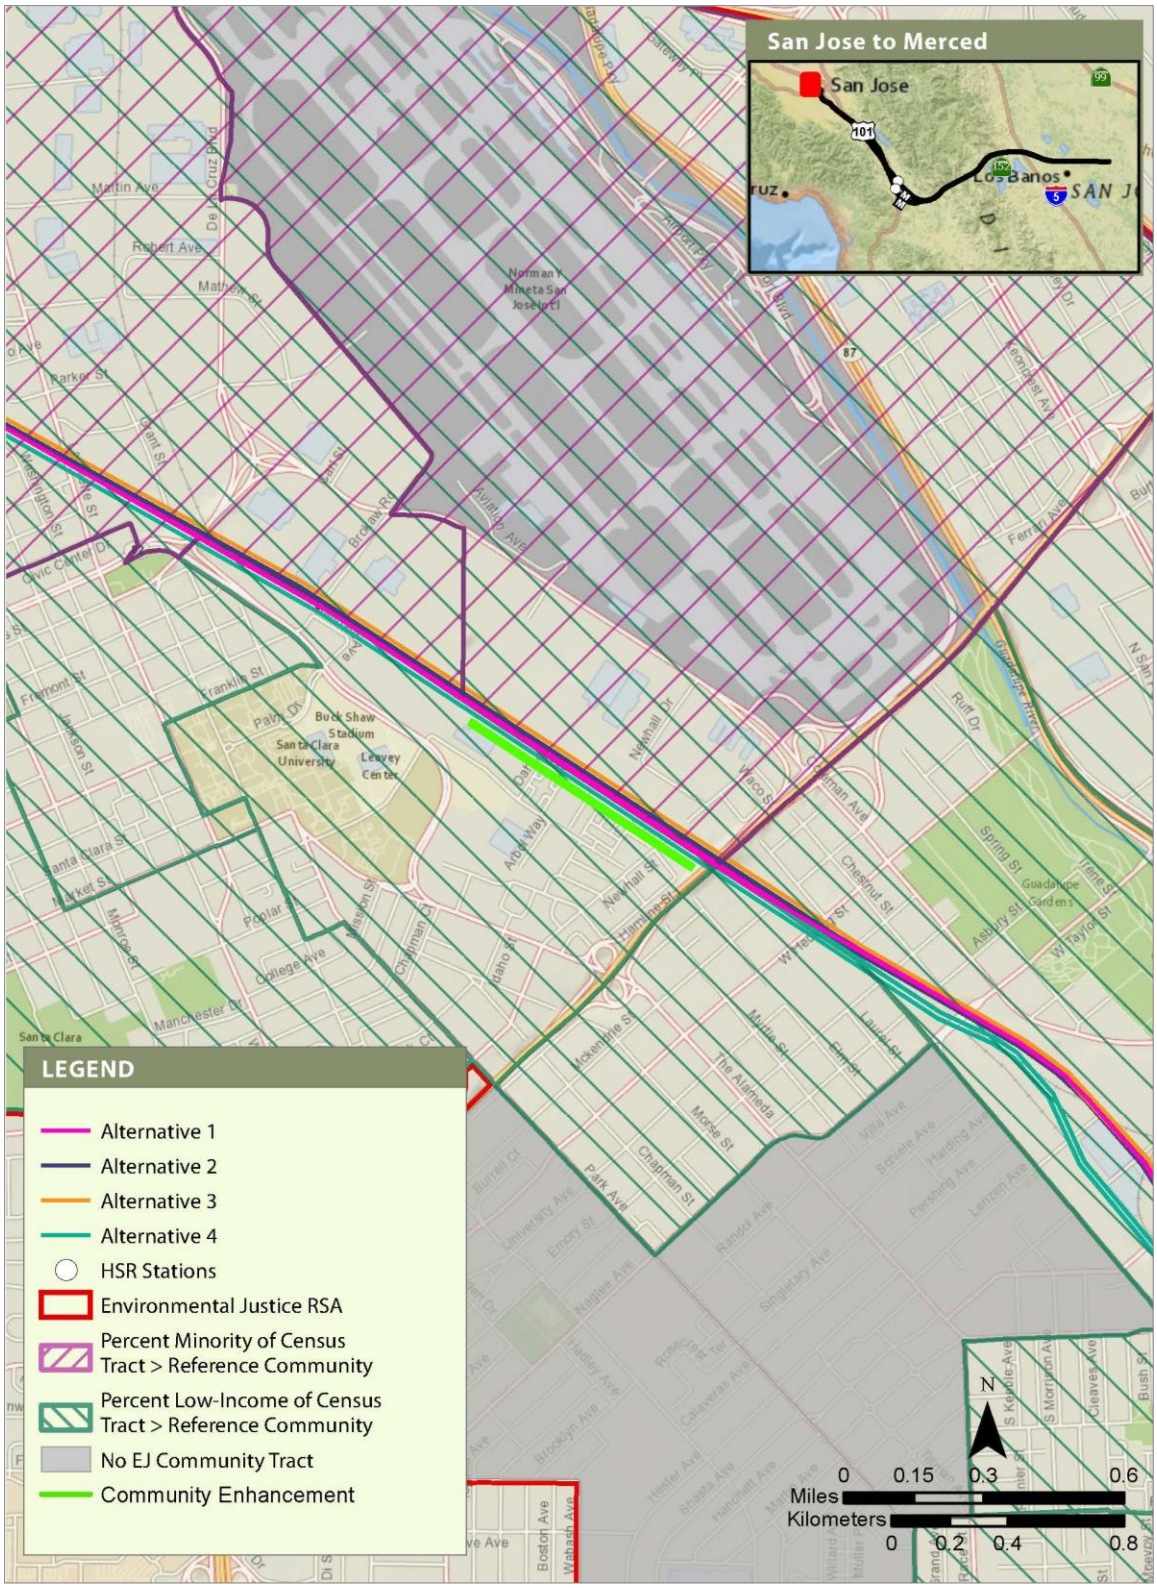

Figure SC/NSJ-1 Noise Treatments for Residential Buildings Along Caltrain Corridor to Address Existing Noise Santa Clara/North San Jose

2. OFFSETTING MITIGATION MEASURE SC/NSJ-OMM#2: EL CAMINO REAL AND BENTON STREET SAFETY IMPROVEMENTS

COMMUNITY: SANTA CLARA/NORTH SAN JOSE

ALTERNATIVES: 1, 2, 3, 4

Measure Description

The proposed improvement will provide safety improvements at the intersection of El Camino Real and Benton Street. The City of Santa Clara has identified a suite of improvements, including decorative crosswalk, curb extensions, pedestrian crosswalk motion sensor, and signal improvements (leading pedestrian interval, countdown timers, accessible pedestrian signal). The California High-Speed Rail Authority (Authority) will either contribute a portion of funding for the full suite of improvements or will fund certain discrete improvements up to the identified funding commitment level.

Nexus to Disproportionately High and Adverse Effects

The project would not result in disproportionately high and adverse effects (DHAE) on minority populations or low-income populations in Santa Clara/North San Jose related to operational railroad safety, transit access, community connectivity, or community cohesion.

Thus, this improvement is not being proposed due to a direct connection to a DHAE in Santa Clara. Instead, based on the City's identification that the Authority funding of improvements, such as this one, will help to offset the project's general effects on the community, the Authority has identified this as a general improvement.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment under all project alternatives would traverse the Santa Clara/North San Jose community, where the percentage of minority residents and low-income residents is greater than that within the reference community.

The proposed improvement will benefit minority residents and low-income residents in the Santa Clara/North San Jose community by providing increased multimodal safety and connectivity within the community and to the Santa Clara Caltrain Station. Improved safety will also improve overall livability within the community. The location of the improvement relative to the location of the HSR alignment within the Santa Clara/North San Jose community is shown in Figure SC/NSJ-2.

Consistency with Community Goals and Planning

The proposed improvement will promote the following goals of the *City of Santa Clara Bicycle Master Plan Update 2018* (Bicycle Master Plan) and the 2019 *City of Santa Clara Pedestrian Master Plan* (Pedestrian Master Plan):

- Safe: Design pedestrian environments that are accessible and reduce the risk of pedestrian-involved collisions.
- Comfortable: Identify pedestrian improvements that create an easy-to-navigate and comfortable pedestrian environment.

- Convenient: Coordinate future land use efforts that will provide more mobility options for people in Santa Clara to include walking for their utilitarian trips.
- Active: Develop lively and unique pedestrian spaces that sustain healthy communities and generate economic activity.
- Implementable: Identify, develop, and maintain a complete and convenient pedestrian network.

Community Outreach Input and Relationship to DHAEs

Concerns expressed during community outreach that are addressed include the following:

- Safety for bicyclists and pedestrians
- Connectivity between areas isolated by transportation facilities

This improvement is highlighted in both the Bicycle Master Plan and Pedestrian Master Plan as an intersection location that should be improved to enhance the user experience as a bicyclist and/or pedestrian. In the Bicycle Master Plan, this intersection is listed as a priority "Spot Improvement" location that would benefit from enhanced bicycle signal detection and tighter turning radii. The Pedestrian Master Plan lists this intersection as a high-priority location within the Downtown/University Area of Santa Clara that should be reviewed to provide pedestrian improvements, such as traffic signal improvements and curb extensions. Overall, these improvements will provide for enhanced safety and connectivity for residents east of El Camino Real at Benton Street to safely access Caltrain, future Bay Area Rapid Transit to Santa Clara, services, commerce, schools, and other facilities west of El Camino Real. Because the HSR alignment is along the Caltrain Corridor in this community, these same residents would experience various project effects under all project alternatives. Therefore, this improvement will apply under all project alternatives.

However, as noted above, the project does not result in safety, connectivity, or transit access effects due to operations, so this improvement is a general improvement and not related narrowly to a specific DHAE.

Improvement Cost Estimate

The cost of pedestrian safety improvements (rectangular flashing beacons, high-visibility crosswalk markings, and overhead crosswalk lighting) is estimated to be $2,000,000 in 2020 dollars, based on comparable projects. The Authority will fund $500,000 out of the total cost. If the City advances the entire project, the Authority's funding could be used to defray part of the total cost. If the City does not have funding for the entire project, then a smaller project could be pursued with the $500,000 provided by the Authority. In concept, that smaller project could include a decorative crosswalk and either one or more curb improvements or some of the signal improvements.

Roles and Responsibilities

The Authority will provide funding to the City of Santa Clara to implement these improvements.

Assessment Based on Selection Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	10	Safety improvement for surrounding minority population and low-income population.
Relative Number of Beneficiaries	12	Major roadway likely used by more than just the immediately surrounding minority population and low-income population.
Practicable	15	Technically feasible; relatively low-cost request.
Defined Project or Action	15	Project is defined.
Satisfy Authority Obligations	15	Provides safety and connectivity improvement.
Defined Roles and Responsibilities	15	Authority to provide funding to the City of Santa Clara.
Evidence of Agreement	15	City of Santa Clara in support.
Cost-Effectiveness	12	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	109	

Authority = California High-Speed Rail Authority.

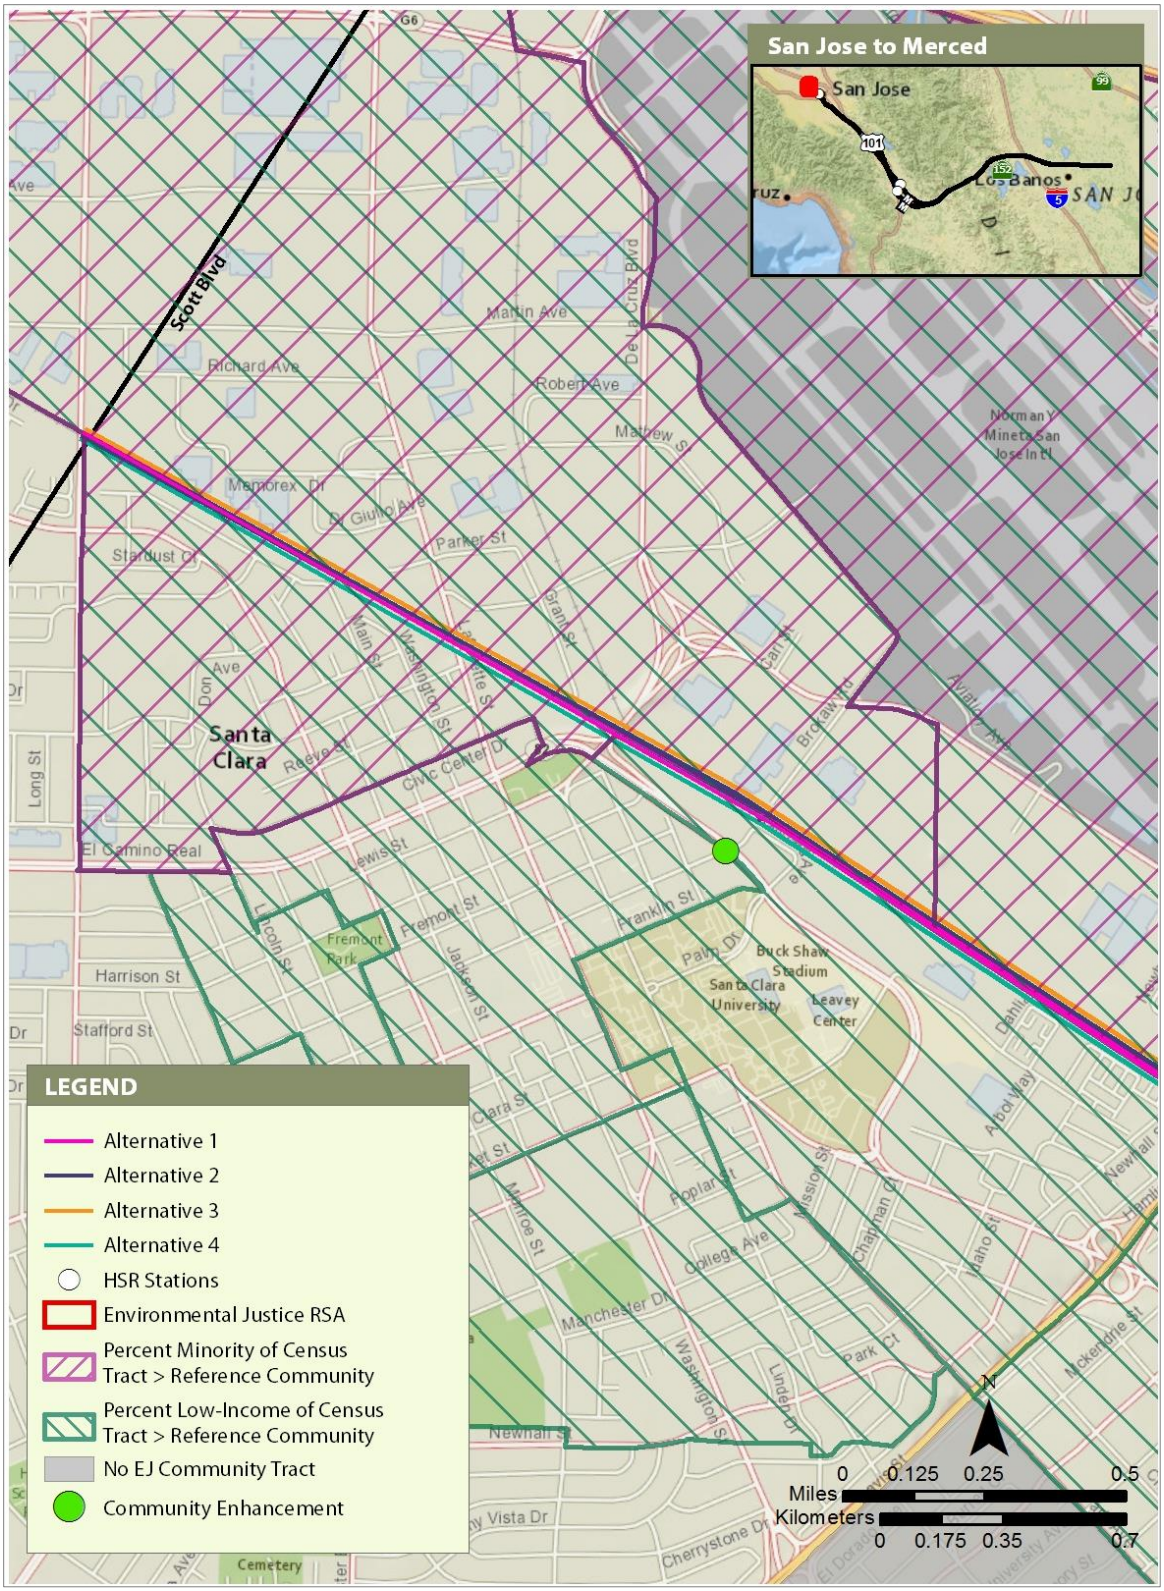

Figure SC/NSJ-2 El Camino Real and Benton Street Safety Improvements Santa Clara/North San Jose

3. OFFSETTING MITIGATION MEASURE SC/NSJ-OMM#3: STREETSCAPE IMPROVEMENTS

COMMUNITY: SANTA CLARA/NORTH SAN JOSE

ALTERNATIVES: 2, 3

Measure Description

The proposed improvement will provide streetscape improvements to promote safe, convenient, and attractive pedestrian routes. Facilities could include sidewalk improvements, bus stop amenities (e.g., shade structures, benches), landscaping (e.g., trees, planters), street crossing improvements, or American with Disabilities Act (ADA)–compliant curb ramps that increase the desirability of walking. Improvements generally will occur within one block of the high-speed rail (HSR) alignment within or adjacent to residential areas and are based on the City of Santa Clara Pedestrian Master Plan (Pedestrian Master Plan) (2019).

Nexus to Disproportionately High and Adverse Effects

Under Alternatives 2 and 3, the project would result in disproportionately high and adverse effects (DHAEs) on low-income populations related to visual quality associated with elevated viaducts and embankment. There would be residual visual impacts within the Santa Clara/North San Jose community after the application of project mitigation and consideration of project benefits due to the aerial viaduct. DHAEs would be related to permanent visual effects associated with the visibility of the proposed aerial viaduct through this community. While the proposed improvement will not directly address operational visual effects resulting from the project, it will provide improvements that will help to offset visual DHAEs in this community by providing funding for streetscape improvements.

Benefit to Minority Populations and Low-Income Populations

The HSR alignment under all project alternatives would traverse the Santa Clara community, where the percentage of minority residents and low-income residents is greater than that within the reference community.

The proposed streetscape improvements will benefit minority residents and low-income residents in the Santa Clara/North San Jose community by promoting a safer and more aesthetically pleasing pedestrian environment, thus improving overall livability and community cohesion. The location of the improvement relative to the location of the HSR alignment within the Santa Clara/North San Jose community is shown in Figure SC/NSJ-3.

Consistency with Community Goals and Planning

The proposed improvement will promote the follow goals of the Pedestrian Master Plan (2019):

- Safe: Design pedestrian environments that are accessible and reduce the risk of pedestrian-involved collisions.

- Comfortable: Identify pedestrian improvements that create an easy-to-navigate and comfortable pedestrian environment.
- Convenient: Coordinate future land use efforts that will provide more mobility options for people in Santa Clara/North San Jose to include walking for their utilitarian trips.
- Active: Develop lively and unique pedestrian spaces that sustain healthy communities and generate economic activity.
- Implementable: Identify, develop, and maintain a complete and convenient pedestrian network.

The Pedestrian Master Plan particularly notes the need for ADA-compliant curb ramps, as these features are missing in 31 percent of rights-of-way where they could be installed.

Community Outreach Input and Relationship to DHAEs

Community concerns, as identified in the Pedestrian Master Plan, that are addressed include the following:

- Safety concerns related to pedestrian injuries and deaths
- Need for improved aesthetics and visual quality
- Need for access/inclusion for disabled individuals

This improvement will provide for enhanced safety, accessibility, community cohesion, and overall livability for residents within one block of the HSR alignment within or adjacent to residential areas. Because the HSR alignment with Alternatives 2 and 3 would be on an elevated viaduct along the Caltrain Corridor in this community, these same residents would experience various DHAEs related to visual aesthetics. Therefore, this improvement will apply only to Alternatives 2 and 3.

Cost Estimate

Streetscape improvements to include shade trees, landscaping, pedestrian lighting, and other minor amenities for the length (1 mile) of City of Santa Clara adjacent residential street face abutting the railroad right-of-way along portions of Main Street and Washington Street is estimated at $500,000.[1] These funds could be used first on these identified streets then to further out streets as funds remain.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will fund projects identified in the Pedestrian Master Plan. The Authority will work with the City to identify priority projects within proximity of the project alignment that would promote maximum safety and connectivity for pedestrians. The City's Pedestrian Master Plan prioritized projects based on six criteria (safety, pedestrian comfort, destination accessibility, public-identified need, consistency with other plans, and cost). This resulted in the identification of 79 high-priority projects broken down into three categories: Spot Improvements, Curb Ramps, and Sidewalks. A complete list of projects and location details are included in Chapter 6 and Appendix A of the Pedestrian Master Plan.

Assessment Based on Selection Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

[1] Per length cost at $500,000 per mile for residential streets.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	10	Requested by stakeholders as critical benefit and would be used by surrounding minority population and low-income population in close proximity to railroad tracks.
Relative Number of Beneficiaries	6	Entire neighborhood for improvement benefit is minority and low-income.
Practicable	15	Technically feasible and standard design.
Defined Project or Action	10	Some design and specific locations needed.
Satisfy Authority Obligations	15	Safety, connectivity in close connection with railroad tracks.
Defined Roles and Responsibilities	15	Authority to fund and City of Santa Clara to implement.
Evidence of Agreement	15	City has agreed.
Cost-Effectiveness	15	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	101	

Authority = California High-Speed Rail Authority.

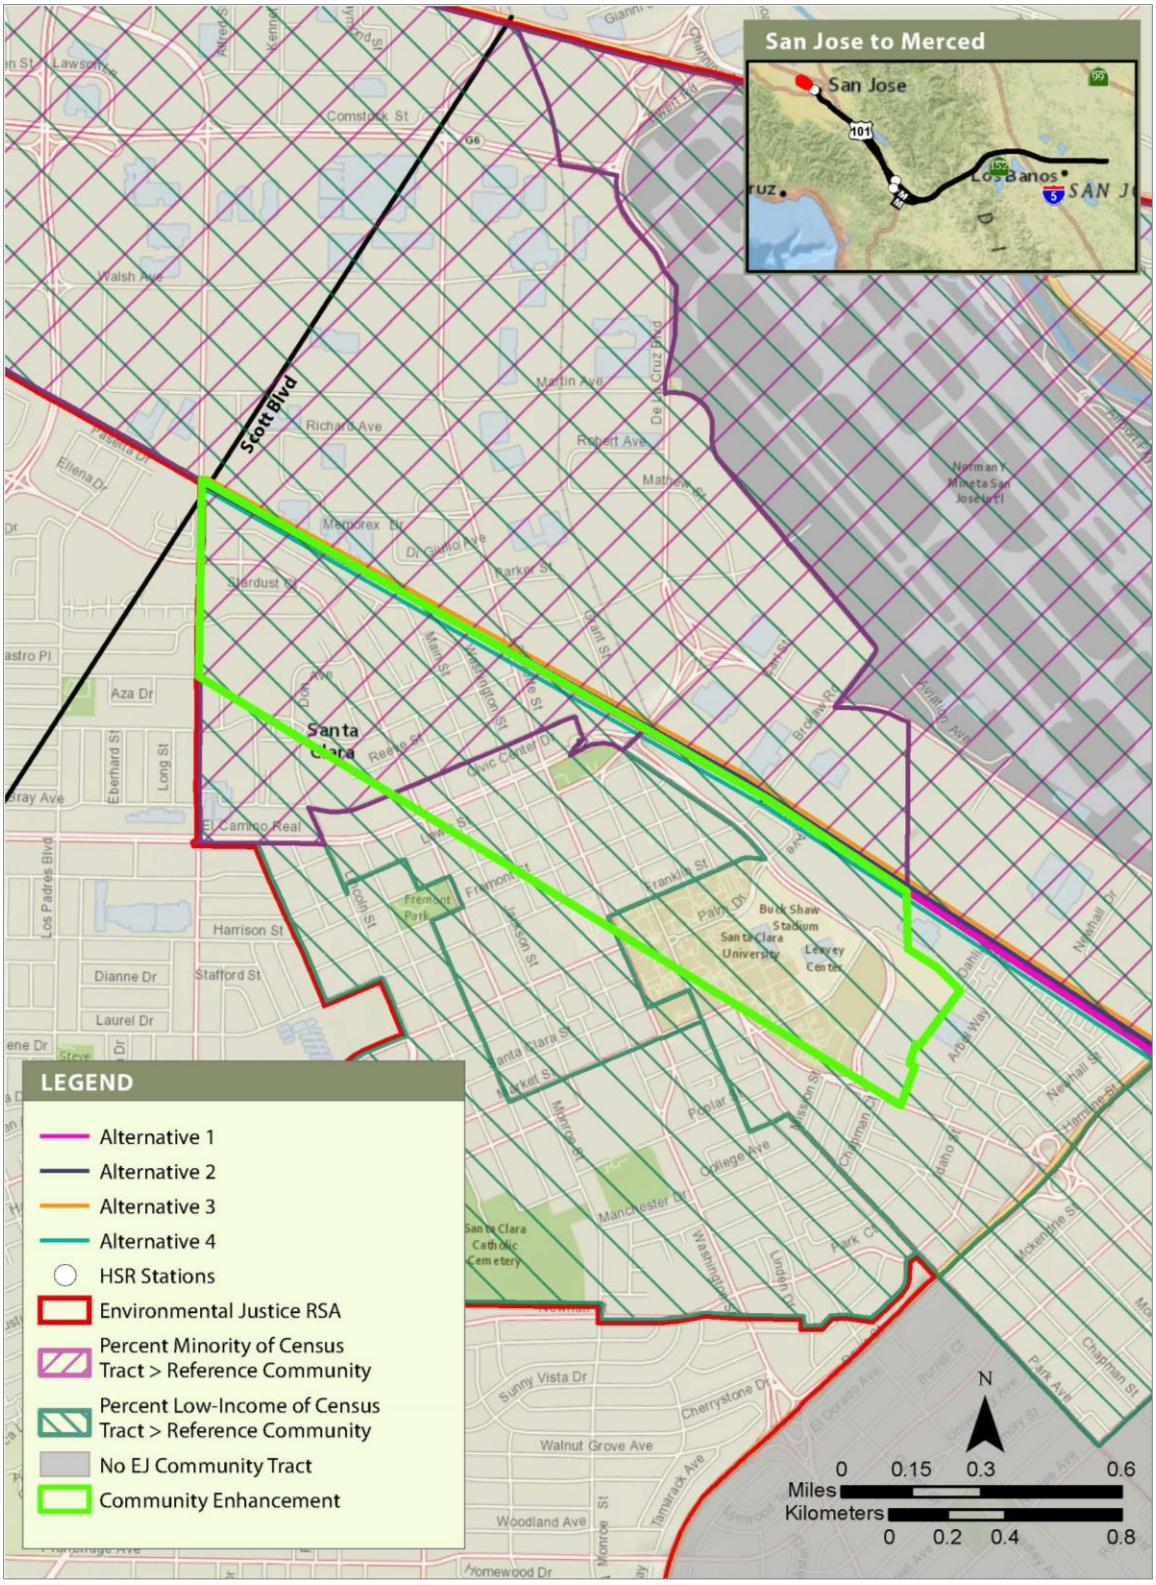

Figure SC/NSJ-3 Streetscape Improvements Santa Clara/North San Jose

4. OFFSETTING MITIGATION MEASURE SJD-OMM#1: STREETSCAPE IMPROVEMENTS TO DELMAS NEIGHBORHOOD

COMMUNITY: SAN JOSE DIRIDON

ALTERNATIVES: 1, 2, 3

Measure Description

The proposed improvement will provide streetscape improvements within the Delmas Neighborhood, specifically on Park Avenue, Auzerais Avenue, Bird Avenue, Montgomery Avenue, West San Carlos Avenue, and Gifford Avenue. Improvements could include enhanced pedestrian crossings, establishment of bicycle routes, sidewalk improvements, street lighting, street trees, and other landscaping. The scope of improvements included will be refined to be consistent with the Better Bike Plan 2025, when available.

Nexus to Disproportionately High and Adverse Effects

Under Alternatives 1, 2, and 3, the project would result in disproportionate, high, and adverse effects (DHAEs on low-income populations related to visual quality associated with elevated viaducts and embankment. There would be residual visual impacts within the San Jose Diridon community after the application of project mitigation and consideration of project benefits due to the aerial viaduct. DHAEs would be related to permanent visual effects associated with the visibility of the proposed aerial viaduct through this community. While the proposed improvement will not directly address operational visual effects resulting from the project, it will provide improvements that will help to offset visual DHAEs in this community by providing funding for streetscape improvements.

Benefit to Minority Populations and/or Low-Income Populations

The HSR alignment under Alternatives 1, 2, and 3 would traverse the San Jose Diridon community, where the percentage of low-income residents is greater than that within the reference community. The proposed improvement will improve visual quality, community cohesion, and livability and enhance connectivity for low-income residents. The location of the improvement relative to the HSR alignment within the San Jose Diridon community is shown in Figure SJD-1.

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following general goals from the Delmas Park Strong Neighborhood Initiative (SNI):

- Improve pedestrian connections to adjacent areas and facilities.
- Improve the appearance and physical condition of neighborhood streets.
- Improve conditions beneath and adjacent to freeways.

Among the SNI action items for Delmas Park are the following improvements:

- Improve West San Carlos Street Streetscape
- Improve Gifford Avenue Streetscape

- Improve Auzerais Avenue Streetscape
- Improve General Condition of Streets and Sidewalks
- Improve the Pedestrian Route to Gardner Academy

The SNI specifically recommends the establishment of the following pedestrian and bicycle streets:

- West San Carlos Street—Future neighborhood business district, major east-west bus/light rail transit (LRT) route
- Park Avenue—East/west link to downtown, residential density transition street
- Gifford Avenue—North/south link to LRT
- Bird/Montgomery Avenue—North/south link to Diridon Station
- Auzerais Avenue—East/west neighborhood collector street

These streets connect residential areas to commercial centers, public facilities, transit stations/stops, and downtown. Streetscape improvements, such as enhanced crosswalks, pedestrian scale lighting, shade trees, trash receptacles, and other elements, should be installed to enhance the safety and comfort of pedestrians.

Community Outreach Input and Relationship to DHAEs

Community concerns, as documented as part of the SNI, that are addressed include the following:

- Safety
- Visual quality
- Unsightly streetscapes
- Poor condition of streets and sidewalks
- Lack of street lighting
- Bleak and uninviting street frontages
- Deferred maintenance
- Streets that dead-end at I-280 have no secure fencing, allowing easy access to unsupervised areas under the freeway.

The City of San Jose also indicated that the Better Bike Plan 2025 designates this section of Delmas as a future bicycle boulevard and that a detailed scope would need to be defined though a planning and outreach process.

Because the HSR aerial alignments with Alternatives 1, 2, and 3 cross through this community, residents of the San Jose Diridon community would experience residual visual quality DHAEs. This improvement will provide related improvements to enhance visual quality. It will also provide general improvements in the form of improved safety, enhanced connectivity, enhanced livability, and community cohesion for residents in the San Jose Diridon community.

Improvements Cost Estimate

The SNI identifies specific improvements and associated costs for the following roadway improvements:

- West San Carlos Streetscape: $987,000 for preparation of a streetscape improvements plan; evaluation of pedestrian crossings; installation of enhanced crossings; feasibility study of center median; construction of center median; installation of frontage street trees; installation of frontage lighting; façade improvements.

- Gifford Avenue Streetscape: $286,000 for preparation of street tree and lighting improvements plans; improved pedestrian crossings; installation of street trees; installation of lighting.
- Auzerais Avenue Streetscape: $280,000 for preparation of street tree and lighting improvements plans; improved pedestrian crossings; installation of street trees; installation of lighting.
- Improve General Conditions of Streets and Sidewalks on Park and Montgomery: Assumed same approximate costs as Gifford/Auzerais above ($280,000 each) for evaluation of condition of neighborhood streets and sidewalks; street repairs; sidewalk repairs; installation of street trees.

These cost estimates are preliminary, as the SNI effort was done several years ago and improvements will need to be developed applying appropriate urban design guidelines from the City of San Jose, which may change the specific improvements proposed for the locations above.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to the City of San Jose for planning and implementation of improvements. Coordination with the California Department of Transportation (Caltrans) also will be required.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	10	This improvement will provide connectivity, safety, and quality of life benefits to the entire local community. This improvement was specifically identified by the community as a need in prior planning.
Relative Number of Beneficiaries	3	This improvement will benefit the entire community both along the streets above and in the surrounding areas.
Practicable	15	Funding for this improvement is practicable, and the project can be constructed.
Defined Project or Action	10	The conceptual improvements are identified; specific design has yet to be done.
Satisfy Authority Obligations	15	Improvement will benefit the community directly affected by the HSR project.
Defined Roles and Responsibilities	10	The Authority will provide funding. City of San Jose would implement. Coordination with Caltrans also would be required.
Evidence of Agreement	15	City of San Jose generally supports efforts like this.
Cost-Effectiveness	3	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	81	

Authority = California High-Speed Rail Authority; Caltrans = California Department of Transportation; HSR = high-speed rail.

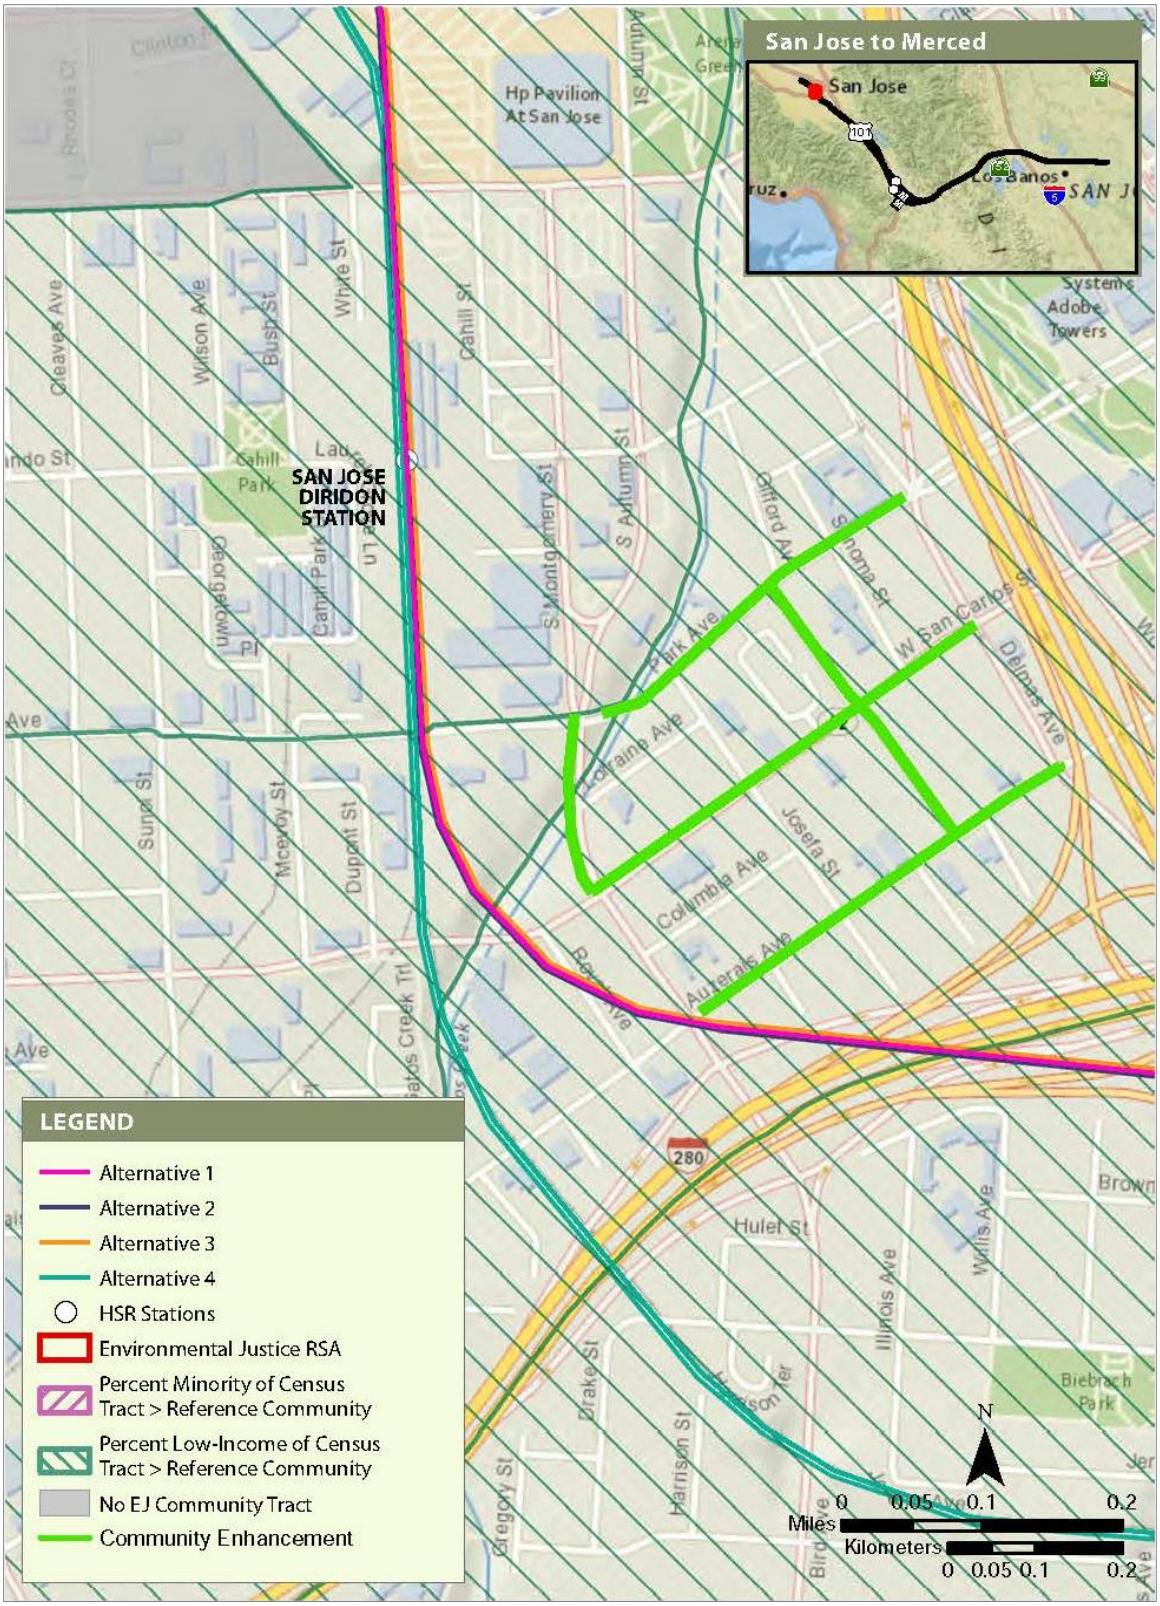

Figure SJD-1 Streetscape Improvements to Delmas Neighborhood San Jose Diridon

5. OFFSETTING MITIGATION MEASURE SJD-OMM#2: NOISE TREATMENTS FOR HOMES AFFECTED BY FREEWAY NOISE (I-280/SR 87)

COMMUNITY: SAN JOSE DIRIDON

ALTERNATIVE: 4

Measure Description

This offsetting mitigation measure will provide funding for building insulation and window treatments for homes directly adjacent to and affected by existing freeway noise adjacent to Interstate (I-) 280 and State Route (SR) 87.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAE) on low-income populations related to project-generated operational noise. There would be residual severe noise impacts within the San Jose Diridon community after the application of project noise barrier mitigation and consideration of project benefits. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations. While the proposed improvement will not directly address operational noise effects resulting from the project, it will provide a related offset representing an investment in community noise reduction and will reduce noise levels in the same community affected by project noise.

Benefit to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment under Alternative 4 would traverse the San Jose Diridon community, where the percentage of low-income residents is greater than that within the reference community. The proposed improvement will benefit the San Jose Diridon community's low-income community by reducing noise and improving health and livability (Figure SJD-2).

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. Launched in July 2000, the Strong Neighborhoods Initiative (SNI) was a partnership between the San Jose City Council, Mayor, the Redevelopment Agency, residents, and business owners. The goal of SNI was to improve neighborhood conditions, enhance community safety, facilitate community services, and strengthen neighborhood associations. The SNI was funded through resources from the City of San Jose, San Jose Redevelopment Agency, grants, private investments, and public-private partnerships. The Delmas Park neighborhood, which is in the San Jose Diridon community, is 1 of 20 neighborhoods designated for the SNI. The Delmas Park neighborhood is an area of low-income concentration that needs higher levels of investment to meet the needs of the community. This improvement will provide a benefit to residents living along these freeway corridors by providing building and window insulation to alleviate unwanted existing noise from the adjacent I-280 and SR 87 freeways on residential buildings.

Community Outreach Input and Relationship to DHAEs

Community concerns, as expressed by the residents and the City of San Jose, that are addressed include the following:

- Traffic

- Noise and vibration
- Safety and security

This improvement will provide noise abatement and improve health and livability for low-income residents living directly adjacent to I-280 and SR 87 in the San Jose Diridon community. Because the HSR alignments cross through this community, residents of the San Jose Diridon community would experience residual DHAE noise effects under Alternative 4.

Improvement Cost Estimate

There are approximately 41 single-family homes and 11 multifamily buildings in the Auzerais/Delmas neighborhoods directly adjacent to the north side of I-280 between Los Gatos Creek north and SR 87 and directly adjacent to the west side SR 87 from West San Fernando Street to I-280. Estimated costs are based on the average cost per property of the San Francisco International Airport noise abatement program (which is one of the largest in the country) of $12,632 per property for single-family homes. Assumed costs per multifamily building are $25,000 per building. Using these unit costs, the building and window insulation improvements for these homes would cost approximately $793,000.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to property owners to fund and implement this improvement and will fund the entire measure. A program implementer will need to be identified/developed to work with homeowners and building owners. The Authority will coordinate with City of San Jose regarding making homeowners aware of the program. The City would process any required encroachment and building permits needed for building upgrades.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This improvement will directly benefit low-income populations in the community relatively close to all alternative alignments and Diridon Station and could substantially improve the indoor noise environment by reducing noise from the existing freeways.
Relative Number of Beneficiaries	3	Only the residents with noise treatments will benefit. This will not benefit the entire community.
Practicable	10	Funding for this improvement is practicable. A program will need to be established to work with affected homeowners and building owners.
Defined Project or Action	10	Improvement is building insulation and window treatments. Exact criteria need to be developed.
Satisfy Authority Obligations	15	The improvement will provide community uplift. HSR project would result in noise effects so there is a nexus.
Defined Roles and Responsibilities	5	The Authority will fund and coordinate with homeowners through a program implementer. Program implementer needs to be identified. City of San Jose may be partner.
Evidence of Agreement	15	City supports addressing noise effects.
Cost-Effectiveness	6	Cost is high relative to estimated number of beneficiaries.
TOTAL SCORE	79	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

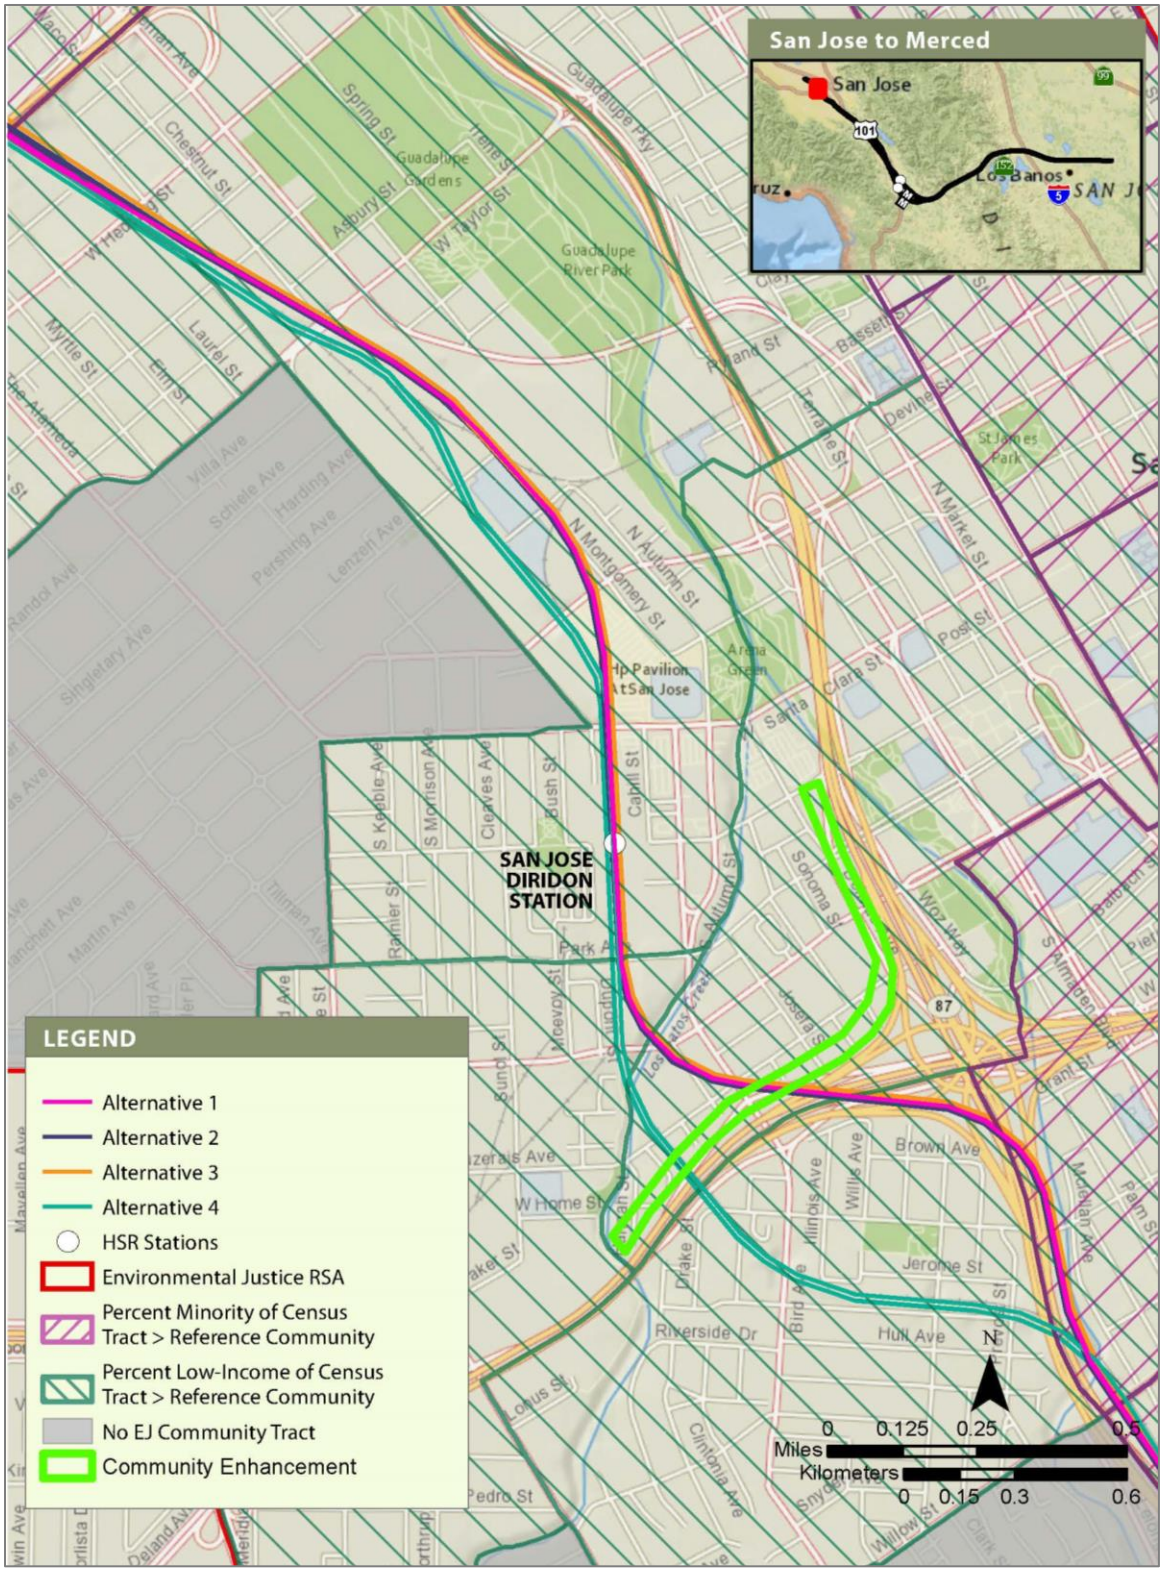

Figure SJD-2 Noise Treatments for Homes Affected by Freeway Noise (I-280/SR 87) San Jose Diridon

6. OFFSETTING MITIGATION MEASURE SJD-OMM#3: REESTABLISH INEZ C. JACKSON LIBRARY

COMMUNITY: SAN JOSE DIRIDON

ALTERNATIVE: 1, 2, 3, 4

Measure Description

The proposed improvement will provide funding for the reestablishment of the Inez C. Jackson Library space at the African American Community Service Agency (AACSA) Family Resource Center in San Jose. AACSA is willing to provide the space for the library but needs funding to renovate and modernize the space and to provide new furniture, books, computers and other electronics, and audio-visual equipment. The space would also need to be made Americans with Disabilities Act compliant.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionately high and adverse effects (DHAE) on low-income populations related to project-generated operational noise. There would be residual severe noise impacts within the San Jose Diridon community after the application of project noise barrier mitigation and consideration of project benefits. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations. Additionally, under Alternatives 1, 2, and 3, the project would result in DHAEs related to visual quality associated with elevated viaducts and embankment. While the proposed improvement will not directly address operational noise or aesthetics effects resulting from the project, it will provide a quiet space for community members to help offset noise effects from existing noise and from the train. More generally, this improvement also will represent an investment in a resource that serves at-risk populations within the community.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment under all project alternatives would traverse the communities around the San Jose Diridon Station, where the percentage of minority residents and low-income residents is greater than that within the reference community. The proposed improvement will benefit minority residents and low-income residents by providing a quiet refuge from project-generated noise, by expanding educational and technological resources in a renovated community space, and by promoting a sense of community identity (Figure SJD-3).

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following San Jose General Plan goals and policies:

- Goal ES-2 Libraries Maintain and expand Library Information Services within the City to:
  - Enrich lives by fostering lifelong learning and providing every member of the San José community access to a vast array of ideas and information
  - Give all members of the community opportunities for educational and personal growth throughout their lives
  - Develop partnerships to further the educational, cultural and community missions of organizations in San José
  - Support San José State University Library's educational mission in expanding the base of knowledge through research and scholarship.
  - Locate branch libraries in central commercial areas of neighborhoods for essential public access to library resources, events, and community meeting spaces, and to stimulate economic development.

  - Maximize branch library hours of operation to facilitate daily patronage.

Policies:

- ES-2.4 Recognize the central role that libraries play in neighborhood/community building by supporting and developing partnerships, collaboration and growth of library services to support community development.
- ES-2.5 Enhance social equity by providing programs and services that contribute to cultural enrichment and understanding, connection and learning for all segments of the San José community.
- ES-2.8 Measure Library service delivery to identify the degree to which library activities are meeting the needs of San José's community.
- ES-2.9 Foster a high-performing, collaborative library system responsive to changing customer and community needs.
- ES-2.10 Maintain resources and spaces in libraries to support community meetings, social gathering and the sharing and promoting of ideas as well as spaces for reading, and quiet study.

Community Outreach Input and Relationship to DHAEs

Community concerns, as expressed by the AACSA, that are addressed include the following:

- Need for learning and research hub for community
- Displacement of low-income populations
- Need for infrastructure investment
- Need for a dedicated space for community members to seek refuge from existing and project generated noise

Because the HSR aerial alignments with Alternatives 1, 2, and 3 across through this community, residents of the San Jose Diridon community would experience residual visual quality DHAEs. Under Alternative 4, the project would result in a DHAE related to project-generated operational noise. The library could provide a "quiet space" for community members to help offset noise effects from existing noise and from the train and more generally provide for improved educational opportunities and technology benefits for residents who access the library. The improvement will also help foster a sense of community identity.

Improvement Cost Estimate

Renovation and modernization would cost approximately $100,000 per an estimate from AACSA.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding, and the improvement would be implemented by AACSA.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	The improvement will provide increased awareness of African American history and experience for the entire community, which has always been a priority but is especially a concern at this time of acute attention to inequalities for the African American community locally and nationally.
Relative Number of Beneficiaries	15	The library will be available to the entire community.
Practicable	15	Funding for this improvement is practicable, and the materials can be obtained.
Defined Project or Action	15	The improvement is fully defined.
Satisfy Authority Obligations	15	The improvement will provide increased educational resources to enhance community awareness in a community affected by the HSR project.
Defined Roles and Responsibilities	15	The Authority will provide funding. The AACSA would implement.
Evidence of Agreement	15	AACSA agrees.
Cost-Effectiveness	15	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	120	

AACSA = African American Community Service Agency; Authority = California High-Speed Rail Authority; HSR = high-speed rail.

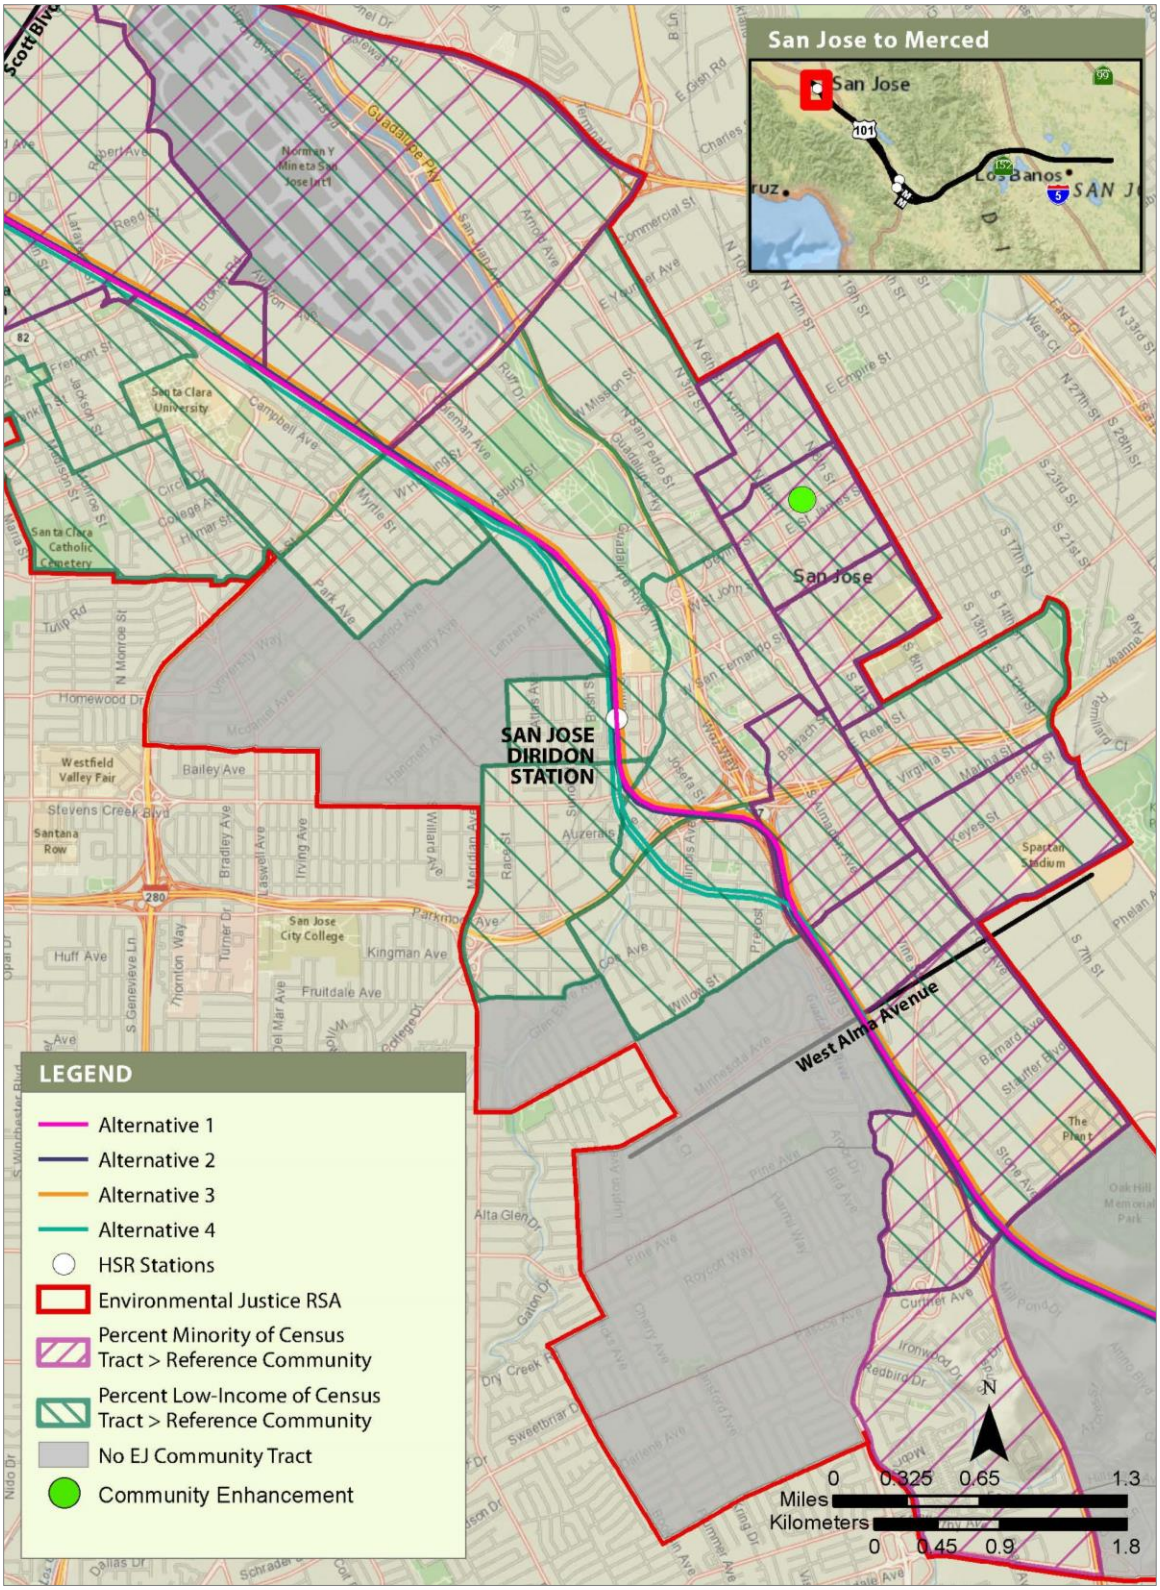

Figure SJD-3 Reestablish Inez C. Jackson Library San Jose Diridon

7. OFFSETTING MITIGATION MEASURE GWG-OMM#1: GARDNER ELEMENTARY NOISE TREATMENTS

COMMUNITY: GARDNER/WILLOW GLEN

ALTERNATIVE: 4

Measure Description

Potential improvements to improve the noise environment at Gardner Elementary could include noise treatments such as a sound wall barrier or other building and window insulation improvements to the buildings and walls adjacent to West William Street and Willis Avenue facades. Gardner Elementary (formerly Gardner Academy) is a Kindergarten–5 elementary school that currently has approximately 660 students. The school is in generally good physical condition and contains ample sports fields and playground areas. However, traffic noise from I-280 on the school is a concern.

Santa Clara VTA's I-280 Soundwalls Project is currently proposing to construct soundwalls on I-280 between State Route 87 and Los Gatos Creek including adjacent to the I-280 southbound lanes adjacent to the Gardner Elementary School. This project is scheduled to go through environmental clearance from 2020 to 2022, design and engineering in 2022 and 2023, and construction between 2023 and 2024. If the I-280 Soundwalls Project is advanced, then GWG-OMM#1 would be redundant with the soundwall project, provided a soundwall is placed adjacent to the southbound I-280 lanes such that it reduced traffic noise for the Gardner Elementary School. In that instance, this measure allows for the funds for noise treatments at the school to instead be provided to VTA to support the I-280 Soundwalls Project, provided the soundwalls installed would benefit the Gardner Elementary School and provided the San Jose to Merced HSR project section is fully funded prior to construction of the I-280 Soundwalls Project. If the project section is funded after construction of the I-280 Soundwalls Project, then the Authority would not be able to fund the Soundwalls Project. If no funding is provided to the VTA I-280 Soundwalls Project by the Authority and the soundwalls project is completed and there still remain traffic noise effects to the Gardner Elementary School, then the Authority could provide funding for school building treatments as needed to address that residual noise.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAE) on low-income populations related to project-generated operational noise. There would be residual severe noise impacts within the Gardner/Willow Glen community, where Gardner Elementary School is located, after the application of project noise barrier mitigation and consideration of project benefits. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations. While the proposed improvement will not directly address operational noise effects resulting from the project, it will provide a related offset representing an investment in community noise reduction at a sensitive receptor that already experiences traffic noise from I-280. The improvement will reduce noise levels in the same community affected by project noise.

Benefit to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment would pass through (Alternative 4) or along the northern edge of (Alternatives 1, 2, and 3) the Gardner/Willow Glen community, where the percentage of low-income residents is greater than that within the reference community. The proposed improvement will benefit the community's low-income population by improving the educational environment at Gardner Elementary. The location of the proposed improvement relative to the HSR alignment within the Gardner/Willow Glen community is shown in Figure GWG-1.

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. Launched in July 2000, the Strong Neighborhoods Initiative (SNI) was a partnership between the San Jose City Council, Mayor, the Redevelopment Agency, residents, and business owners. The goal of SNI was to improve neighborhood conditions, enhance community safety, facilitate community services, and strengthen neighborhood associations. The SNI was funded through resources from the City of San Jose, San Jose Redevelopment Agency, grants, private investments, and public-private partnerships. Greater Gardner is 1 of 20 neighborhoods designated for the SNI. The proposed improvement will be consistent with the Greater Gardner Neighborhoods Improvement Plan goal to improve neighborhood conditions at Gardner Elementary. The proposed improvement also will be consistent with the San Jose City Council goal of ensuring neighborhoods benefit equally from City services.

Community Input and Relationship to DHAEs

Community concerns, as expressed by San Jose Unified School District staff, that are addressed include the following:

- Student health
- Campus physical conditions

This improvement will provide for improved sound conditions, and therefore an improved educational environment, around Gardner Elementary, which services the Gardner/Willow Glen community. Because the HSR alignment would travel through the middle of this community under Alternative 4, these same residents would experience various project effects under this alternative and would experience residual noise DHAEs under Alternative 4 after the application of project mitigation and consideration of project benefits.

Improvement Cost Estimate

This measure includes potentially providing a sound wall barrier or building and window insulation improvements to the building and windows on West William Street and Willis Avenue. The sound wall option is estimated at up to 600 feet in length, up to 14 feet high, with assumed cost of $70 per square foot, which corresponds to $588,000. The sound wall will either be: (1) on school property along the south side of W. William Street (and the northwest side of Willis Avenue) or (2) be north of W. William Street (if permission can be obtained from Caltrans/City of San Jose presuming public ownership). No right-of-way costs were presumed for the sound wall option. Estimated costs for building/window treatments are based on the average cost per property of the San Francisco International Airport noise abatement program (which is one of the largest in the country) of $25,000 per property for multifamily homes. Using these unit costs, the building and window insulation improvements for the equivalent of five multifamily homes would cost approximately $125,000. Window treatments and building insulation could be applied to buildings facing I-280 along W. William Street and the building on the northeast side of the campus along Willis Avenue.

If the I-280 Soundwalls Project is advanced, then GWG-OMM#1 would be redundant with the soundwall project, provided a soundwall is placed adjacent to the southbound I-280 lanes such that it reduced traffic noise for the Gardner Elementary School. In that instance, this measure

allows for the funds for noise treatments at the school to instead be provided to VTA to support the I-280 Soundwalls Project, provided the soundwalls installed would benefit the Gardner Elementary School.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to the San Jose Unified School District for planning and implementation of this project. San Jose Unified School District controls its property. If the VTA I-280 Soundwalls Project is advanced, then the funding will be provided to VTA instead, provided the soundwalls included in that project would benefit the Gardner Elementary School.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Noise improvements will benefit Gardner Elementary schoolchildren.
Relative Number of Beneficiaries	3	This is the primary elementary school in the neighborhood and will benefit surrounding low-income populations, particularly families with school-aged children.
Practicable	10	Funding for this improvement is practicable; low-cost request.
Defined Project or Action	15	Noise improvements are defined.
Satisfy Authority Obligations	15	Improvement will provide neighborhood condition benefits to affected community.
Defined Roles and Responsibilities	15	Authority will provide funding, and San Jose Unified School District would design, maintain, and implement improvements. If the VTA I-280 Soundwalls Project is advanced, the Authority will instead provide funding to VTA provided a soundwall benefitting the Gardner Elementary School is included in that project.
Evidence of Agreement	15	San Jose Unified School District suggested this improvement. VTA is already planning for the VTA I-280 Soundwalls Project.
Cost-Effectiveness	6	Cost is high relative to estimated number of beneficiaries.
TOTAL SCORE	94	

Authority = California High-Speed Rail Authority.

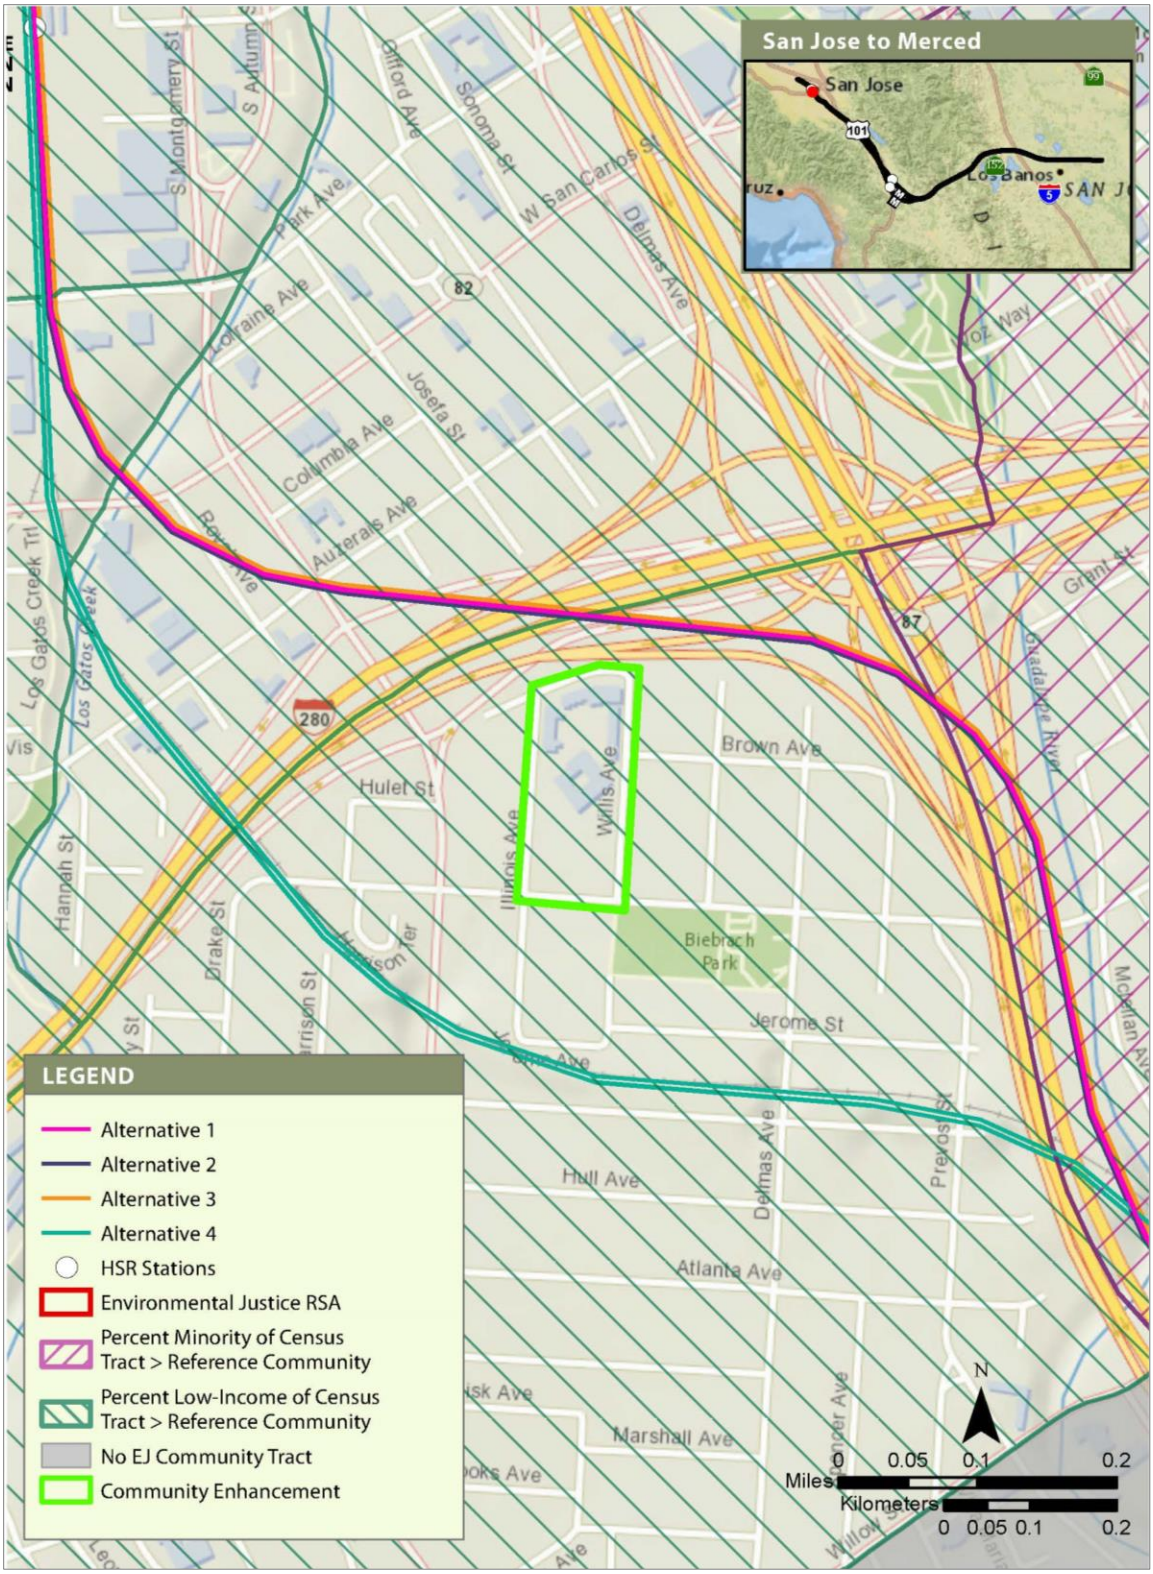

Figure GWG-1 Gardner Elementary Noise Treatment
Gardner/Willow Glen

8. OFFSETTING MITIGATION MEASURE GWG-OMM#2: NOISE TREATMENTS FOR RESIDENTIAL BUILDINGS

COMMUNITY: GARDNER/WILLOW GLEN

ALTERNATIVE: 4

Measure Description

The proposed improvement will provide funding for building insulation and window treatments for up to 43 homes affected by existing freeway noise adjacent to Interstate (I-) 280 and State Route (SR) 87. The improvement will consist of building and window insulation improvements for the homes along I-280 (at Los Gatos Creek) and SR 87 (to Willow Street).

If the Santa Clara VTA's I-280 Soundwalls Project is advanced (currently scheduled to be constructed by 2024), it would include soundwalls on the south side of I-280 between Los Gatos Creek and SR 87, which would obviate the need for building noise treatments in the neighborhood adjacent to I-280. If that happens, then this measure would only include treatments along SR 87 for up to approximately 15 homes and any homes on the south side of I-280 between Los Gatos Creek and SR 87 with residual traffic noise effects after soundwall construction (for example where gaps in soundwalls may exist.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAE) on low-income populations related to project-generated operational noise. There would be residual severe noise impacts within the Gardner/Willow Glen community after the application of project noise barrier mitigation and consideration of project benefits. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations. While the proposed improvement will not directly address operational noise effects resulting from the project, it will provide a related offset representing an investment in community noise reduction and will reduce noise levels in the same community affected by project noise.

Benefit to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment would traverse the Gardner/Willow Glen community (Alternative 4) or travel around the community, where the percentage of low-income residents is greater than that within the reference community. Low-income populations are present throughout the community in the vicinity of the alignment. The proposed improvement will benefit the community's low-income populations by providing noise reduction, health benefits, and livability improvements (Figure GWG-2).

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. Launched in July 2000, the Strong Neighborhoods Initiative (SNI) was a partnership between the San Jose City Council, Mayor, the Redevelopment Agency, residents, and business owners. The goal of SNI was to improve neighborhood conditions, enhance community safety, facilitate community services, and strengthen neighborhood associations. The SNI was funded through resources from the City of San Jose, San Jose Redevelopment Agency, grants, private investments, and public-private partnerships. Greater Gardner is 1of 20 neighborhoods

designated for the SNI. The Greater Gardner neighborhood is an area of low-income concentration that needs higher levels of investment to meet the needs of the community. Alternative 4 would cross through the Greater Gardner neighborhood along the Caltrain corridor. This improvement will provide a benefit to residents living along these freeway corridors by providing building and window insulation to alleviate unwanted existing noise from the adjacent I-280 and SR 87 freeways on multifamily residential buildings.

Community Outreach Input and Relationship to DHAEs

Community concerns regarding noise effects were expressed by multiple stakeholders in San Jose. Concerns regarding traffic noise were also documented in the Greater Gardner Community Plan and noted during the Gardner neighborhood walk in January 2019.

This improvement will provide noise abatement as well as livability and health benefits for low-income residents adjacent to I-280 and SR 87. Because the HSR alignment would travel through the middle of this community under Alternative 4, the community would experience residual noise DHAEs under Alternative 4 after application of project mitigation and consideration of project benefits.

Improvement Cost Estimate

There are approximately 43 single-family homes in the Gardner/Willow Glen community directly adjacent to I-280 between Los Gatos Creek and SR 87 and directly adjacent to the ramp from I-280 to SR 87 to the point where the existing noise barrier on the west side of SR 87 begins. Estimated costs are based on the average cost per property of the San Francisco International Airport noise abatement program (which is one of the largest in the country) of $12,632 per property for single-family homes. Using these unit costs, the building and window insulation improvements for these homes would cost approximately $543,000 if this measure addresses 43 homes. If the VTA I-280 Soundwalls Project is completed, then the treatments along SR 87 for up to 15 homes would have an associated cost of $190,000.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to property owners to fund and implement this improvement and will fund the entire measure. A program implementer will need to be identified/developed to work with homeowners and building owners. The Authority will coordinate with City of San Jose regarding making homeowners aware of the program. The City would process any required encroachment and building permits needed for building upgrades.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	These communities are already affected by transportation noise, and this will provide direct benefit to these low-income populations.
Relative Number of Beneficiaries	3	Improvement will directly benefit low-income populations along the freeways and not most of the community.
Practicable	15	Funding for this improvement is mostly practicable, need mechanism for implementing. Relatively low-cost request.
Defined Project or Action	10	The Authority will provide funding; need implementer.
Satisfy Authority Obligations	15	Addresses noise from transportation infrastructure.
Defined Roles and Responsibilities	5	Authority and individual property owners or California Department of Transportation.
Evidence of Agreement	15	City supports addressing noise effects.
Cost-Effectiveness	3	Cost is high relative to estimated number of beneficiaries.
TOTAL SCORE	81	

Authority = California High-Speed Rail Authority.

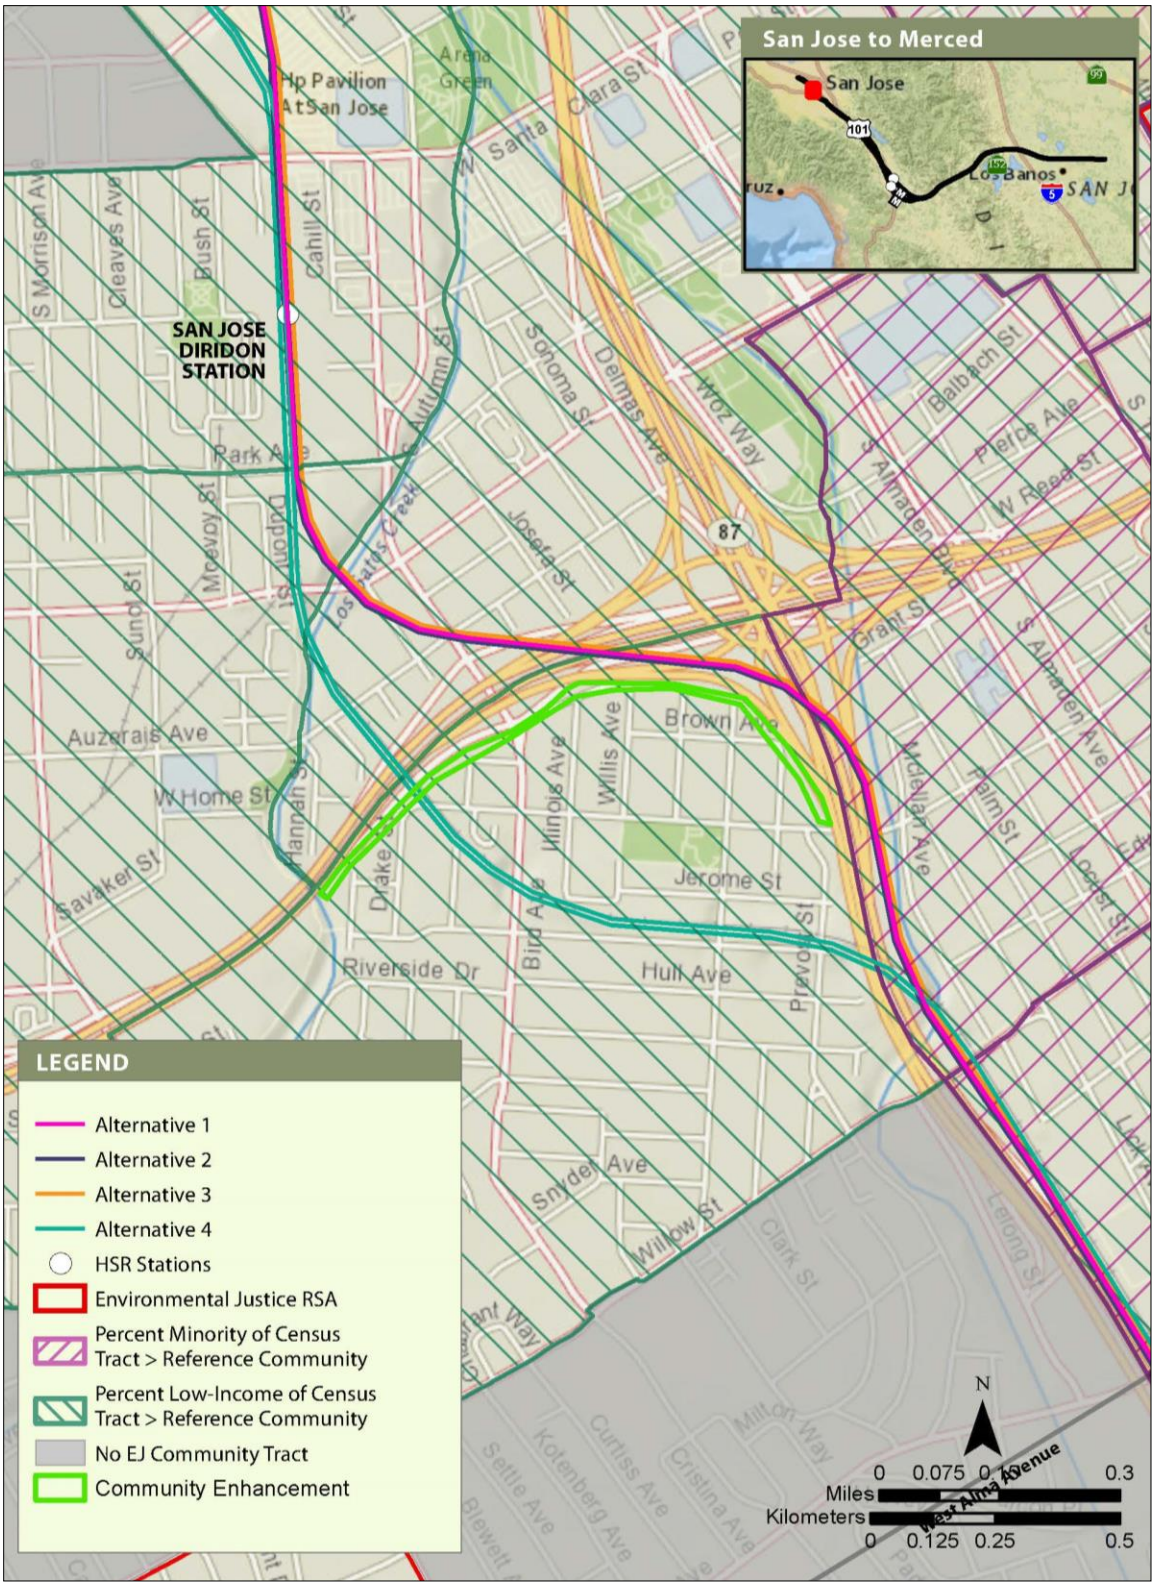

Figure GWG-2 Noise Treatments for Residential Buildings Along SR87/I-280 to Address Existing Noise

Gardner/Willow Glen

9. OFFSETTING MITIGATION MEASURE GWG-OMM#3: FULLER PARK/FULLER AVENUE RECREATIONAL AMENITIES

COMMUNITY: GARDNER/WILLOW GLEN

ALTERNATIVE: 4

Measure Description

A number of small vacant parcels are scattered throughout the Gardner/Willow Glen community, all owned by public entities. For example, a parcel adjacent to the intersection of Coe and Bird Avenues was improved by residents with landscaping, heritage lights, and a walking path some years ago. This space has fallen into disrepair but has been funded for renovation per the Greater Gardner Neighborhood Improvement Plan. Fuller Park is of specific concern given the low quality of existing material; that is, turf and fencing. Renovation of this Fuller Park site could include children's play areas with equipment, picnic benches, fitness equipment, bicycle racks, or other smaller amenities.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionately high and adverse effects (DHAE) on low-income populations related to project-generated operational noise. There would be residual severe noise impacts within the San Jose Diridon community after the application of project noise barrier mitigation and consideration of project benefits. While the proposed improvement will not address operational noise resulting from the project, it will represent an offset to project effects that will provide a quality-of-life improvement for the low-income residents who would be affected by DHAEs of the project.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment under Alternative 4 would traverse the Gardner/Willow Glen community, and under Alternatives 1, 2, and 3 the HSR alignment would go around the community where the percentage of low-income residents is greater than that within the reference community. Low-income populations are present throughout the community in the vicinity of the alignment. The proposed improvement will provide recreation, community cohesion, and livability benefits to the low-income populations in the Gardner/North Willow Glen community (Figure GWG-3).

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. Launched in July 2000, the Strong Neighborhoods Initiative (SNI) was a partnership between the San Jose City Council, Mayor, the Redevelopment Agency, local residents, and business owners. The goal of SNI was to improve neighborhood conditions, enhance community safety, facilitate community services, and strengthen neighborhood associations. The SNI was funded through resources from the City of San Jose, San Jose Redevelopment Agency, grants, private investments, and public-private partnerships. Greater Gardner was 1 of 20 neighborhoods designated for the SNI.

The purpose of this project is to create a pocket park in accordance with the City's Greater Gardner Neighborhood Improvement Plan, adopted in January 2002. The Greater Gardner Neighborhood Improvement Plan includes the following goals:

- Improve the overall condition of neighborhood streets and sidewalks.
- Improve and maintain the appearance and condition of community streetscapes.
- Expand and improve neighborhood open spaces to better serve the needs of the community.
- Improve and maintain current open space and develop City owned vacant properties.

This project is also consistent with the San Jose General Plan policies that include:

- PR-1.9 As Urban Village areas redevelop, incorporate urban open space and parkland recreation areas through a combination of high-quality, publicly accessible outdoor spaces provided as part of new development projects; privately or, in limited instances, publicly owned and maintained pocket parks; neighborhood parks where possible; as well as through access to trails and other park and recreation amenities.
- PR-3.1 Provide equitable access to parks, trails, open space, community centers, dog parks, skate parks, aquatics facilities, sports fields, community gardens, and other amenities to the greatest extent feasible in order to provide a high quality of life for our residents.
- PR-7.1 Encourage non-vehicular transportation to and from parks, trails, and open spaces by developing trail and other pleasant walking and bicycle connections to existing and planned urban and suburban parks facilities.

Community Input and Relationship to DHAEs

While specific community input was not received during the HSR scoping process concerning the particular remnant parcel at the end of Fuller Avenue, the lot is identified in the Greater Gardner Neighborhood Improvement Plan as an opportunity to provide additional usable open space in the City of San Jose and specifically in the Gardner neighborhood. During a neighborhood walk of the Gardner neighborhood in December 2019, members of the Gardner Neighborhood Association cited concerns about further isolation of the community and preservation of and upgrades to Fuller Park. The City of San Jose has indicated that staff is supportive of a range of recreational activities at this site and that determination of the scope of the improvement would occur via a public process. Furthermore, during Outreach #3, the City highlighted community concerns about the project's effects on the community more broadly, and on Fuller Park more specifically, and recommended this improvement as a way to offset such concerns and promote quality of life in the community.

This improvement will provide for increased recreational opportunities and improved community cohesion and livability for residents of this community. Because the HSR alignment would travel through the middle of this community under Alternative 4, these same residents would experience various project effects under this alternative. Therefore, this improvement will apply under Alternative 4.

Improvement Cost Estimate

Fuller Park extends from Bird Avenue to Prevost Street, with some interruptions for homes near Bird Avenue and a church in the middle of the linear park, for approximately 1,500 feet. As a linear park, new features will be limited to minor children's play equipment or fitness equipment, picnic benches, bicycle racks, or other smaller amenities. New equipment is estimated at $140,000; soft costs, including design and approvals, would likely require an additional $50,000; resulting in $190,000.

Roles and Responsibilities

The City of San Jose receives CDBG funding to implement projects that benefit the City's low-income neighborhoods and minority neighborhoods. The City of San Jose would implement this improvement using California High-Speed Rail Authority (Authority) funding in combination with potential CDBG funds.

Assessment Based on Selection Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This existing park serves low-income populations in the community and is centrally located.
Relative Number of Beneficiaries	6	This park serves the surrounding low-income populations.
Practicable	15	Funding and construction for this improvement is practicable; low-cost request.
Defined Project or Action	10	Site is defined, and amenities are standard.
Satisfy Authority Obligations	15	Recreation will be provided, not safety or connectivity.
Defined Roles and Responsibilities	15	Authority will provide funding, and City of San Jose would implement.
Evidence of Agreement	15	City agrees.
Cost-Effectiveness	15	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	106	

Authority = California High-Speed Rail Authority.

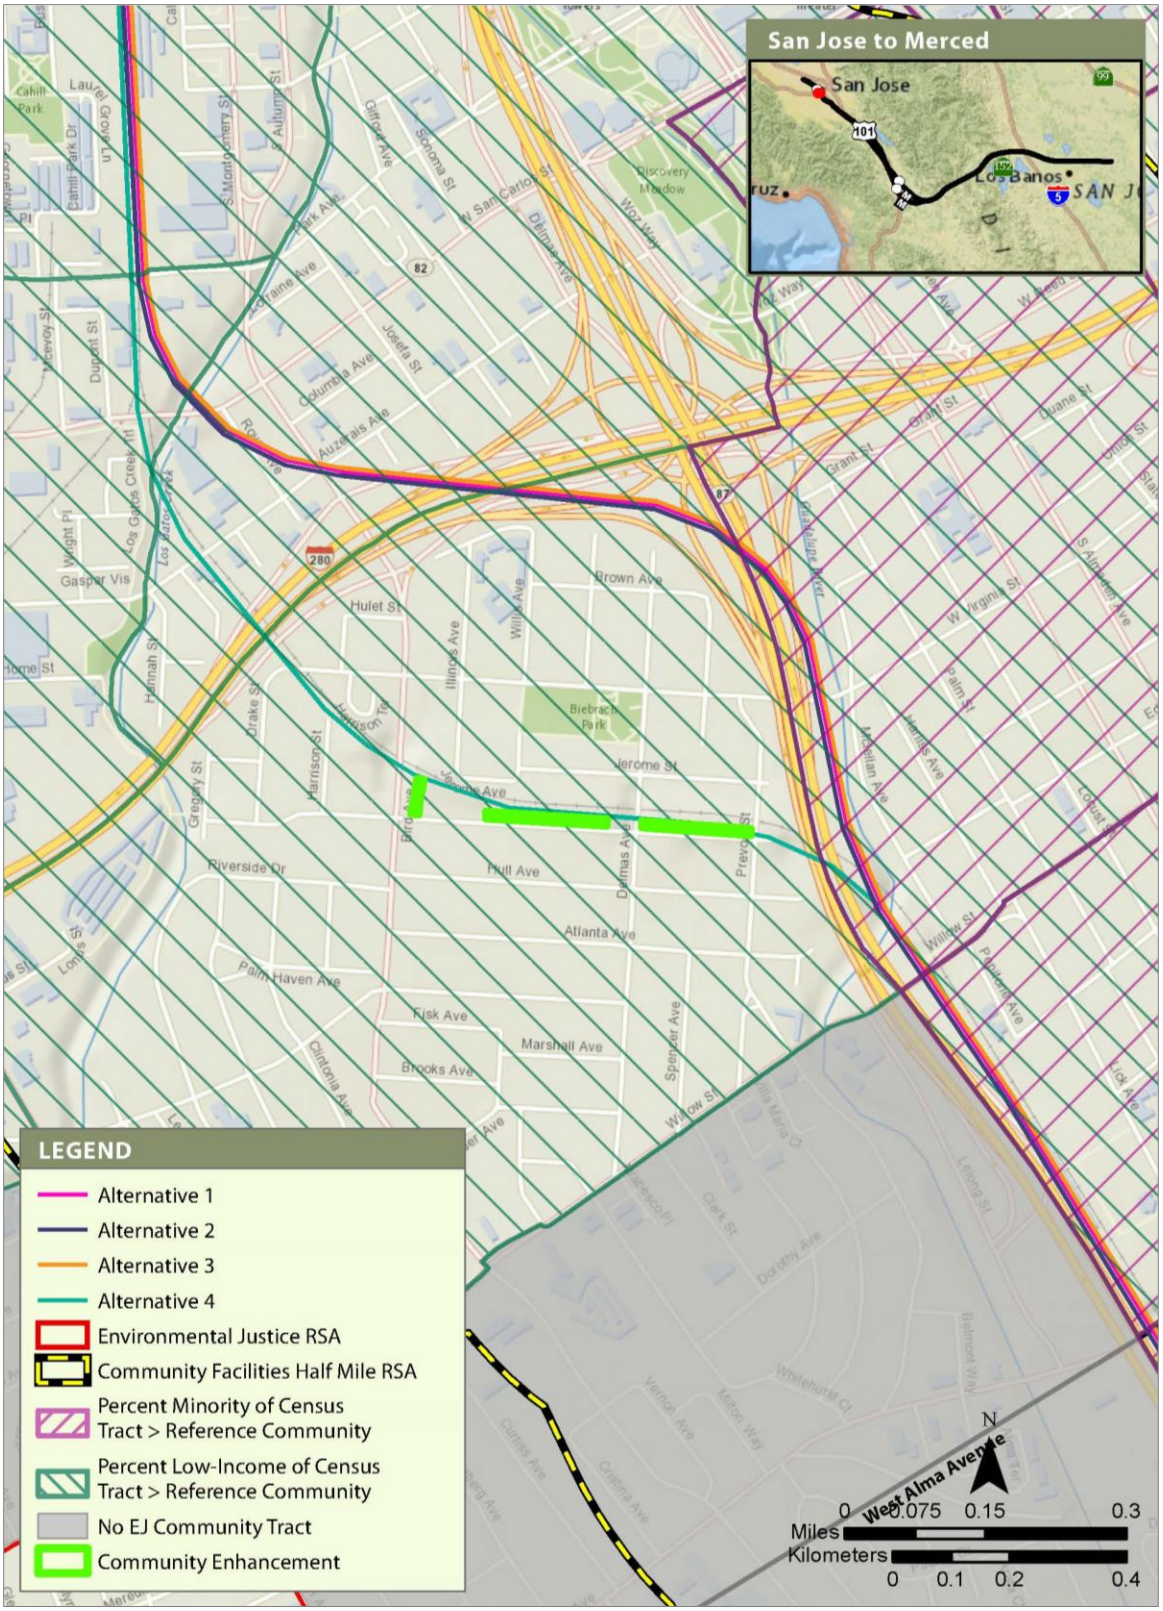

Figure GWG-3 Fuller Park/Fuller Avenue Recreational Amenities Gardner/Willow Glen

10. OFFSETTING MITIGATION MEASURE WGTA-OMM#1: COMMUNITY ART/LOCAL ART FOR STRUCTURES

COMMUNITY: WASHINGTON/GUADALUPE, TAMIEN, AND ALMA/ALMADEN

ALTERNATIVES: 1, 2, 3

Measure Description

The proposed improvement will provide funding for public art and beautification projects in the Washington/Guadalupe, Tamien, and Alma/Almaden community and for any project noise walls or other structures with paintable surfaces that may otherwise become targets for vandalism.

Nexus to Disproportionately High and Adverse Effects

Under Alternatives 1, 2, and 3, the project would result in disproportionate, high, and adverse effects (DHAE) on low-income populations related to the visual effects of project operation. There would be residual visual impacts within the Washington/Guadalupe, Tamien, and Alma/Almaden community after the application of project mitigation and consideration of project benefits. DHAEs would be related to the visual effect of the aerial alignment through this community. While the proposed improvement will not directly address the visual effects resulting from the project, it will provide a related improvement that will enhance the visual quality of this community through the provision of community art and by reducing vandalism and potential violence associated with gang-generated graffiti.

Benefit to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment would pass adjacent to the Washington/Guadalupe, Tamien, and Alma/Almaden community, where the percentage of minority populations and low-income populations is greater than that within the reference community.

The proposed improvement will benefit the community's minority residents and low-income residents by providing enhanced neighborhood visual quality, identity, and livability. The proposed improvement will be implemented at various locations in the community, as determined by community artists in consultation with the City and community. The proposed improvement will benefit by promoting the placement of local art on surfaces that normally may be targets for territorial vandalism and associated gang violence.

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. Launched in July 2000, the Strong Neighborhoods Initiative (SNI) was a partnership between the San Jose City Council, Mayor, the Redevelopment Agency, residents, and business owners. The goal of SNI was to improve neighborhood conditions, enhance community safety, facilitate community services, and strengthen neighborhood associations. The SNI was funded through resources from the City of San Jose, San Jose Redevelopment Agency, grants, private investments, and public-private partnerships. The Washington neighborhood is 1 of 20

neighborhoods designated for the SNI. The proposed improvement will be consistent with the following goals of the Washington Neighborhood Revitalization Plan:

- The neighborhood is an enjoyable place.
- Residents can walk, play, and socialize safely and comfortably in the community.
- There are safe, attractive places for children to play and for the community to interact.
- The appearance of the neighborhood is enhanced with attractive buildings, appropriate landscaping, and street improvements.
- The sense of community pride for residents is maintained and strengthened.

The proposed improvement also will be consistent with the following San Jose General Plan goals and policies:

Goal AC-2 – High Impact Public Art

Integrate high impact public art throughout the community.

Policies – High Impact Public Art

- **AC-2.1** Site public art in key locations. Prioritize innovative public art in three regional destination areas: Downtown, North San José, and the Mineta San José International Airport. Place public art at transportation hubs: pedestrian, bike and transit improvements in pedestrian priority areas; encourage the inclusion of public art at VTA and BART stations, including Diridon Station; and integrate a broad range of art projects into the trail network to connect neighborhoods and bring people closer to nature. Integrate public art into bond-funded park, library, community facility and public safety projects. Cultivate community-based art projects that support neighborhood revitalization goals.
- **AC-2.2** Integrate planning for public art in other City planning efforts, including area specific planning processes, and Urban Village master planning processes.

Action – High Impact Public Art

- **AC-2.3** Explore opportunities to address cultural amenities as part of the private development process, including the incorporation of on or off-site public art, and facilities and activities that support art and culture through a private development funding contribution.

Goal CD-1 – Attractive City

Create a well-designed, unique, and vibrant public realm with appropriate uses and facilities to maximize pedestrian activity; support community interaction; and attract residents, business, and visitors to San José.

Policies – Attractive City

- **CD-1.2** Install and maintain attractive, durable, and fiscally- and environmentally sustainable urban infrastructure to promote the enjoyment of space developed for public use. Include attractive landscaping, public art, lighting, civic landmarks, sidewalk cafés, gateways, water features, interpretive/way-finding signage, farmers markets, festivals, outdoor entertainment, pocket parks, street furniture, plazas, squares, or other amenities in spaces for public use. When resources are available, seek to enliven the public right-of-way with attractive street furniture, art, landscaping and other amenities.
- **PR-4.6** Where feasible and appropriate, strategically incorporate public art into parks, trails, and recreation facilities, with preference given to public art that reflects the culture and identity of the surrounding community, local history, or the ecology of the area.

Additionally, the improvement will be consistent with the following guidance from the California High-Speed Rail Authority (Authority) regarding non-station structures:

- Consistent with federal, state, and local policies promoting the integration of art into public buildings and places, artistic expression should be integrated into California High Speed Train Project (CHSTP) structures when appropriate and feasible. Space may be identified by the Regional Consultants and the community for introduction of artwork underneath high-speed train aerial structures. Candidate locations for artwork shall have high potential for public visibility and public use. Artwork should enhance and reflect the unique character of the surrounding neighborhood or geographical region. Artwork may be freestanding or attached to high-speed train facilities. The Authority will engage with communities to establish a budget for public art appropriate for the high-speed train project and consistent with state and national policies.

Community Outreach Input and Relationship to DHAEs

Community input during the neighborhood site tour with the Guadalupe-Washington Safety Coalition in February 2020 expressed the desire for more public art in the community. Goals were also expressed in the Washington Neighborhood Revitalization Plan to promote improvements that make the community an enjoyable place, improve its physical appearance, and promote and maintain a sense of community pride. Local residents and community organization staff have also indicated that any new surfaces, including sound walls and other ancillary structures, could be subject to vandalism in the form of graffiti and that gang violence can occur in connection with such vandalism. Covering blank walls with murals, especially by local artists, could help curb the potential for such violence by promoting respect for and ownership of community-generated art.

This improvement will provide funding for public art and beautification projects that will benefit residents by providing visual quality, community identity, and livability improvements. Because the HSR alignment would travel adjacent to this community under Alternatives 1, 2, and 3 and the community would experience associated residual impacts, this improvement will apply to these alternatives.

Improvement Cost Estimate

The specific art installations are not defined at this time. Instead, this improvement will include $500,000 to support, develop, and implement a community art program; or provide the funding to the City's existing 1 percent for art fund.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will fund local artists to develop community art projects. Projects would be designed and implemented through collaboration between community artists, the community, and the City of San Jose. Funding will be available through grants that will support the design and implementation of public art installations within 0.5 mile of the HSR project on public land and where appropriate on publicly accessible project structures (such as viaduct footings) adjacent to the community. The program will be led by local artists that will engage local youth in the design and installation process.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	10	Community art will enhance a sense of community in an area adjacent to the HSR alignment.
Relative Number of Beneficiaries	3	Art installation will broadly benefit the community at large by enhancing community character.
Practicable	15	Funding for this improvement is practicable, and there are public locations (streets, parks, schools, public right-of-way) and/or accessible project structures (viaduct footings).
Defined Project or Action	10	Program development will require effort to identify local community artists, to go through planning and art development, and to involve residents in the art development and installation.
Satisfy Authority Obligations	15	Improvement will improve community aesthetics and identity in an area affected by the HSR project.
Defined Roles and Responsibilities	15	Authority could provide funding to City's existing 1% for art fund.
Evidence of Agreement	15	City supports providing opportunities for community art.
Cost-Effectiveness	12	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	95	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

11. OFFSETTING MITIGATION MEASURE WGTA-OMM#2: STREETSCAPE IMPROVEMENTS (GOODYEAR, HUMBOLDT, FLOYD)

COMMUNITY: WASHINGTON/GUADALUPE, TAMIEN, AND ALMA/ALMADEN

ALTERNATIVES: 1, 2, 3

Measure Description

This improvement will consist of streetscape improvements (crosswalks, trees, and bicycle wayfinding) to Goodyear Street, Humboldt Street, and Floyd Street from Lick Avenue to Locust Street. The improvement will be designed in alignment with the City of San Jose's Better Bike Plan 2025, and its scope will be defined through a City-led planning and outreach process.

Nexus to Disproportionately High and Adverse Effects

Under Alternatives 1, 2, and 3, the project would result in disproportionate, high, and adverse effects (DHAE) on low-income populations related to visual quality. There would be residual visual impacts within the Washington, Guadalupe, Tamien, and Alma/Almaden community after the application of project mitigation and consideration of project benefits. DHAEs would be related to permanent visual effects associated with the visibility of the proposed aerial viaduct through this community. While the proposed improvement will not directly address operational visual effects resulting from the project, it will provide offsetting mitigation measures that will offset visual DHAEs in this community by providing funding for streetscape improvements.

Benefits to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment would pass along the western edge of the Washington/Guadalupe, Tamien, and Alma/Almaden community, where the percentage of minority populations and low-income populations is greater than that within the reference community.

The proposed improvement will benefit the community's minority residents and low-income residents by providing visual quality, safety, and livability improvements in the Washington/Guadalupe, Tamien, and Alma/Almaden community. The location of the proposed improvement relative to the HSR alignments adjacent to the Washington/Guadalupe, Tamien, and Alma/Almaden community is shown graphically in Figure WGTA-2.

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. Launched in July 2000, the Strong Neighborhoods Initiative (SNI) was a partnership between the San Jose City Council, Mayor, the Redevelopment Agency, residents, and business owners. The goal of SNI was to improve neighborhood conditions, enhance community safety, facilitate community services, and strengthen neighborhood associations. The SNI was funded through resources from the City of San Jose, San Jose Redevelopment Agency, grants, private investments, and public-private partnerships. The Washington neighborhood is 1 of 20 neighborhoods designated for the SNI. The proposed improvement will be consistent with the

goal of the Washington Neighborhood Revitalization Plan to foster a community where residents can walk, play, and socialize safely and comfortably in the community.

The improvement also is consistent with the City of San Jose Pedestrian Master Plan goals and recommendations and the City's General Plan Major Strategy #6, which calls for streets to be designed for people, not just cars, and to support a diverse range of urban activities and functions. The improvement will be implemented consistent with San Jose's Better Bike Plan 2025.

Community Outreach Input and Relationship to DHAEs

Community input, as expressed by members of the Guadalupe/Washington Safety Committee and documented in the Washington Neighborhood Revitalization Plan, that is addressed includes the following:

- Pedestrian and bicycle safety
- Pedestrian dead zones
- Need for streetscape improvements

Because the HSR alignments cross adjacent to this community, residents of the Washington, Guadalupe, Tamien, and Alma/Almaden community would experience residual visual quality DHAEs. This improvement will provide related improvements to enhance visual quality. It will also provide general improvements in the form of improved safety, enhanced connectivity, enhanced livability, and community cohesion for residents in the Washington, Guadalupe, Tamien, and Alma/Almaden community.

Improvement Cost Estimate

New crosswalks, bicycle sharrows, bicycle signage, and trees on Goodyear Street, Humboldt Street, and Floyd Street are estimated to cost $515,000 in 2020 dollars.

These cost estimates are preliminary, as the SNI effort was done several years ago and improvements will need to be developed applying appropriate urban design guidelines from the City of San Jose, which may change the specific improvements proposed for the locations above. The improvements will be consistent with the City's Better Bike Plan 2025.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to the City of San Jose for the proposed improvement. The San Jose Department of Transportation is responsible for all streetscape design, maintenance, and improvements.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	10	This improvement will improve aesthetics and safety directly adjacent/nearby to the HSR alignment.
Relative Number of Beneficiaries	3	This improvement will benefit all residents adjacent to the HSR alignment.
Practicable	15	Funding for this improvement is practicable, and the improvements can be constructed.
Defined Project or Action	10	The improvements are defined but will require further design.
Satisfy Authority Obligations	15	The improvement will provide safety, accessibility, and connectivity improvements in communities affected by the HSR project.
Defined Roles and Responsibilities	15	The Authority will provide funding, and City of San Jose would provide design, maintenance, and improvements.
Evidence of Agreement	15	City supports these improvements.
Cost-Effectiveness	12	Cost is somewhat low relative to estimated number of beneficiaries.
TOTAL SCORE	95	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

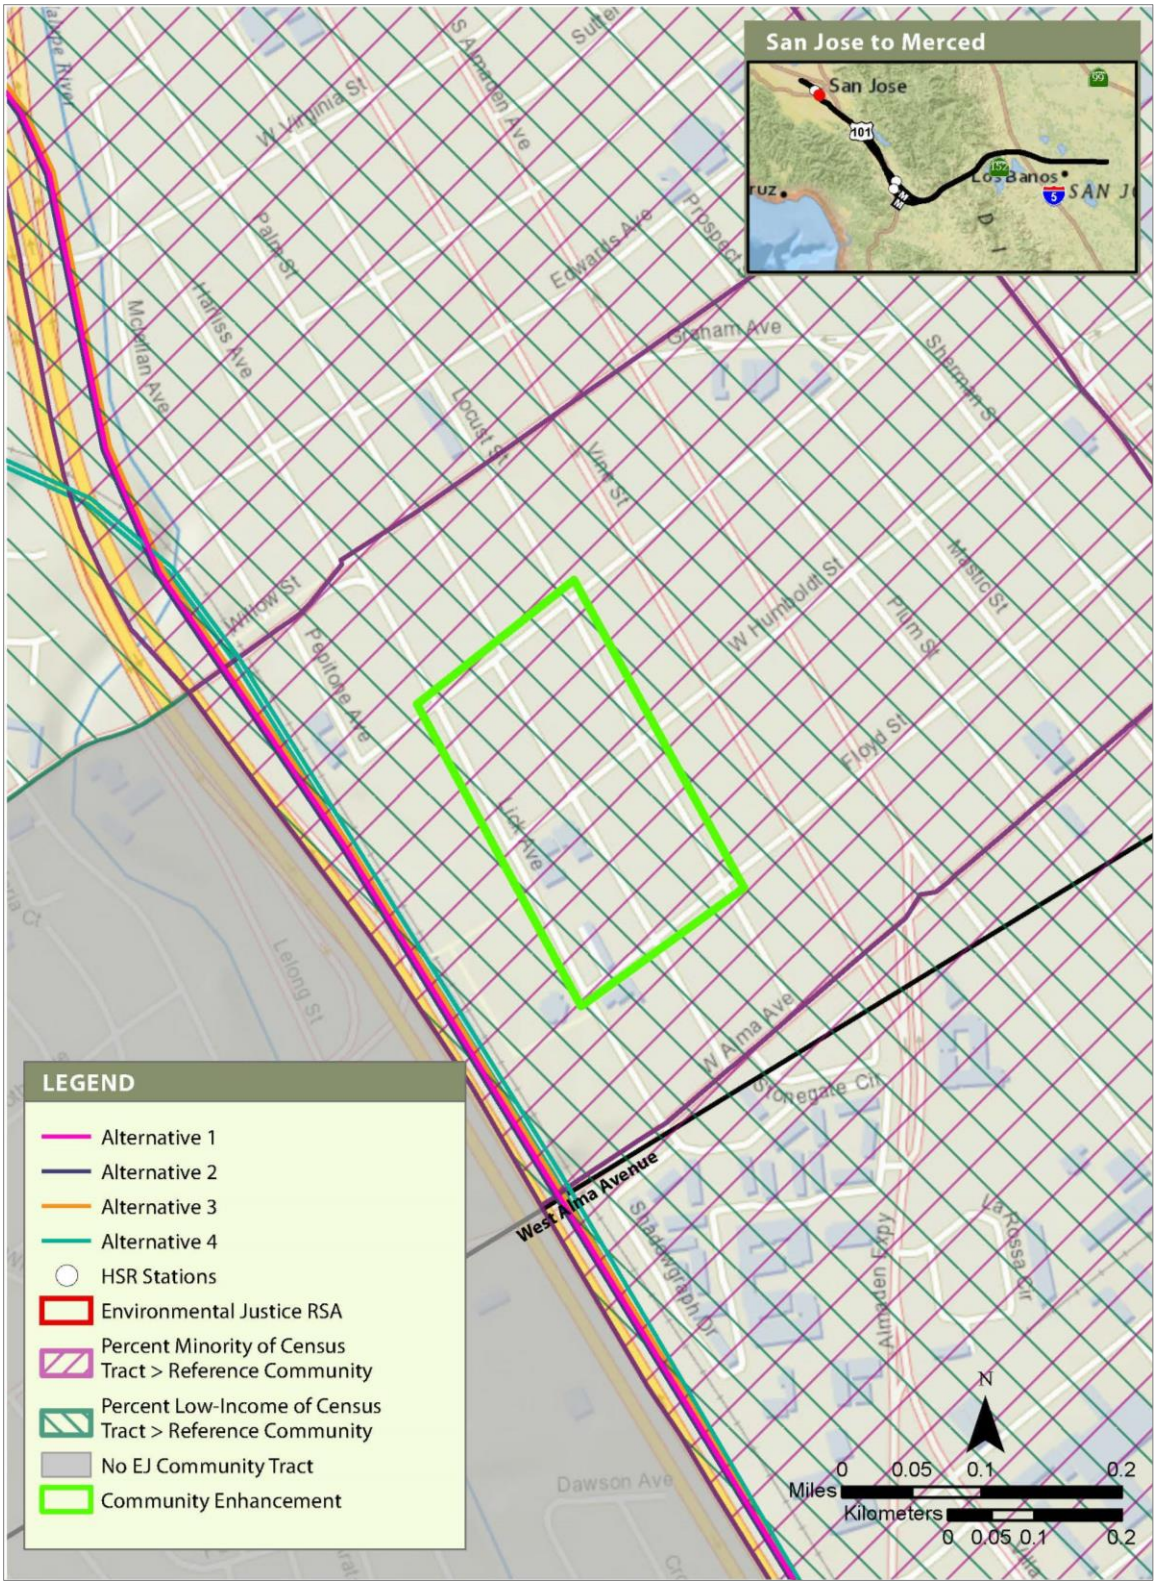

Figure WGTA-2 Streetscape Improvements (Goodyear, Humboldt, Floyd)
Washington/Guadalupe, Tamien, and Alma/Almaden

12. OFFSETTING MITIGATION MEASURE WGTA-OMM#3: NOISE TREATMENTS FOR RESIDENTIAL BUILDINGS ALONG SR 87 TO ADDRESS EXISTING NOISE

COMMUNITY: WASHINGTON/GUADALUPE, TAMIEN, AND ALMA/ALMADEN

ALTERNATIVE: 4

Measure Description

This improvement will provide funding for building insulation and window treatments for homes affected by existing freeway noise adjacent to State Route (SR) 87. The measure will consist of building and window insulation improvements for the homes along SR 87 from Interstate (I-) 280 to the Almaden Road overcrossing of SR 87.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAE) on low-income populations related to project-generated operational noise. There would be residual severe noise impacts within the Washington/Guadalupe, Tamien, and Alma/Almaden community after the application of project noise barrier mitigation and consideration of project benefits. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations. While the proposed improvement will not directly address operational noise effects resulting from the project, it will provide a related offset representing an investment in community noise reduction and will reduce noise levels in the same community affected by project noise.

Benefit to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment under all project alternatives would be adjacent to the Washington/Guadalupe, Tamien, and Alma/Almaden neighborhoods, where the percentage of minority residents and low-income residents is greater than that within the reference community. Minority populations and low-income populations are present throughout the community in the vicinity of the alignment. The proposed improvement will benefit the community's low-income community and minority community by providing noise reduction, health, and livability improvements (Figure WGTA-3).

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. Launched in July 2000, the Strong Neighborhoods Initiative (SNI) is a partnership between the San Jose City Council, Mayor, the Redevelopment Agency, residents, and business owners. The goal of SNI is to improve neighborhood conditions, enhance community safety, facilitate community services, and strengthen neighborhood associations. The SNI is funded through resources from the City of San Jose, San Jose Redevelopment Agency, grants, private investments, and public-private partnerships. Washington is 1 of 20 neighborhoods designated for the SNI. This neighborhood is an area of both low-income concentration and minority concentration that needs higher levels of investment to meet the needs of the community. The HSR alignment would pass along the western edge of the community.

The proposed improvement also will help achieve compliance with the indoor noise standards enforced through the City's General Plan policies.

Community Outreach Input and Relationship to DHAEs

Community input, as expressed by City of San Jose staff, that is addressed includes the following:

- Noise along I-280 and SR 87
- Increased traffic through neighborhood from cars traveling to and from downtown San Jose and SR 87

This improvement will provide for residential noise abatement adjacent to SR 87 from I-280 to the Almaden Road overcrossing of SR 87, resulting in health and livability improvements. Because the HSR alignment with Alternative 4 would travel adjacent to this community, these same residents would experience residual noise DHAEs under Alternative 4 after the application of project mitigation and consideration of project benefits.

Improvement Cost Estimate

There are approximately 59 single-family homes, 5 multifamily buildings, and 1 high-rise apartment building directly adjacent to the existing railroad alignment and SR 87 between I-280 and the Almaden Road overcrossing. Estimated costs are based on the average cost per property of the San Francisco International Airport noise abatement program (which is one of the largest in the country) of $12,632 per property for single-family homes, an assumed cost of $25,000 per multifamily building (for the side of units facing the railroad alignment only), and $75,000 for improvements to the side of the apartment building facing the railroad alignment only. Using these unit costs, the building and window insulation improvements for these homes would cost approximately $945,000.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to property owners to fund and implement this improvement and will fund the entire measure. A program implementer will need to be identified/developed to work with homeowners and building owners. The Authority will coordinate with City of San Jose regarding making homeowners aware of the program. The City would process any required encroachment and building permits needed for building upgrades.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Improvement will directly benefit minority populations and low-income populations in the community relatively close to all alternative alignments and Diridon Station and could substantially improve the indoor noise environment by reducing noise from the existing freeways.
Relative Number of Beneficiaries	3	Only the residents with noise treatments will benefit. This improvement will not benefit the entire community.
Practicable	15	Funding for this improvement is practicable. A program will need to be established to work with affected homeowners and building owners.
Defined Project or Action	10	Project is building insulation and window treatments. Exact criteria need to be developed.
Satisfy Authority Obligations	15	Improvement will provide community uplift. HSR project would result in noise effects, so there is a general nexus.
Defined Roles and Responsibilities	5	Authority will fund noise treatments. Program implementer needs to be identified. Caltrans would be consulted as needed.
Evidence of Agreement	15	City supports addressing noise.
Cost-Effectiveness	3	Cost is high relative to estimated number of beneficiaries.
TOTAL SCORE	81	

Authority = California High-Speed Rail Authority; Caltrans = California Department of Transportation; HSR = high-speed rail.

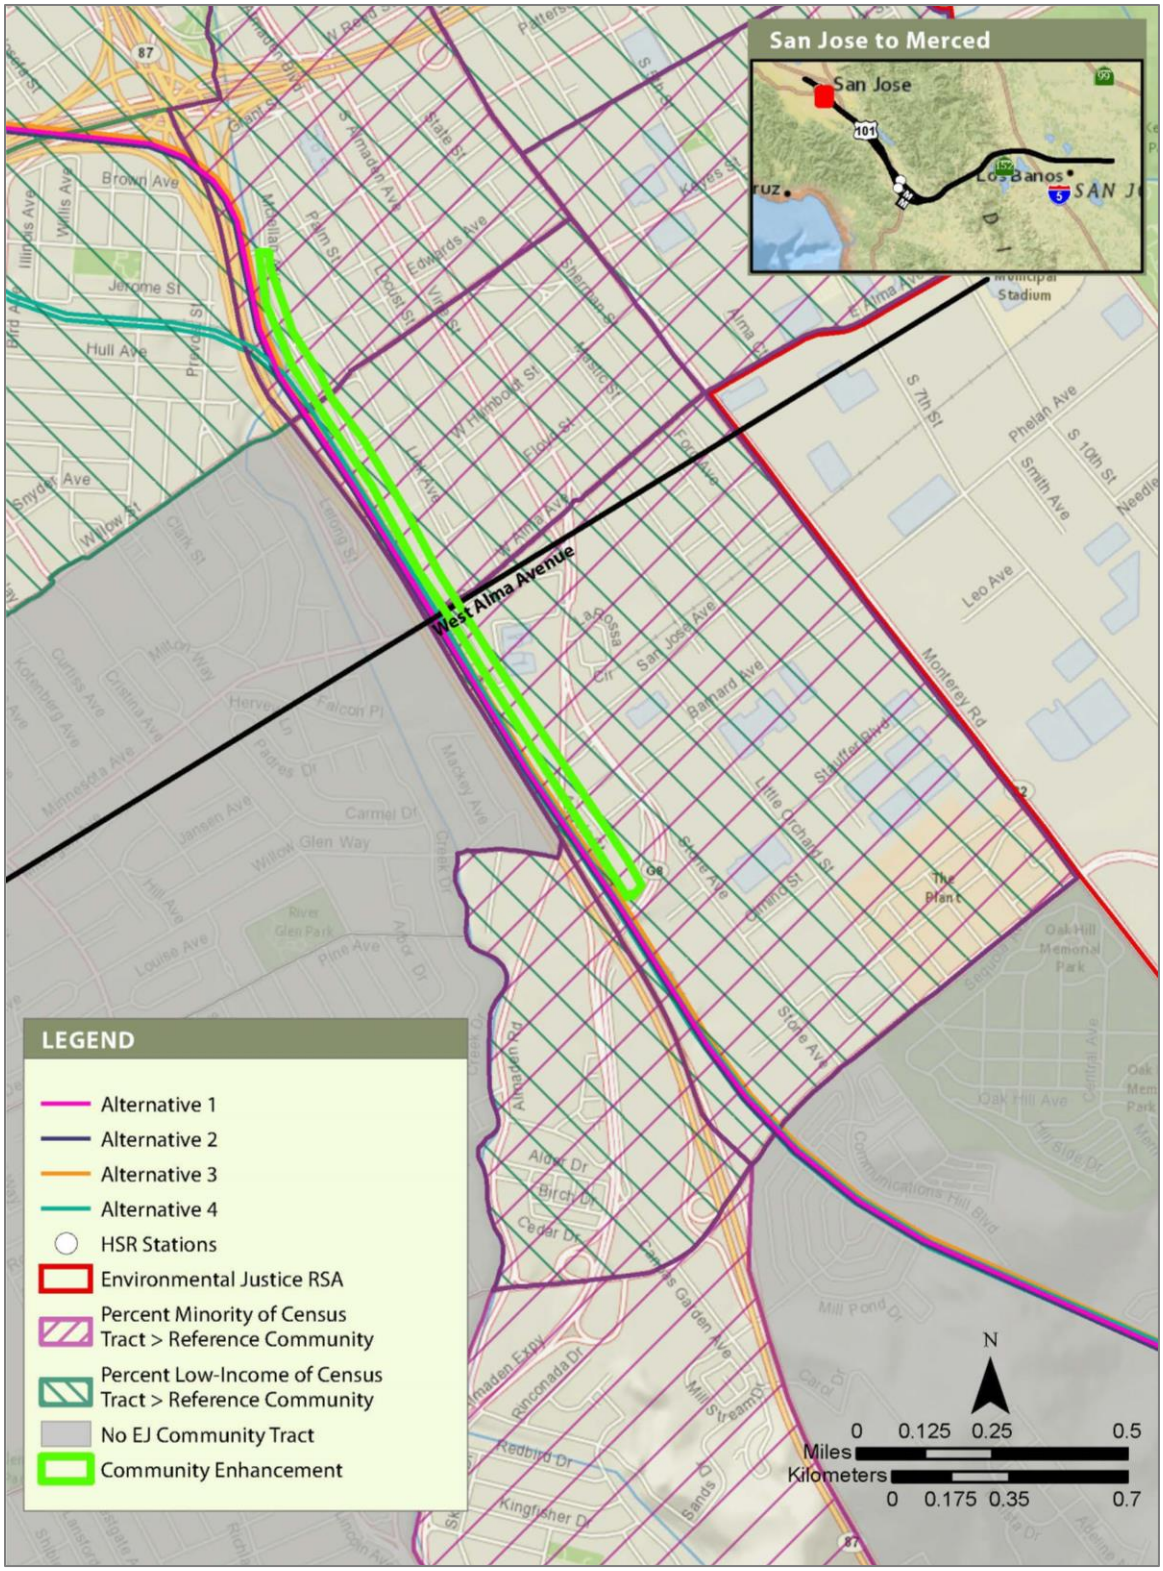

Figure WGTA-3 Noise Treatments for Residential Buildings Along SR 87 to Address Existing Noise
Washington/Guadalupe, Tamien, and Alma/Almaden

13. OFFSETTING MITIGATION MEASURE WGTA-OMM#4: ROCKETSHIP MATEO SHEEDY PUBLIC ADDRESS SYSTEM UPGRADE

COMMUNITY: WASHINGTON/GUADALUPE, TAMIEN, AND ALMA/ALMADEN

ALTERNATIVE: 4

Measure Description

The proposed improvement will include upgrade of the existing public address (PA) system within the school to help overcome disturbance from outside noise including airplane noise.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionately high and adverse effects (DHAE) on low-income populations related to project-generated operational noise. There would be residual severe noise impacts within the Washington/Guadalupe, Tamien, and Almaden/Alma community after the application of project mitigation and consideration of project benefits. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations to residences along State Route (SR) 87. The school itself would not have adverse effects due to high-speed rail (HSR) train noise. While the proposed improvement will not directly address operational noise effects resulting from the project, it will offset existing noise effects on the school (from existing freeways and airplane noise) by providing a more effective mechanism for making amplified announcements within the school.

Benefit to Minority Populations and Low-Income Populations

The HSR alignment would pass along the western edge of the Washington/Guadalupe, Tamien, and Alma/Almaden community, where the percentage of minority populations and low-income populations is greater than that within the reference community.

The proposed improvement will benefit the community's minority residents and low-income residents by providing a PA system that will enhance communication within the school facility by helping to overcome acoustical challenges related to existing external competing noise (Figure WGTA-4).

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. Launched in July 2000, the Strong Neighborhoods Initiative (SNI) was a partnership between the San Jose City Council, Mayor, the Redevelopment Agency, residents, and business owners. The goal of SNI was to improve neighborhood conditions, enhance community safety, facilitate community services, and strengthen neighborhood associations. The SNI was funded through resources from the City of San Jose, San Jose Redevelopment Agency, grants, private investments, and public-private partnerships. The Washington neighborhood was 1 of 20 neighborhoods designated for the SNI.

The proposed improvement will promote a better learning environment for students and an improved teaching environment for faculty at Rocketship Mateo Sheedy Elementary School, which serves adjacent low- and moderate-income neighborhoods.

Community Outreach Input and Relationship to DHAEs

Community input, as expressed by Rocketship Mateo Sheedy Elementary School staff, that is addressed includes the following:

- Improved school experience is needed both during and after school hours.
- Concerns about noise during project construction and increased traffic noise during operation.

The project would not result in substantial noise effects on the school itself but would affect residences along the Caltrain Corridor. This improvement will improve the learning environment at the school by counteracting existing external noise. Because the HSR alignment would travel adjacent to this community under Alternative 4, residents of the Washington/Guadalupe, Tamien, and Alma/Almaden community would experience residual noise DHAEs. This improvement will provide a related improvement to address noise.

Improvement Cost Estimate

The estimated cost for a new PA system is $100,000 to $200,000.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will fund this improvement, which would be implemented by Rocketship Sheedy Mateo Elementary School.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This improvement will provide educational benefits to students and faculty.
Relative Number of Beneficiaries	6	This improvement will provide educational benefits to students and faculty from the community but not to the community as a whole.
Practicable	15	The improvements can be funded and implemented.
Defined Project or Action	10	The general character of improvements is identified but needs to be defined further.
Satisfy Authority Obligations	15	Improvement will provide benefits to students and faculty from a community adjacent to HSR alignments.
Defined Roles and Responsibilities	15	Authority will fund. Rocketship would implement.
Evidence of Agreement	15	Rocketship would accept funding.
Cost-Effectiveness	15	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	106	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

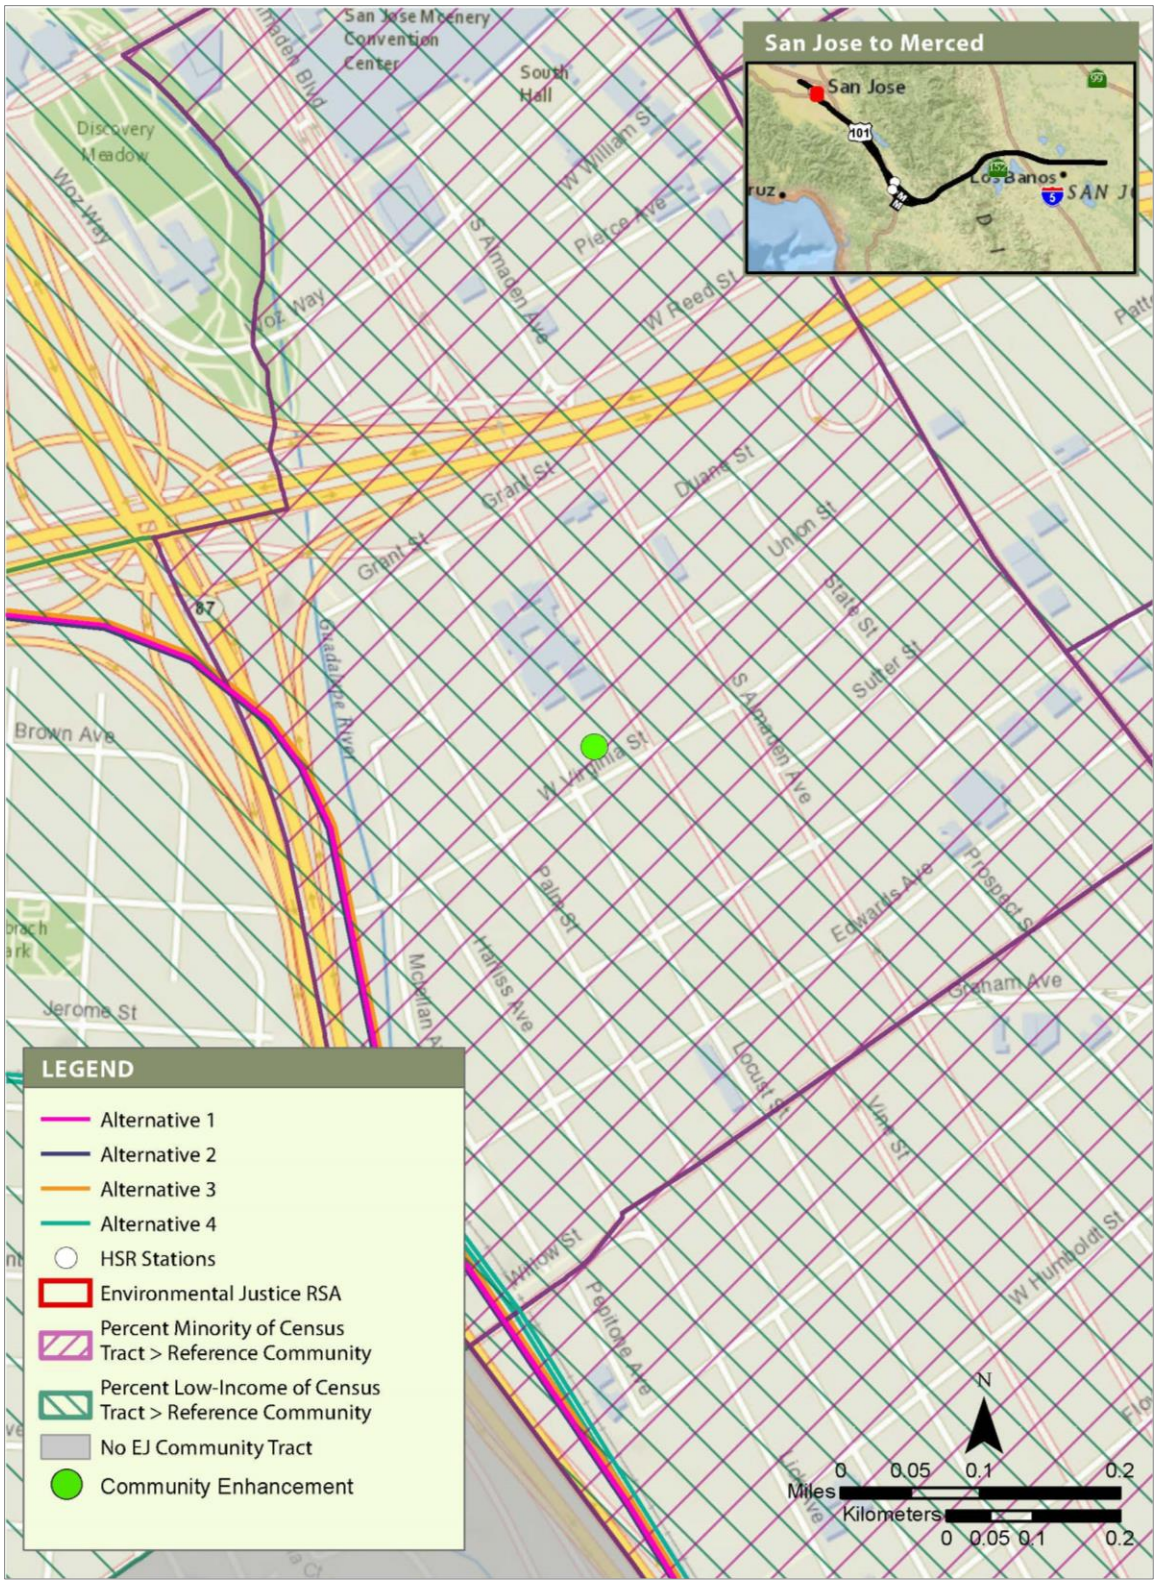

Figure WGTA-4 Rocketship Mateo Sheedy Elementary Public Address System Upgrade Washington/Guadalupe, Tamien, and Alma/Almaden

14. OFFSETTING MITIGATION MEASURE WGTA-OMM#5: TAMIEN PARK BALLFIELD NETTING

COMMUNITY: WASHINGTON/GUADALUPE, TAMIEN, AND ALMA/ALMADEN

ALTERNATIVES: 1, 2, 3, 4

Measure Description

This measure will consist of sports field ball netting along the west side of the existing park to reduce the chance of soccer balls, basketballs or other field sports balls landing in the active railroad right of way to the west of the park. This will reduce the potential for individuals to enter the railroad right of way to retrieve lost balls. The netting will be installed on the park property and not within the railroad right of way.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionately high and adverse effects (DHAE) on low-income populations related to project-generated operational noise. There would be residual severe noise impacts within the Washington/Guadalupe, Tamien, and Alma/Almaden community after the application of project mitigation and consideration of project benefits. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations. Additionally, under Alternatives 1, 2, and 3, the project would result in DHAEs related to visual quality associated with the aerial alignment of the project through this community. While the proposed improvement will not directly address operational noise or aesthetics effects resulting from the project, it will address an identified community need.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment would pass along the western edge of the Washington/Guadalupe, Tamien, and Alma/Almaden community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The proposed improvement will benefit the community's minority residents and low-income residents by providing enhanced recreational opportunities, safety, and opportunities for health benefits for Tamien Park users (Figure WGTA-5).

Consistency with Community Goals and Planning

The proposed improvement is consistent with the following Tamien Specific Plan policies:

- Provide park, recreation, and trail facilities to serve the residents of the Tamien Station Area
- Identify park needs to determine how to best meet these needs

Community Outreach Input and Relationship to DHAEs

Community input, as expressed by City of San Jose Parks and Recreation staff and members of the Guadalupe/Washington Safety Committee, that is addressed includes the following:

- Need for expanded/improved parks
- Neglect
- Homelessness
- Safety

This improvement will provide for improved recreational safety for residents utilizing Tamien Park.

Improvement Cost Estimate

The improvement will include new ball netting along the multi-sports field and along the basketball courts. The length of the netting is assumed to be up to 250 feet (180 feet for the multi-sports field and 70 feet for the basketball courts) and up to 30 feet high. Net costs are assumed to be up to $3.20/linear foot for the net for an estimated cost of up to $16,000.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to the City of San Jose for the proposed improvement. The City of San Jose would install and maintain the netting.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This park serves the community directly adjacent to the HSR alignment, and the improvement will increase safety for park users.
Relative Number of Beneficiaries	9	This improvement will primarily benefit those who participate in active sports at the park (like soccer, basketball, and frisbee).
Practicable	15	Funding for this improvement is practicable, as is construction.
Defined Project or Action	15	The improvement is fully defined.
Satisfy Authority Obligations	15	Improvement will provide safety and recreation benefits to a community directly along the HSR alignment.
Defined Roles and Responsibilities	15	Authority will fund. The city of San Jose would install and maintain the netting.
Evidence of Agreement	15	City agrees.
Cost-Effectiveness	15	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	114	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

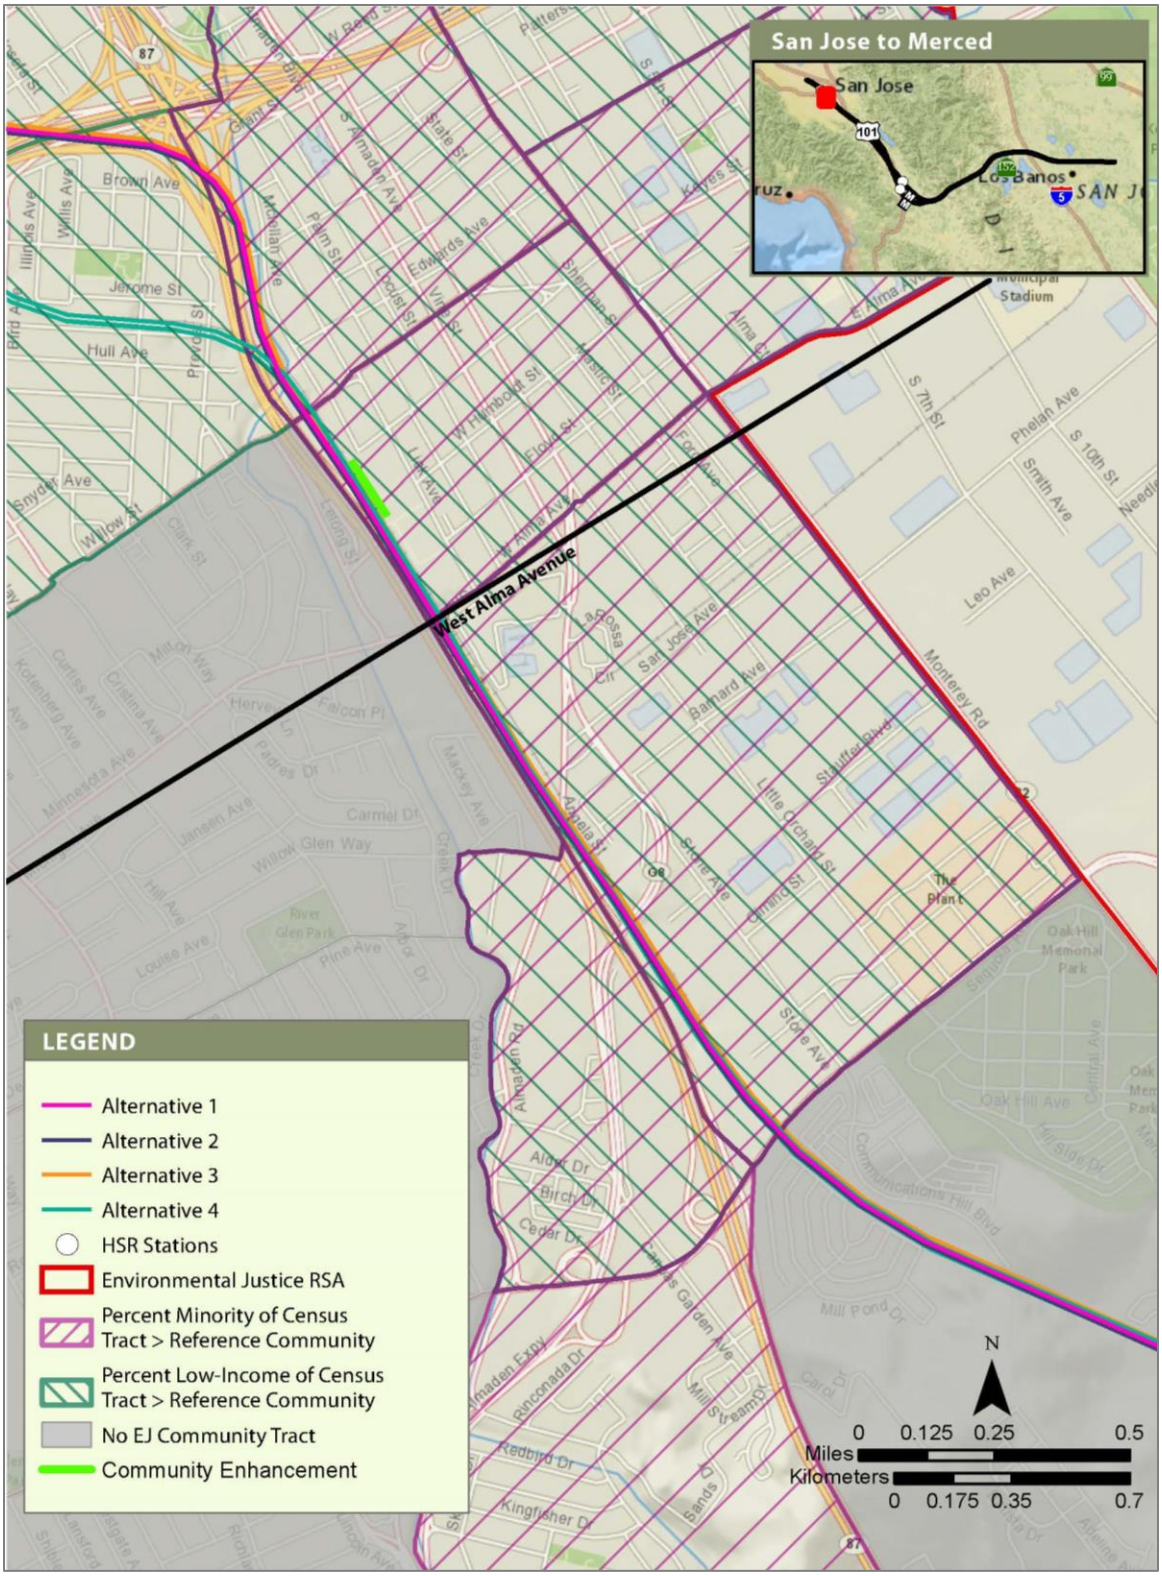

Figure WGTA-5 Tamien Park Field Netting
Washington/Guadalupe, Tamien, and Alma/Almaden

15. OFFSETTING MITIGATION MEASURE SSJ-OMM#1: MONTEREY ROAD GRAND BOULEVARD LANDSCAPING IMPROVEMENTS

COMMUNITY: SOUTH SAN JOSE

ALTERNATIVES: 1, 2, 3

Measure Description

The proposed improvement will include landscaping improvements on Monterey Road. The scope of the improvement will be clarified in consultation with the City of San Jose and will be designed consistent with the City's Complete Streets Design Standards.

Nexus to Disproportionately High and Adverse Effects

Under Alternatives 1, 2, and 3, the project would result in disproportionate, high, and adverse effects (DHAE) on minority populations and low-income populations related to the visual effects of project operation. There would be residual severe visual impacts within the South San Jose community after the application of project mitigation and consideration of project benefits. DHAEs would be related to train operation, including spillover night lighting, lighting from nighttime station operation, and areas of elevated alignments. While the proposed improvement will not directly address operational visual effects resulting from the project, it will provide a related offset representing an investment in visual quality within the community affected by the DHAEs.

Benefit to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment would traverse the South San Jose community, where the percentage of minority populations and low-income populations is greater than that within the reference community.

The proposed improvement will benefit the community's minority residents and low-income residents by providing aesthetic improvements. The location of the proposed improvement relative to the HSR alignment within the South San Jose community is shown in Figure SSJ-1.

Consistency with Community Goals and Planning

The proposed improvement is included in HSR's Connecting Communities Strategy for Monterey Corridor and Coyote Valley. The improvement also is consistent with the San José General Plan's vision of Monterey Road as a "Grand Boulevard" with the potential to contribute to the City's overall identity through cohesive design. As described in the General Plan, these Grand Boulevards play an important role in shaping the City's image for its residents, workers, and visitors because of their importance and location as major transportation routes, the land uses they support, and the potential to act as major urban design elements at a citywide scale. The Grand Boulevards require extra attention and improvement, including special measures within the public right-of-way, such as enhanced landscaping. Improvements will be designed and implemented consistent with the San Jose Complete Streets Design Standards and Guidelines.

Community Outreach Input and Relationship to Overall Project Effects

This improvement was included in HSR's Connecting Communities Strategy and identified as a need in the City General Plan. This improvement will provide aesthetics improvements benefitting community members utilizing Monterey Road. Because the HSR alignment would travel through

this community under Alternatives 1, 2, and 3, this community would experience the resulting residual aesthetic effects, and will benefit from this improvement.

Improvement Cost Estimate

A preliminary placeholder budget for potential landscaping improvements along Monterey Road Grand Boulevard is estimated at $4 million based on an assumed 10% of Grand Boulevard costs overall. This improvement includes planting and installation of irrigation but no ongoing maintenance costs.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding for planning studies and partial funding for implementation of proposed improvements. San Jose Department of Transportation would design, maintain, and implement improvements.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	10	Beneficial to minority populations and low-income populations and non-minority and low-income populations.
Relative Number of Beneficiaries	15	Beneficial to minority populations and low-income populations and non-minority and low-income populations.
Practicable	15	Improvements are expensive.
Defined Project or Action	10	Some limited design required.
Satisfy Authority Obligations	15	Helps to improve aesthetics in area of effects of aerial viaduct or elevated embankment with Alternatives 1,2 and 3.
Defined Roles and Responsibilities	15	Authority will provide funding and City will implement improvements.
Evidence of Agreement	15	Monterey Grand Blvd. is a priority for the City.
Cost-Effectiveness	15	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	110	

Authority = California High-Speed Rail Authority.

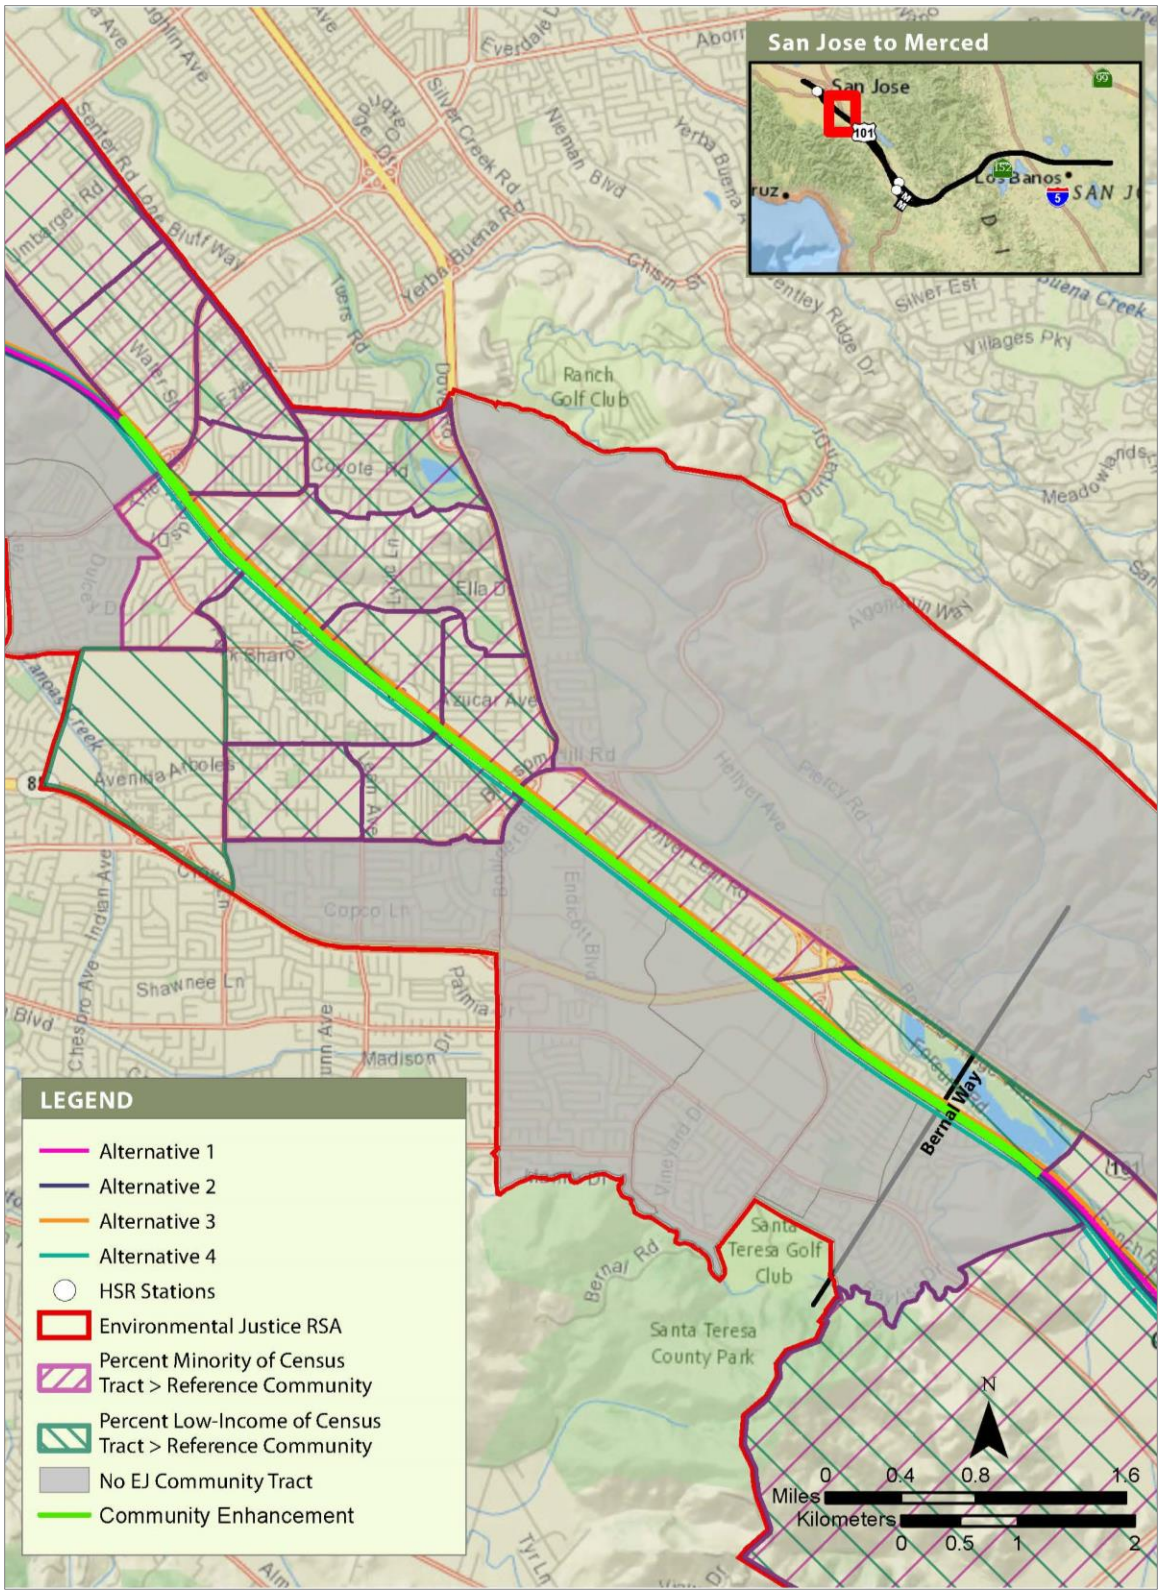

Figure SSJ-1 Monterey Road Grand Boulevard Landscaping Improvements South San Jose

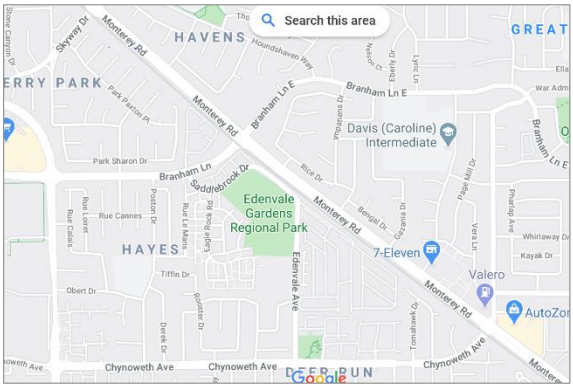
16. OFFSETTING MITIGATION MEASURE SSJ-OMM#2: MONTEREY ROAD PEDESTRIAN OVERCROSSINGS AT SKYWAY, BRANHAM, AND CHYNOWETH

COMMUNITY: SOUTH SAN JOSE

ALTERNATIVE: 4

Measure Description



The proposed improvement will include pedestrian overcrossings of Monterey Road at Skyway Drive, Branham Lane, and Chynoweth Avenue. The improvement will provide an east-west connection under Alternative 4, which will improve safety for students, pedestrians, and bicyclists.

The California High-Speed Rail Authority (Authority) will provide funding for these overcrossings, and the City of San Jose would implement. The City is considering potential grade separations of the railroad crossings at these three locations. If grade separations are realized, then the underlying residual safety effect related to emergency vehicle response times will be avoided. Consequently, if the City is advancing the grade separations toward completion by the time the high-speed rail (HSR) project would become operational (nominally 2031 based on the Authority's 2020 Revised Business Plan) or within several years of commencement of HSR service between San Jose and Gilroy, then, provided there is agreement of both the Authority and the City, the Authority could instead provide the equivalent funding that would have gone to the pedestrian overcrossings to fund the grade separation project(s).

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAE) on low-income populations related to emergency vehicle response delay related to increased gate-down time at Skyway Drive, Branham Lane, and Chynoweth Avenue. Under Alternative 4, there would be residual safety effects related to emergency vehicle response times after the application of project mitigation and consideration of project benefits. DHAEs would be related to safety conditions in the South San Jose community. While the proposed improvement will not directly address emergency response delay resulting from the project, it will provide a related safety offset with a nexus to the emergency response vehicle delay DHAE in the same community where effects would occur. If the Authority provided funds to help realize grade separations, as described above, that would directly help to address emergency response delays.

Benefit to Minority Populations and/or Low-Income Populations

The HSR alignment would traverse the South San Jose community, where the percentage of minority populations and low-income populations is greater than that within the reference community.

The proposed improvement will benefit the community's low-income residents by providing traffic/transportation, safety, connectivity, and community cohesion improvements in an area where there are safety concerns related to at-grade crossings. The location of the proposed improvement relative to the location of HSR alignment within the South San Jose community is shown in Figure SSJ-2.

Consistency with Community Goals and Planning

The improvement will be consistent with the San José General Plan's vision of Monterey Road as a "Grand Boulevard" with the potential to contribute to the City's overall identity through cohesive design. As described in the General Plan, these Grand Boulevards play an important role in shaping the City's image for its residents, workers, and visitors because of their importance and location as major transportation routes, the land uses they support, and the potential to act as major urban design elements at a citywide scale. The Grand Boulevards require extra attention and improvement, including special measures within the public right-of-way, such as enhanced landscaping, additional attractive lighting, wider and comfortable sidewalks, and identification banners.

Community Outreach Input and Relationship to DHAEs

Community input, as expressed by Eastside Union High School District staff, that is addressed includes the following:

- Pedestrian safety
- Need for additional pedestrian bridges

Additionally, the City of San Jose has indicated that while it does not support at-grade crossings along the HSR project alignment, the grade separation of the entire cross streets is a superior alternative to separate pedestrian overcrossings.

This improvement will provide for enhanced safety and connectivity for residents in this area. The HSR alignment would traverse through this community under all project alternatives; however residual emergency vehicle response DHAEs after application of project mitigation and consideration of project benefits will only occur with Alternative 4. Therefore, this improvement will apply only under Alternative 4.

Improvement Cost Estimate

The three overcrossings under Alternative 4 are estimated to cost $36.4 million.

Roles and Responsibilities

The Authority will provide funding for this improvement; the City of San Jose would design, maintain, and implement the improvements. As noted above, under certain conditions, the Authority could provide this funding toward the realization of City desire to grade separate the subject crossings.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Beneficial to bicycle-riding and walking minority populations and low-income populations.
Relative Number of Beneficiaries	12	Beneficial to bicycle-riding and walking minority populations and low-income populations; this is in the middle of minority populations/low-income populations.
Practicable	15	Improvements are expensive but practicable.
Defined Project or Action	15	Design is mostly completed.
Satisfy Authority Obligations	15	Transit mobility improvements, safety, connectivity.

Defined Roles and Responsibilities	15	Authority will provide funding and Caltrain, UPRR, and the City of San Jose would collaborate on implementing improvements.
Evidence of Agreement	0	City supports pedestrian/bicycle crossings over busy roadways and railroads in general but would strongly prefer grade separations for vehicles as well.
Cost-Effectiveness	9	Cost is somewhat high relative to estimated number of beneficiaries.
TOTAL SCORE	96	

Authority = California High-Speed Rail Authority; UPRR = Union Pacific Railroad.

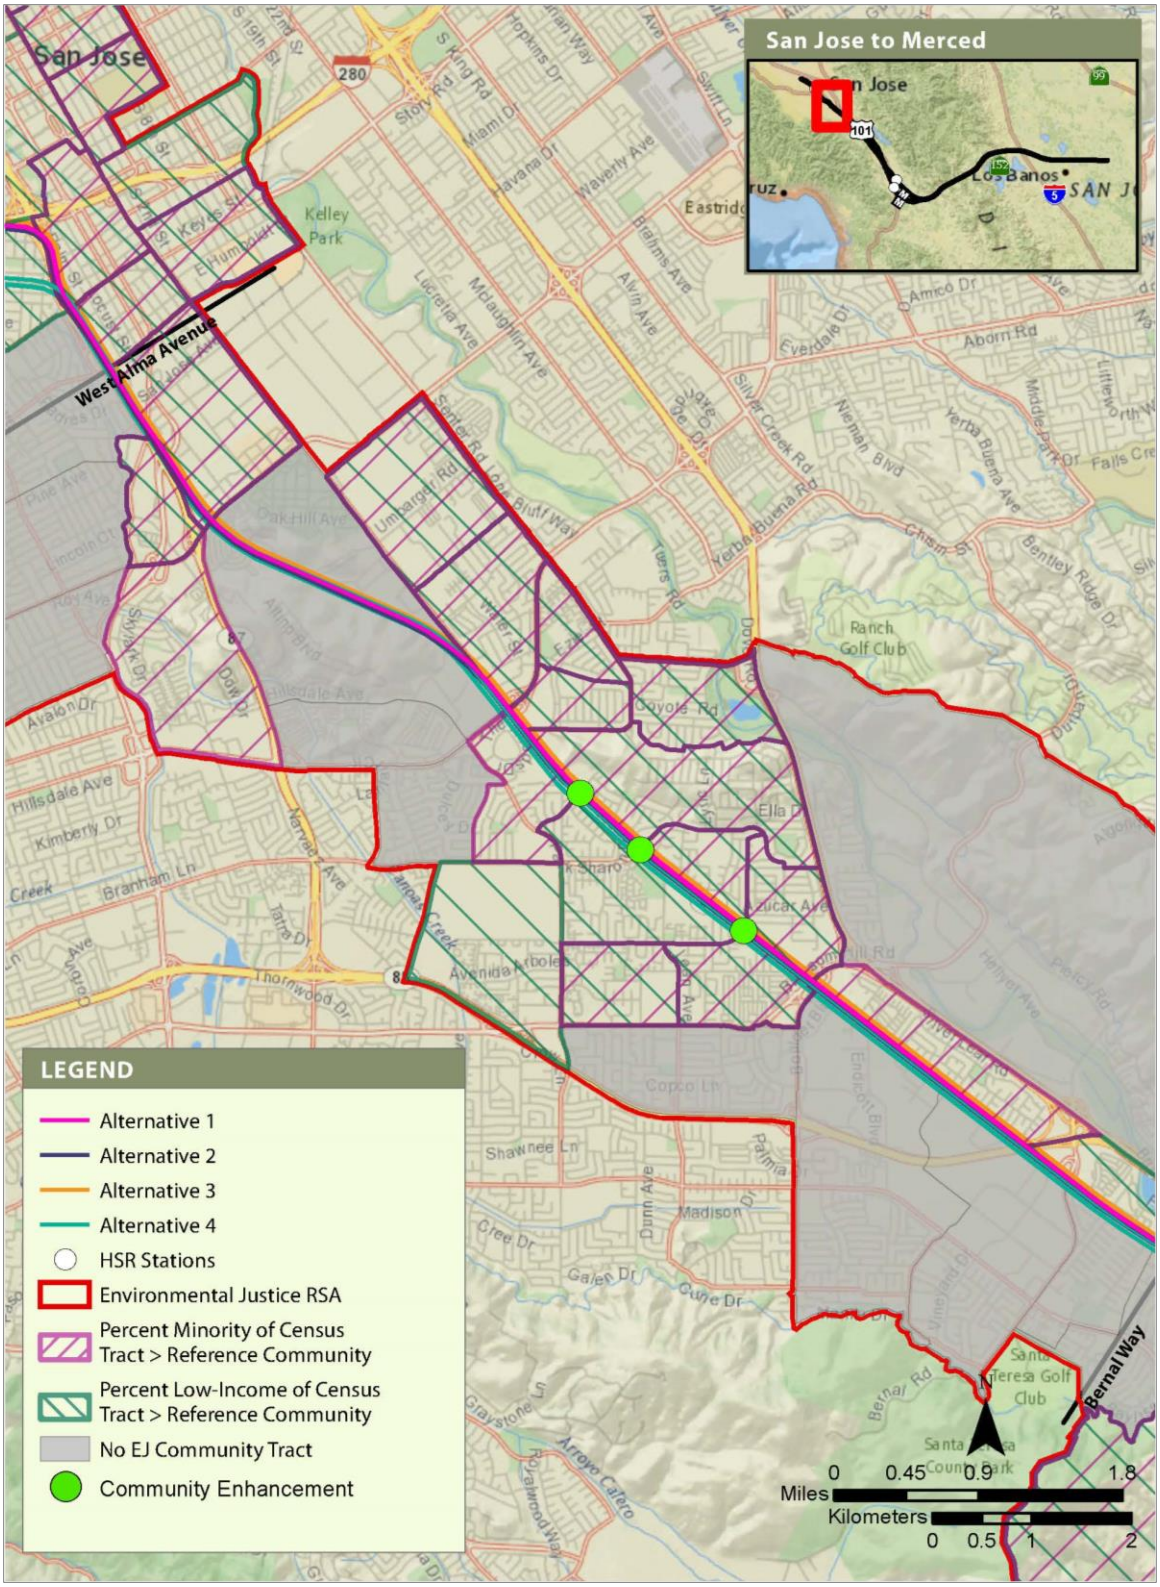


Figure SSJ-2 Monterey Road Pedestrian Overcrossings at Skyway, Branham, and Chynoweth
South San Jose

17. OFFSETTING MITIGATION MEASURE SSJ-OMM#3: NOISE TREATMENTS FOR RESIDENTIAL BUILDINGS ALONG US 101 TO ADDRESS EXISTING NOISE

COMMUNITY: SOUTH SAN JOSE

ALTERNATIVE: 4

Measure Description

Alternative 4 would result in a total of 20 severe noise impacts with noise barrier mitigation and 8 severe noise impacts with noise barrier mitigation with implementation of quiet zones (if the City of San Jose decides to implement them in South San Jose). This proposed offsetting mitigation measure will upgrade existing residential structures to improve noise attenuation along certain portions of U.S. Highway (US) 101in areas with low-income populations greater than the reference community to promote a healthier community and improve the quality of life in the neighborhood and to offset the residual severe noise impacts in the low-income areas of the community affected by Alternative 4. This measure will apply to up to 20 residential units along the west side of US 101 from Blossom Hill Road to SR 85, including the southbound exit ramp to SR 85.

Noise barriers already exist in most of these residential areas adjacent to US 101. These barriers have been built as part of roadway improvement projects for noise abatement purposes and provide acoustical shielding at outdoor use areas and at ground-level facades of buildings. Accordingly, the proposed offsetting mitigation measure will instead focus on addressing indoor noise level through retrofitting up to 20 homes with noise reduction features, including upgraded windows and insulation.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAEs) on low-income populations related to the project's operational noise impacts after the consideration of mitigation and project benefits. Alternative 4 would extend through South San Jose where there would be up to 20 residual severe noise impacts after the application of proposed noise barrier mitigation. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations. While the proposed improvement will not directly address operational noise effects resulting from the project, it will provide a related offset representing an investment in community noise reduction at sensitive receptors that already experience traffic noise from US 101. The improvement will reduce noise levels in the same community affected by project noise.

Benefit to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment would traverse the South San Jose community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The proposed offsetting mitigation measure will benefit the community's minority populations and low-income populations by providing health and livability improvements under Alternative 4 (Figure SSJ-3).

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following goals and policies from the *Envision San Jose 2040 General Plan:*

- Goal EC-1, Community Noise Levels and Land Use Compatibility. Minimize the impact of noise on people through noise reduction and suppression techniques, and through appropriate land use policies.

- Policy H-1.1, Through the development of new housing and the preservation and rehabilitation of existing housing, facilitate the creation of economically, culturally, and demographically diverse and integrated communities.
- Policy H-3.4, Promote the conservation and rehabilitation of existing viable housing stock.
- Policy H-3.5, Prioritize housing resources to assist those groups most in need, or to those geographic locations in the City that most require investment in order to improve neighborhood blight conditions.

Community Outreach Input and Relationship to DHAEs

Noise was raised as a key concern of residents in San Jose. Community input provided by the City of San Jose indicated the need to address noise impacts.

This improvement will improve the health and quality of life for South San Jose residents in targeted areas. Because the HSR alignment would travel through South San Jose where there would be residual severe noise impacts after the application of proposed noise barrier mitigation under Alternative 4, this improvement will apply under Alternative 4.

Improvement Cost Estimate

The cost of retrofitting individual homes is based on an estimated $12,632 per single-family home and $25,000 per multifamily building. Assuming up to 20 total units, this would result in an estimated retrofit cost of $253,000 to $500,000.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to property owners to fund and implement this improvement and will fund the entire measure. A program implementer will need to be identified/developed to work with homeowners and building owners. The Authority will coordinate with the City of San Jose regarding making homeowners aware of the program. The City would process any required encroachment and building permits needed for building upgrades.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Improvement will directly benefit minority populations and low-income populations in the community relatively close to all alternative alignments and Diridon Station and could substantially improve the indoor noise environment by reducing noise from the existing freeways.
Relative Number of Beneficiaries	3	Only the residents with noise treatments will benefit. This improvement will not benefit the entire community.
Practicable	15	Funding for this improvement is practicable. A program will need to be established to work with affected homeowners and building owners.
Defined Project or Action	10	Project is building insulation and window treatments. Exact criteria need to be developed.
Satisfy Authority Obligations	15	Improvement will provide community uplift. HSR project would result in noise effects, so there is a general nexus.
Defined Roles and Responsibilities	5	Authority will fund noise treatments. Program implementer needs to be identified. Caltrans would be consulted as needed.
Evidence of Agreement	15	City supports addressing noise effects.
Cost-Effectiveness	3	Cost is high relative to estimated number of beneficiaries.
TOTAL SCORE	81	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

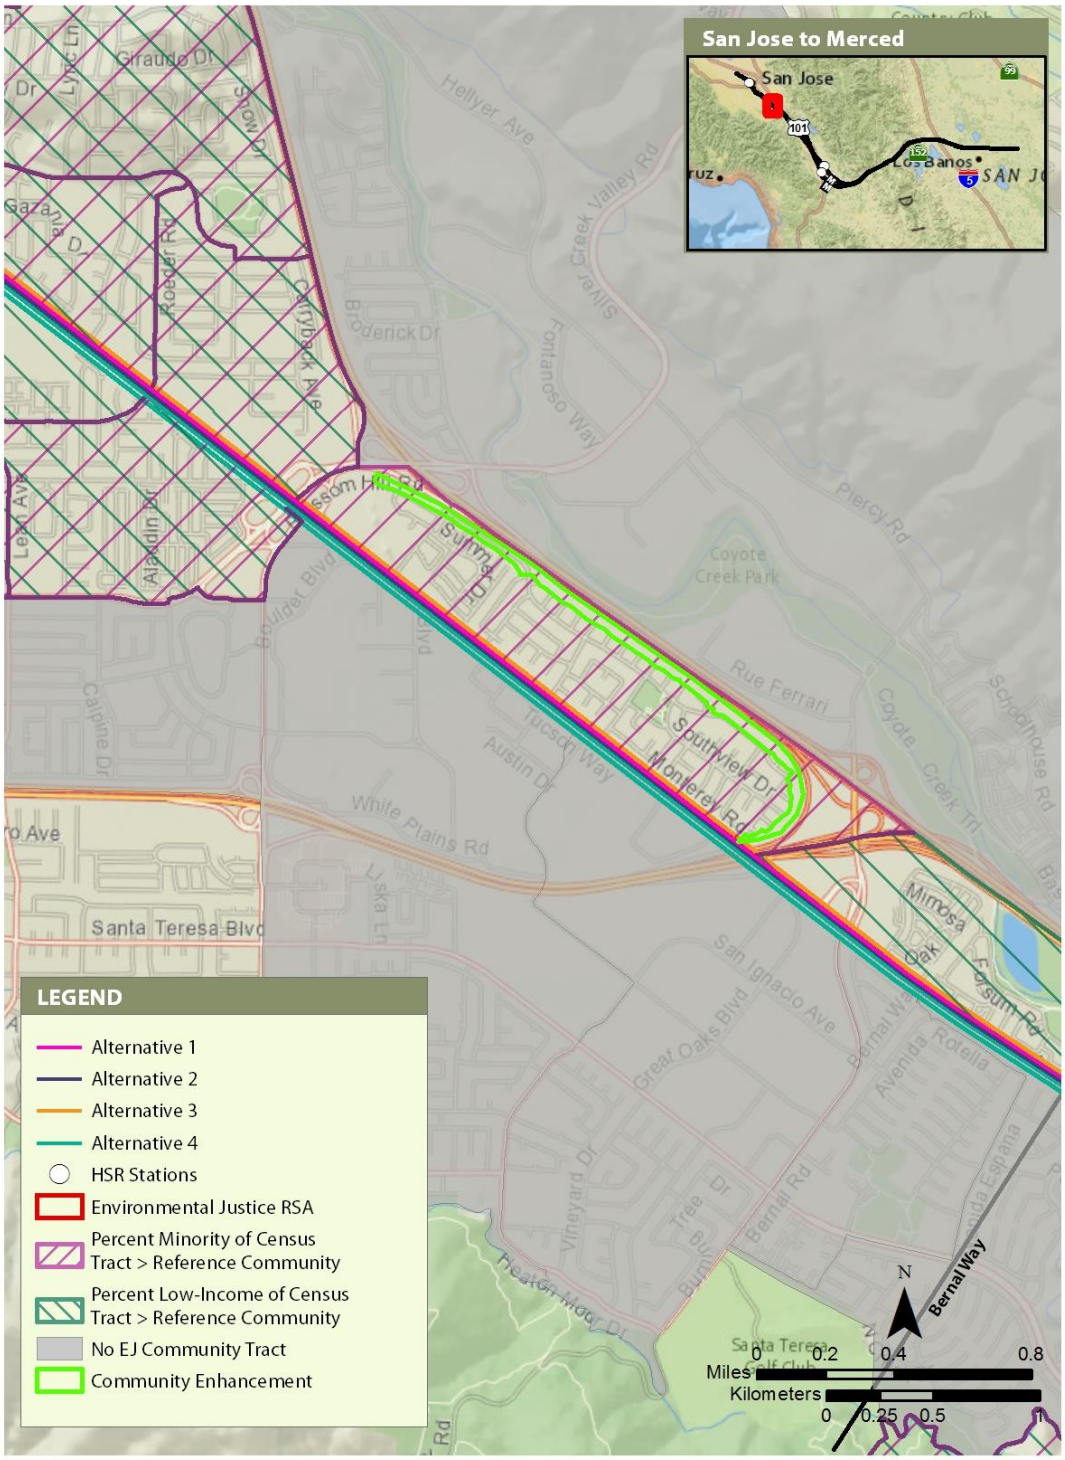

Figure SSJ-3 Noise Treatments for Residential Properties Along US 101 to Address Existing Noise, South San Jose

18. OFFSETTING MITIGATION MEASURE SSJ-OMM#4: (CAROLINE) DAVIS INTERMEDIATE SCHOOL ALL-WEATHER TURF AND TRACK

COMMUNITY: SOUTH SAN JOSE

ALTERNATIVES: 1, 2, 3, 4

Measure Description

The proposed improvement will include upgrade of an existing natural turf to an all-weather turf and all-weather track at (Caroline) Davis Intermediate School. This will ensure year-round use for students, the community, and for sporting activities. This could include light standards, goal posts, striping, seating, turf, and track. Other improvements are being constructed as Davis Intermediate serves local schools and provides after-school services as well as community recreational opportunities.

Nexus to Disproportionately High and Adverse Effects

Under Alternatives 1, 2, and 3, the project would result in disproportionately high and adverse effects (DHAE) on minority populations and low-income populations related to the visual effects of project operation. There would be residual severe visual impacts within the South San Jose community after the application of project mitigation and consideration of project benefits. DHAEs would be related to train operation, including spillover night lighting, lighting from nighttime station operation, and areas of elevated alignments. Additionally, under Alternative 4, the project would result in DHAEs on low-income populations related to emergency vehicle response delay and noise. DHAEs would be related to noise, aesthetics, and safety conditions in the South San Jose community.

While the proposed improvement will not directly address operational visual effects, operational noise, or emergency response delay resulting from the project alternatives, it will provide a benefit to minority residents and low-income residents in this community by responding to a community need for recreational opportunities in the area for students as well as the community at large.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment would traverse the South San Jose community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The proposed improvement will benefit the community's minority residents and low-income residents by providing recreation improvements to enhance community health and well-being (Figure SSJ-4). The Edenvale Roundtable community suffers from a significant lack of access to health services as well as after-school and weekend recreational centers where it is safe for students, young adults, and community members to have access to recreational activities or organized sports. Upgrades to the all-weather field and track are part of a comprehensive upgrade to the school to provide community service facilities to the community that will allow the school to program activities in the after-hours and weekends.

Consistency with Community Goals and Planning

The improvement will provide recreational improvements at Caroline Davis Intermediate School. The proposed improvement will be consistent with the following City of San José General Plan goals and policies:

- Goal PR-3 – Provide an Equitable Park System. Create a balanced park system that provides all residents access to parks, trails, open space, community centers, dog parks, skate parks, aquatics facilities, sports fields, community gardens, and other amenities.

- PR-8.7 Actively collaborate with school districts, utilities, and other public agencies to provide for appropriate recreation uses of their respective properties and rights-of-ways. Consideration should be given to cooperative efforts between these entities and the City to develop parks, pedestrian and bicycle trails, sports fields and recreation facilities.
- PR-8.8 Collaborate with the public land agencies and other appropriate jurisdictions to direct the expenditure of their funds to provide parks and other open space lands and recreation resources within, or in close proximity to, the urban population.
- PR-8.9 Work cooperatively with local school districts in identifying and evaluating surplus school sites for potential parkland acquisition.
- PR-8.10 Encourage the development of private/commercial recreation facilities that are open to the public to help meet existing and future demands (i.e., plazas, swimming pools, fitness centers and gardens).

Community Outreach Input and Relationship to DHAEs

Community input, as expressed by the Oak Grove School District Superintendent, that is addressed includes the following:

- Significant lack of access to after-school and weekend recreational centers where it is safe for students, young adults, and community to have access to recreational activities or organized sports
- Davis Intermediate serves three of the impacted elementary school communities and is also one of the schools identified for high impact.

This improvement will provide for enhanced recreational opportunities for Caroline Davis Intermediate School students and for two additional school communities, as well as additional open space for the larger community.

Improvement Cost Estimate

Upgrade of the existing natural turf field to all-weather turf field and all-weather track is estimated at $1,250,000. This will include replacing the turf and resurfacing the track.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to the Oak Grove School District for the proposed improvement.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Health and wellness benefits to surrounding minority population and low-income population and community, especially schoolchildren and particularly with no COVID-19 restrictions.
Relative Number of Beneficiaries	6	Located within minority community and low-income community and serves surrounding minority communities and low-income communities.
Practicable	15	Benefit complements existing funding by recipient.

Defined Project or Action	15	Improvement is designed and will provide wraparound service for existing investments.
Satisfy Authority Obligations	15	Provides park and community space for minority population and low-income population at affected school and two additional school communities, approximately 2,000 schoolchildren.
Defined Roles and Responsibilities	15	Authority will provide funding, and Oak Grove School District would implement.
Evidence of Agreement	15	Oak Grove School District is in strong support.
Cost-Effectiveness	12	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	108	

Authority = California High-Speed Rail Authority.

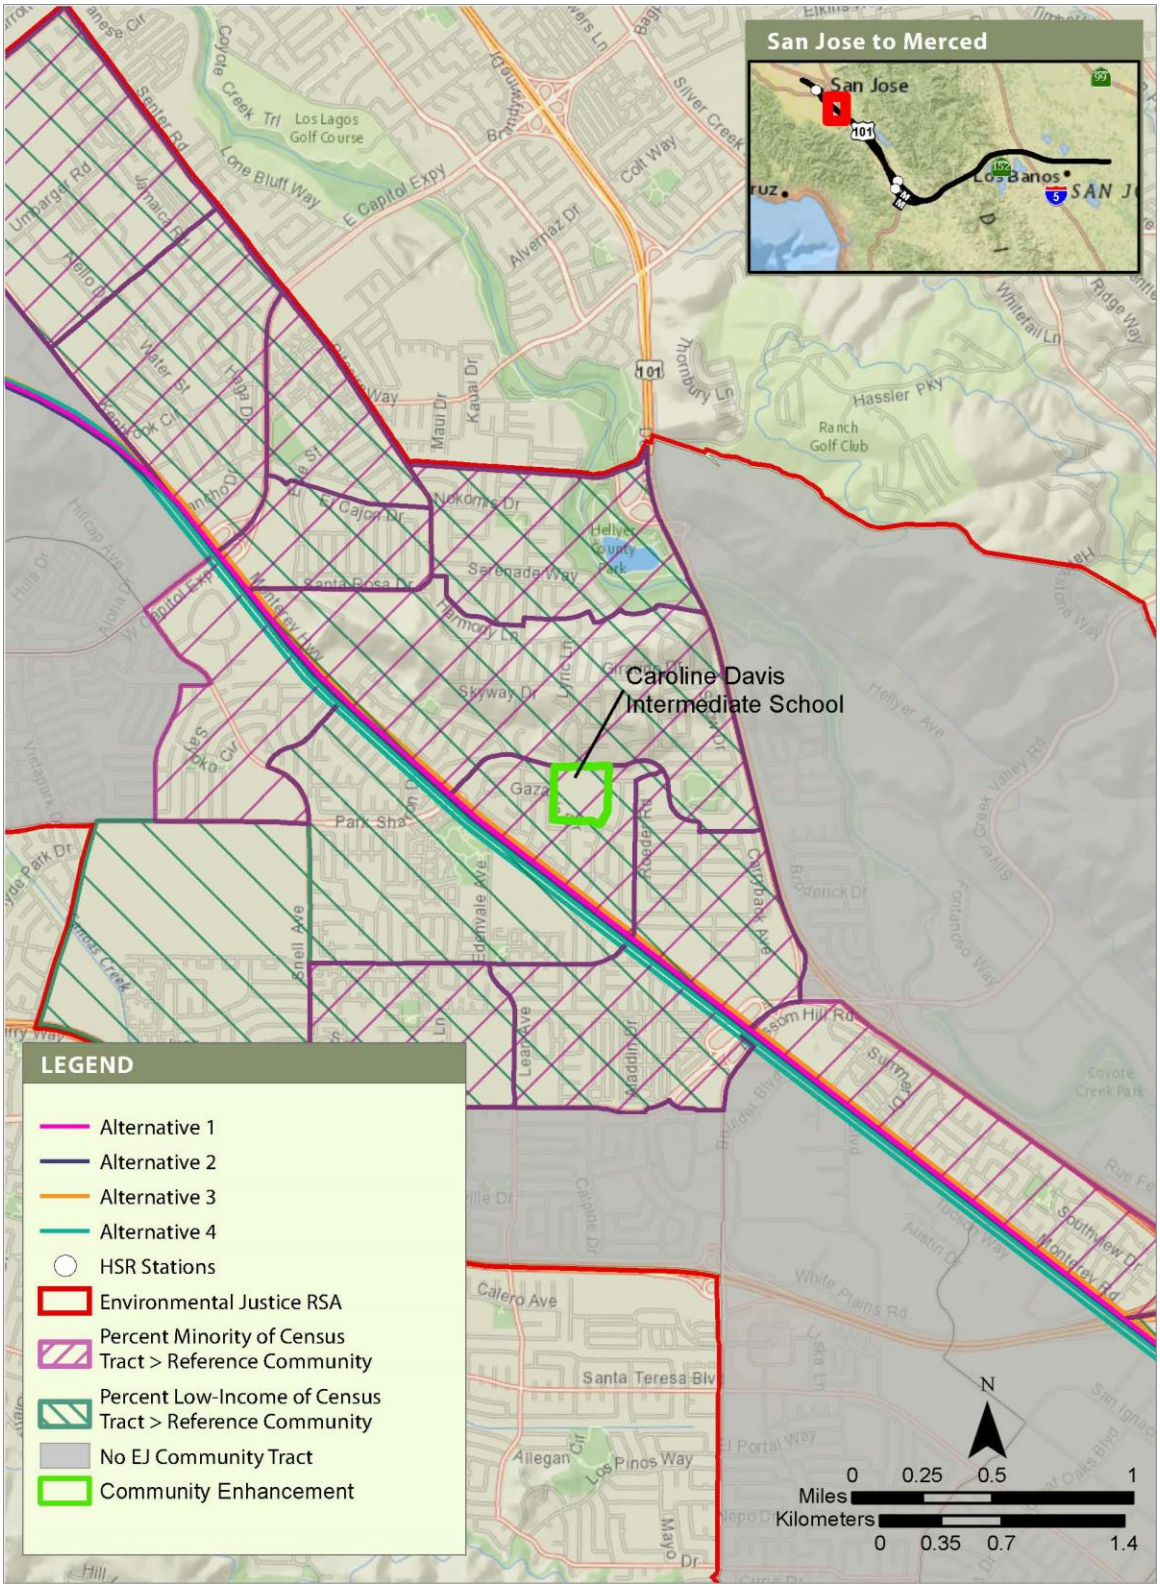

Figure SSJ-4 (Caroline) Davis Intermediate School All-Weather Turf and Track South San Jose

19. OFFSETTING MITIGATION MEASURE MH-OMM#1: PARK/TRAIL UNDER VIADUCT

COMMUNITY: MORGAN HILL

ALTERNATIVES: 1, 3

Measure Description

The proposed improvement will install bicycle trails and park/open space under the viaduct from Cochrane Road to Tennant Avenue under Alternatives 1 and 3. A bicycle trail will extend from the existing bike trail along Cochrane Road southward to the existing bike lane along Tennant Avenue. The improvement will also include a park/open space improvement along Walnut Grove Drive near Diana Avenue in the area of residential displacements with Alternatives 1 and 3. The improvement will also include landscaping along the trail.

Nexus to Disproportionately High and Adverse Effects

Alternatives 1 and 3 would result in adverse visual aesthetic effects on low-income populations related to the proposed aerial viaduct in Morgan Hill. Alternatives 1 and 3 would result in disproportionately high and adverse effects (DHAEs) relative to visual aesthetics on an end-to-end basis. While the proposed offsetting mitigation measure will not directly address the visual effects of the elevated rail alignment, it will provide indirect aesthetic benefits by creating a trail and park and will provide a sense of place for the affected neighborhoods.

Benefit to Minority Populations and Low-income Populations

The HSR alignment under Alternatives 1 and 3 would be on a viaduct through the neighborhoods along the west side of US 101, where the percentage of minority residents and low-income residents is greater than that within the reference community. The proposed improvement will provide recreation and connectivity benefits to the minority populations and low-income populations in these areas.

The project location and location of the preferred HSR alignment within the Morgan Hill community are shown graphically in Figure MH-1.

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following City of Morgan Hill policies:

- Policy CNF-12.2 Well-connected Neighborhood Centers. Provide for safe and convenient pedestrian and bicycle connections as well as transit access to support existing neighborhood centers, including shopping centers, medical offices, sports fields, and the Centennial Recreation Center.
- GOAL HC-3 Usable, complete, well-maintained, safe, and high-quality activities and amenities, including active and passive parks and recreational facilities, community gardens, and trails that are accessible to all ages, functional abilities, and socio-economic groups.
- Policy TR-8.6 Multi-Use Trail Accessibility. All multi-use bicycle/pedestrian trails shall comply with State and federal accessibility codes and standards, such as those established by the Americans with Disability Act (ADA) and California Access Code (Title 24, California Code of Regulation).

Community Input and Relationship to DHAEs

Community concerns, as expressed by City of Morgan Hill in comments about the Draft EIR/EIS, that are addressed include the following:

- "The aerial structure would remove….homes and landscaping from the streetscape, affecting highly sensitive residential viewers and diminishing the residential character of the view, reducing the visual quality…from moderate to low."
- "The City….requests design improvements and additional landscaping that would be helpful in reducing the visual effects of the aerial viaduct on this neighborhood….the [Authority]…should consider a landscaped neighborhood park that connects to City trails….consistent with the Bikeways, Trails, Parks and Recreation Master Plan for the City of Morgan Hill."

This improvement will provide for recreational opportunities and connectivity for residents in the vicinity. Because the HSR alignment is on an aerial viaduct in this area, residents in the community would have adverse aesthetic effects due to the presence of the overhead alignment.

Improvement Cost Estimate

Where Alternatives 1 and 3 are on viaduct with two columns, between Cochrane Road and Tennant Ave, the project would include property acquisition that would result in space beneath the viaduct that would be available to construct a bike trail using the right-of-way beneath the viaduct and between the two columns. There may also be possibilities to establish small "pocket" parks or landscaped open space. This improvement will include a bicycle and pedestrian trail, crosswalks, and landscaping and is estimated to cost $2 million in 2020 dollars.

Roles and Responsibilities

The Authority will provide funding. The City of Morgan Hill would design and construct the proposed improvements. Since the park/trail would be under the viaduct, the Authority and the City of Morgan Hill would need to coordinate during design to ensure that the requirements and needs of both the Authority and the City are met.

Assessment Based on Evaluation Criteria

Based on the screening criteria presented in this report, the following assessment has been completed for this improvement:

Evaluation

Criteria	Ranking 1-15	Justification
Benefit Intensity	15	This improvement will benefit the neighborhood that would be directly affected by the HSR project, particularly as there are no parks in the improvement area.
Relative Number of Beneficiaries	12	This improvement will be useable by the entire community.
Practicable	10	The improvement is conceptually practicable but requires further design.
Defined Project or Action	10	The improvement is only generally conceived; requires design.
Satisfy Authority Obligations	15	This improvement will directly benefit the residents most affected by the HSR project with Alternatives 1 and 3.
Defined Roles and Responsibilities	15	The Authority will fund this improvement. The City of Morgan Hill would implement. The Authority and the City would coordinate during design and construction to ensure that the requirements and needs of both parties are met.
Evidence of Agreement	10	The City of Morgan Hill proposed a trail and park/open space improvements under/along the viaduct between Diana Avenue and East Main Avenue in their comments on the Draft EIR/EIS.
Cost-Effectiveness	12	The cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	99	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

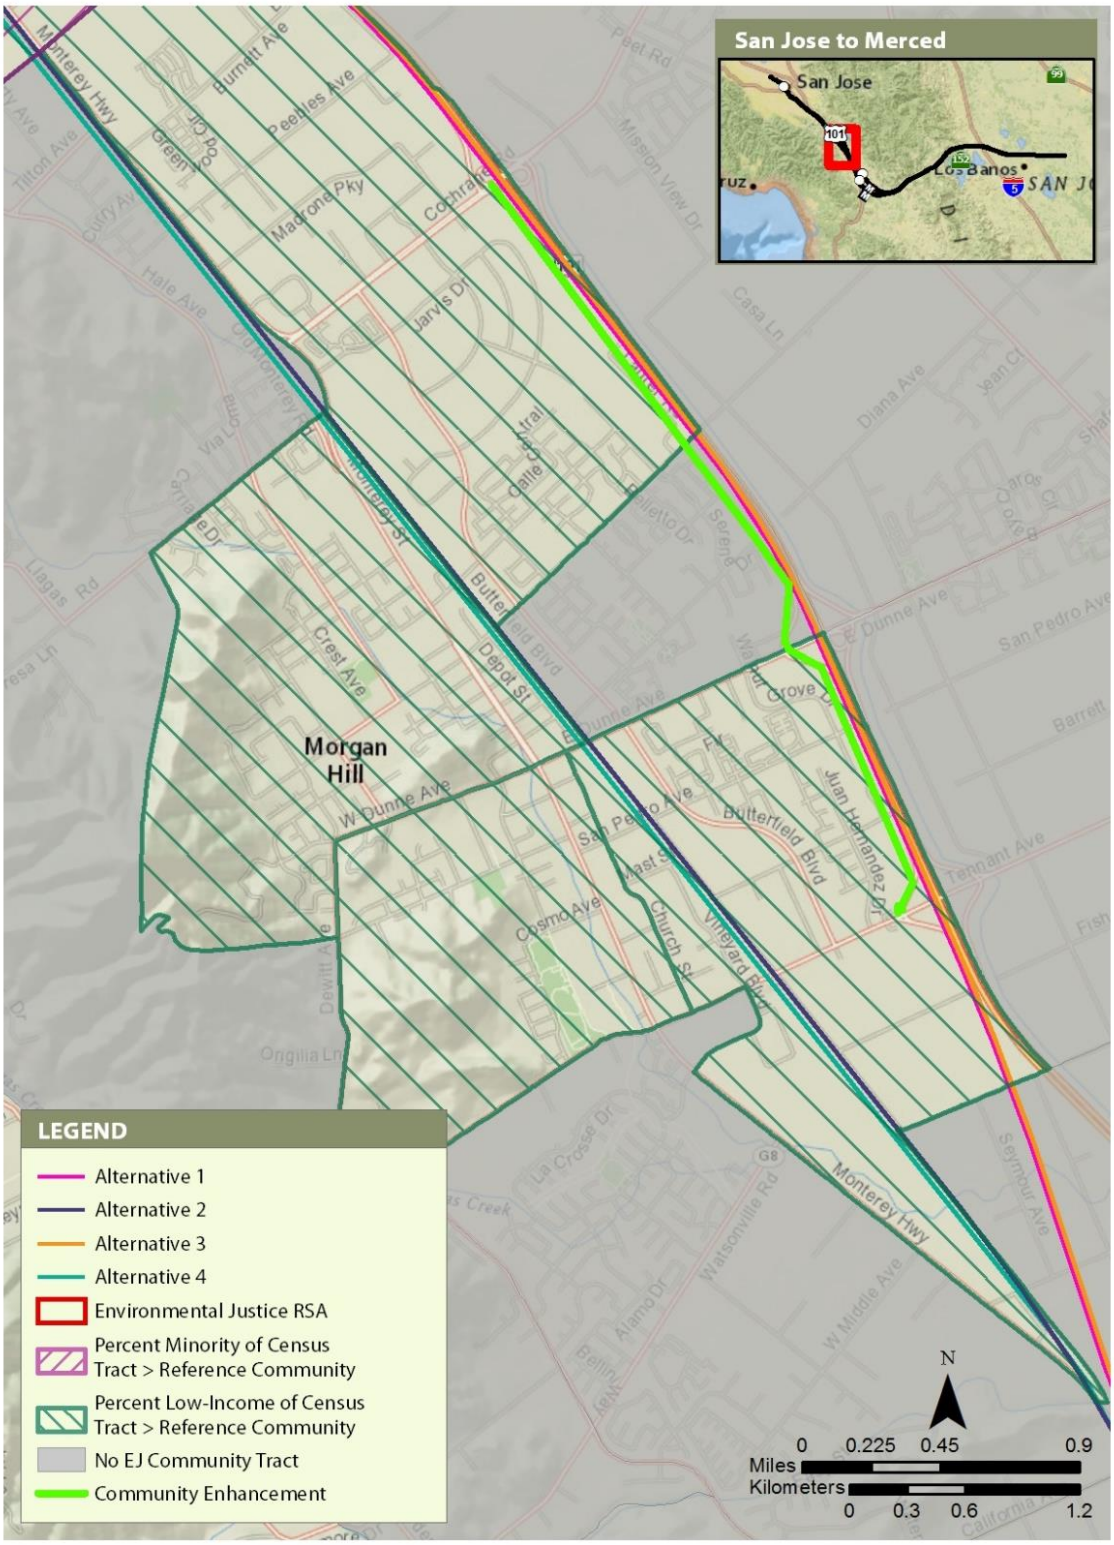

Figure MH-1 Park/Trail Under Viaduct
Morgan Hill

20. OFFSETTING MITIGATION MEASURE MH-OMM#2: RAILROAD AVENUE COMPLETE STREETS

COMMUNITY: MORGAN HILL

ALTERNATIVE: 2

Measure Description

With this improvement, Railroad Avenue will be reconstructed with complete streets improvements, landscaping, sidewalks, and curb and gutters.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 2, the project would result in disproportionate, high, and adverse effects (DHAEs) on low-income populations related to visual effects. There would be residual visual impacts within the Morgan Hill community after the application of project mitigation and consideration of project benefits. DHAEs would be related to the visual effects associated with the elevated embankment that would be constructed within this community. While the proposed improvement will not directly address visual effects resulting from the project, it will provide improvements that will offset visual DHAEs in this community by providing funding for complete streets improvements.

Benefit to Minority Populations and/or Low-income Populations

Under Alternative 2, the high-speed rail (HSR) alignment would pass through the Morgan Hill community, where the percentage of low-income populations is greater than that within the reference community.

The proposed improvement will benefit the community's low-income community by providing complete streets improvements to increase visual quality, as well as connectivity and general livability, in areas where low-income populations would be affected by the project's residual visual quality DHAEs. The location of the proposed improvement relative to the HSR alignment within the Morgan Hill community is shown graphically in Figure MH-2.

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following City of Morgan Hill policies:

- Policy CNF-12.2 Well-connected Neighborhood Centers. Provide for safe and convenient pedestrian and bicycle connections as well as transit access to support existing neighborhood centers, including shopping centers, medical offices, sports fields, and the Centennial Recreation Center.
- Policy TR-1.3 Transportation Safety. Implement strategies to ensure safe and appropriate operation of all components of the transportation system for all users, such as programs to lower crash rates and reduce the number of transportation-related injuries in the city through education, enforcement, engineering strategies, physical improvements, and operational systems. Prioritize strategies that improve safety for students, pedestrians, and bicyclists.
- Policy TR-6.A Bus Shelters from Private Development. Require developers to install bus shelters compatible with City architectural standards, where appropriate.

- Policy TR-8.6 Multi-Use Trail Accessibility. All multi-use bicycle/pedestrian trails shall comply with State and federal accessibility codes and standards, such as those established by the Americans with Disability Act (ADA) and California Access Code (Title 24, California Code of Regulation).
- Policy TR-9.3 Pedestrian System for Diverse Users. The trails and pedestrian system shall recognize and reflect the needs and abilities of pedestrians with a diverse range of age and ability.
- Policy TR-9.6 Pedestrian Facility Accessibility. All trails and pedestrian access shall comply with State and Federal accessibility codes and standards, such as those established by the Americans with Disability Act (ADA) and California Access Code (Title 24, California Code of Regulation).

Community Outreach Input and Relationship to DHAEs

This improvement will address the community need identified by City of Morgan Hill staff for complete streets, landscaping, and other improvements along, and adjacent to, the railway corridor.

This improvement will provide for visual enhancement and connectivity for pedestrians and improved livability for residents. Because the HSR alignment would run through this community, these same residents would experience residual visual quality DHAEs under Alternative 2 after the application of project mitigation and consideration of project benefits. This improvement will address community needs by providing for increased connectivity for bicycles and pedestrians, as well as enhanced visual quality.

Improvement Cost Estimate

Reconstruction of Railroad Avenue is estimated to cost $3.4 million.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to the City of Morgan Hill for design and implementation of this improvement.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria presented in this appendix, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	10	Very beneficial to local low-income populations in this area.
Relative Number of Beneficiaries	3	Beneficial to high-density downtown low-income population.
Practicable	15	Improvements are practicable and already designed.
Defined Project or Action	10	Design is completed.
Satisfy Authority Obligations	15	Transit mobility improvements along the corridor.
Defined Roles and Responsibilities	15	Authority will provide funding, and City would implement.
Evidence of Agreement	15	Morgan Hill supports.
Cost-Effectiveness	6	Cost is high relative to estimated number of beneficiaries.
TOTAL SCORE	89	

Authority = California High-Speed Rail Authority.

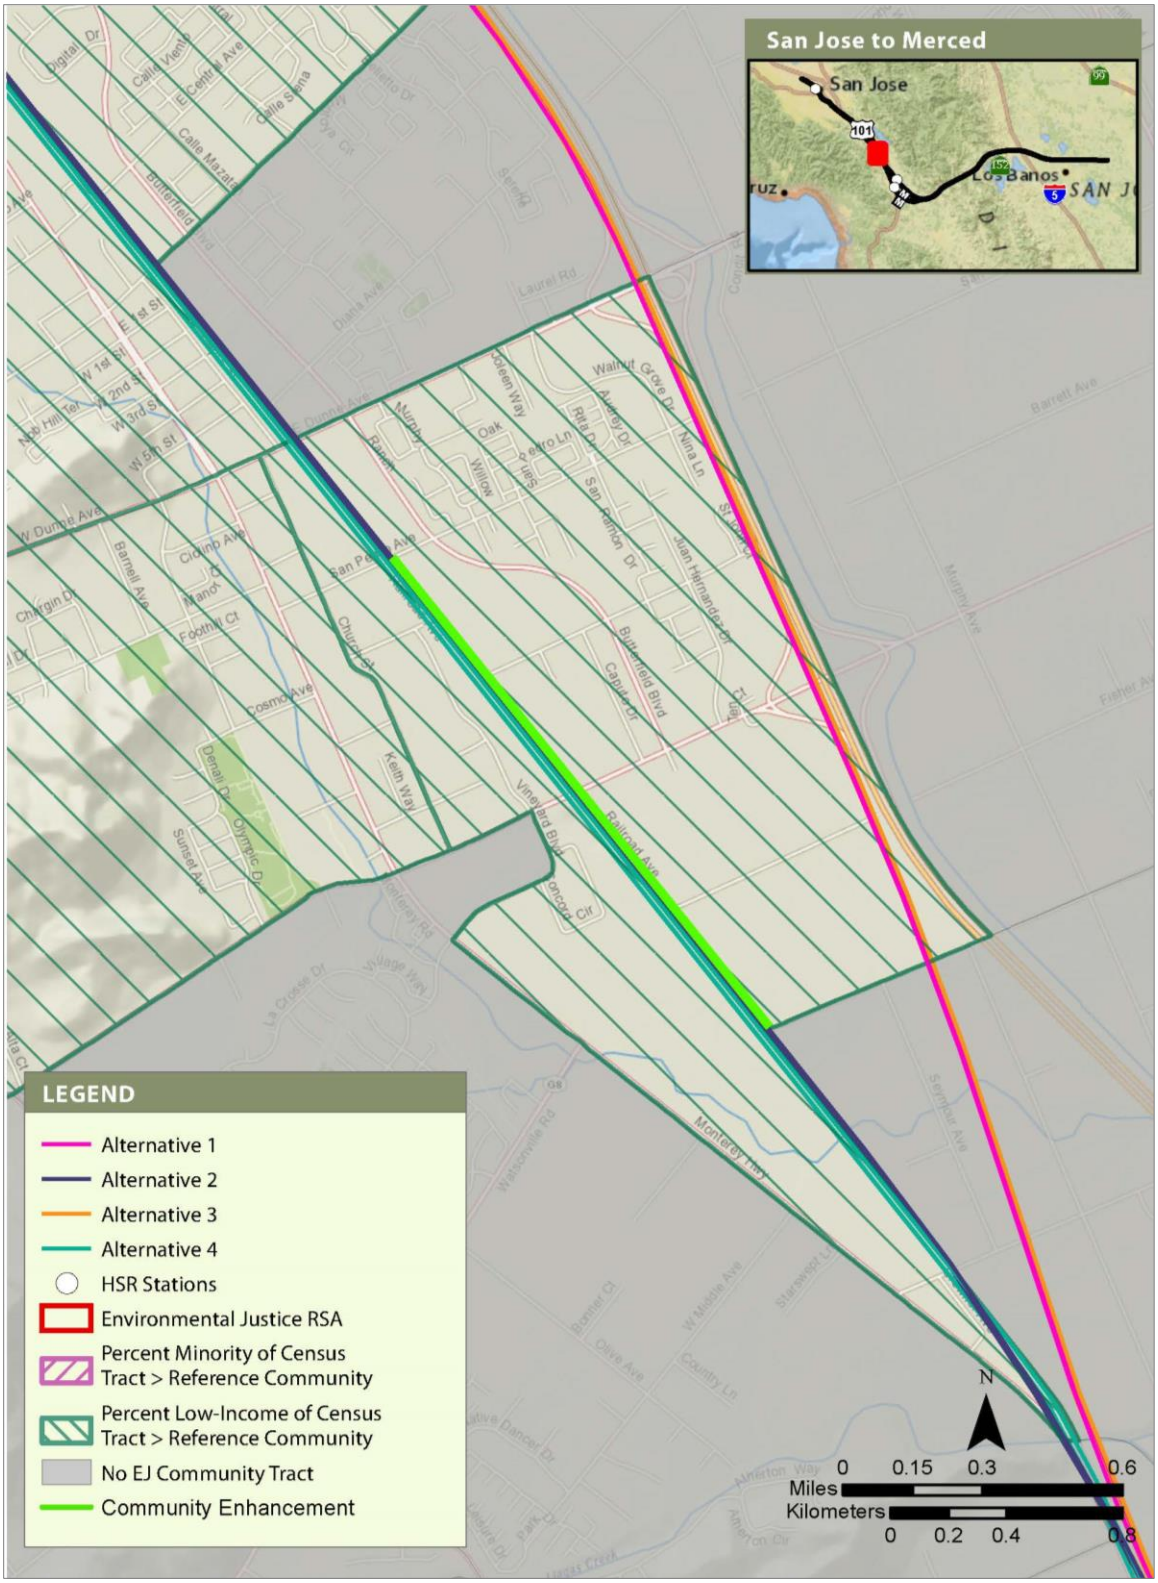

Figure MH-2 Railroad Avenue Complete Streets
Morgan Hill

21. OFFSETTING MITIGATION MEASURE MH-OMM#3: NOISE TREATMENTS FOR RESIDENTIAL BUILDINGS ALONG US 101 TO ADDRESS EXISTING NOISE

COMMUNITY: MORGAN HILL

ALTERNATIVE: 4

Measure Description

The proposed offsetting mitigation measure will upgrade existing residential structures to improve noise attenuation along US 101 to promote a healthier community and improve the quality of life in the neighborhood. Residences in Morgan Hill are adjacent to the west side of US 101 from approximately 0.35 mile north of East Main Avenue to Diana Avenue and from San Pedro Avenue to Barret Avenue. Noise barriers already exist along approximately one-third of the length of these residential areas adjacent to US 101. The proposed offsetting mitigation measure will provide resources to retrofit homes with noise reduction features, including upgraded windows and insulation.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAEs) on low-income populations related to the project's operational noise impacts after the consideration of mitigation and project benefits. Alternative 4 would have 33 severe operational noise impacts after noise barrier mitigation alone. With noise barrier mitigation and quiet zone implementation, then Alternative 4 would not have severe operational noise impacts, but quiet zones can only be implemented by local jurisdictions, so are not guaranteed. While the proposed improvement will not directly address operational noise effects resulting from the project, it will provide a related offset representing an investment in community noise reduction at sensitive receptors that already experience traffic noise from US 101. The improvement will reduce noise levels in the same community affected by project noise.

Benefit to Minority Populations and/or Low-Income Populations

The HSR alignment would traverse the Morgan Hill community, where the percentage of low-income population is greater than that within the reference community. The proposed offsetting mitigation measure will benefit the community's minority populations and low-income populations by providing health and livability improvements under Alternative 4 (Figure MH-3).

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following goals and policies from the *Morgan Hill 2035 General Plan:*

- Goal SSI-8, Prevention of noise from interfering with human activities or causing health problems.
- Goal SSI-9, Protection from noise associated with motor vehicles and railroad activity.
- Goal HE-2, Preservation and rehabilitation of the existing housing supply.

Community Outreach Input and Relationship to DHAEs

Community input provided by the City of Morgan Hill expressed concern about project noise effects.

This improvement will improve the health and quality of life for Morgan Hill residents in targeted areas. Because the HSR alignment would travel through Morgan Hill where there would be residual severe noise impacts after the application of proposed noise barrier mitigation under Alternative 4, this improvement will apply under Alternative 4.

Improvement Cost Estimate

The preliminary cost estimate is based on the lesser cost of implementation of one of these two options:

- Cost of retrofitting the first single-family or multifamily residences along the west side of US 101 in the areas noted above. The cost of retrofitting individual homes is based on an estimated $12,500 per single-family home and $25,000 per multifamily building. Based on aerial photography, there are an estimated 44 single-family homes in the areas noted above, which would result in an estimated retrofit cost of $550,000 to $1.1 million.
- Sound walls along US 101 where residences are present adjacent to the west side of the freeway in the areas noted above. The cost of sound walls is based on a unit cost of $70 per square foot (from the Final EIR/EIS, Volume 2, Appendix 3.4-B), assumed sound wall height of 14 feet, and an estimated 3,635 linear feet of sound walls—for a total cost of $3.6 million.

Based on these estimates, retrofitting individual homes would be more cost-effective than constructing sound walls and sound walls are not included in this measure.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to property owners to fund and implement this improvement and will fund the entire measure. A program implementer will need to be identified/developed to work with homeowners and building owners. The Authority will coordinate with the City of Morgan Hill regarding making homeowners aware of the program. The City would process any required encroachment and building permits needed for building upgrades.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Improvement will directly benefit minority populations and low-income populations in the community relatively close to all alternative alignments and Diridon Station and could substantially improve the indoor noise environment by reducing noise from the existing freeways.
Relative Number of Beneficiaries	3	Only the residents with noise treatments will benefit. This improvement will not benefit the entire community.
Practicable	15	Funding for this improvement is practicable. A program will need to be established to work with affected homeowners and building owners.
Defined Project or Action	10	Project is building insulation and window treatments. Exact criteria need to be developed.
Satisfy Authority Obligations	15	Improvement will provide community uplift. HSR project would result in noise effects, so there is a general nexus.
Defined Roles and Responsibilities	5	Authority will fund noise treatments. Program implementer needs to be identified. Caltrans would be consulted as needed.
Evidence of Agreement	15	City supports addressing noise effects
Cost-Effectiveness	3	Cost is high relative to estimated number of beneficiaries.
TOTAL SCORE	81	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

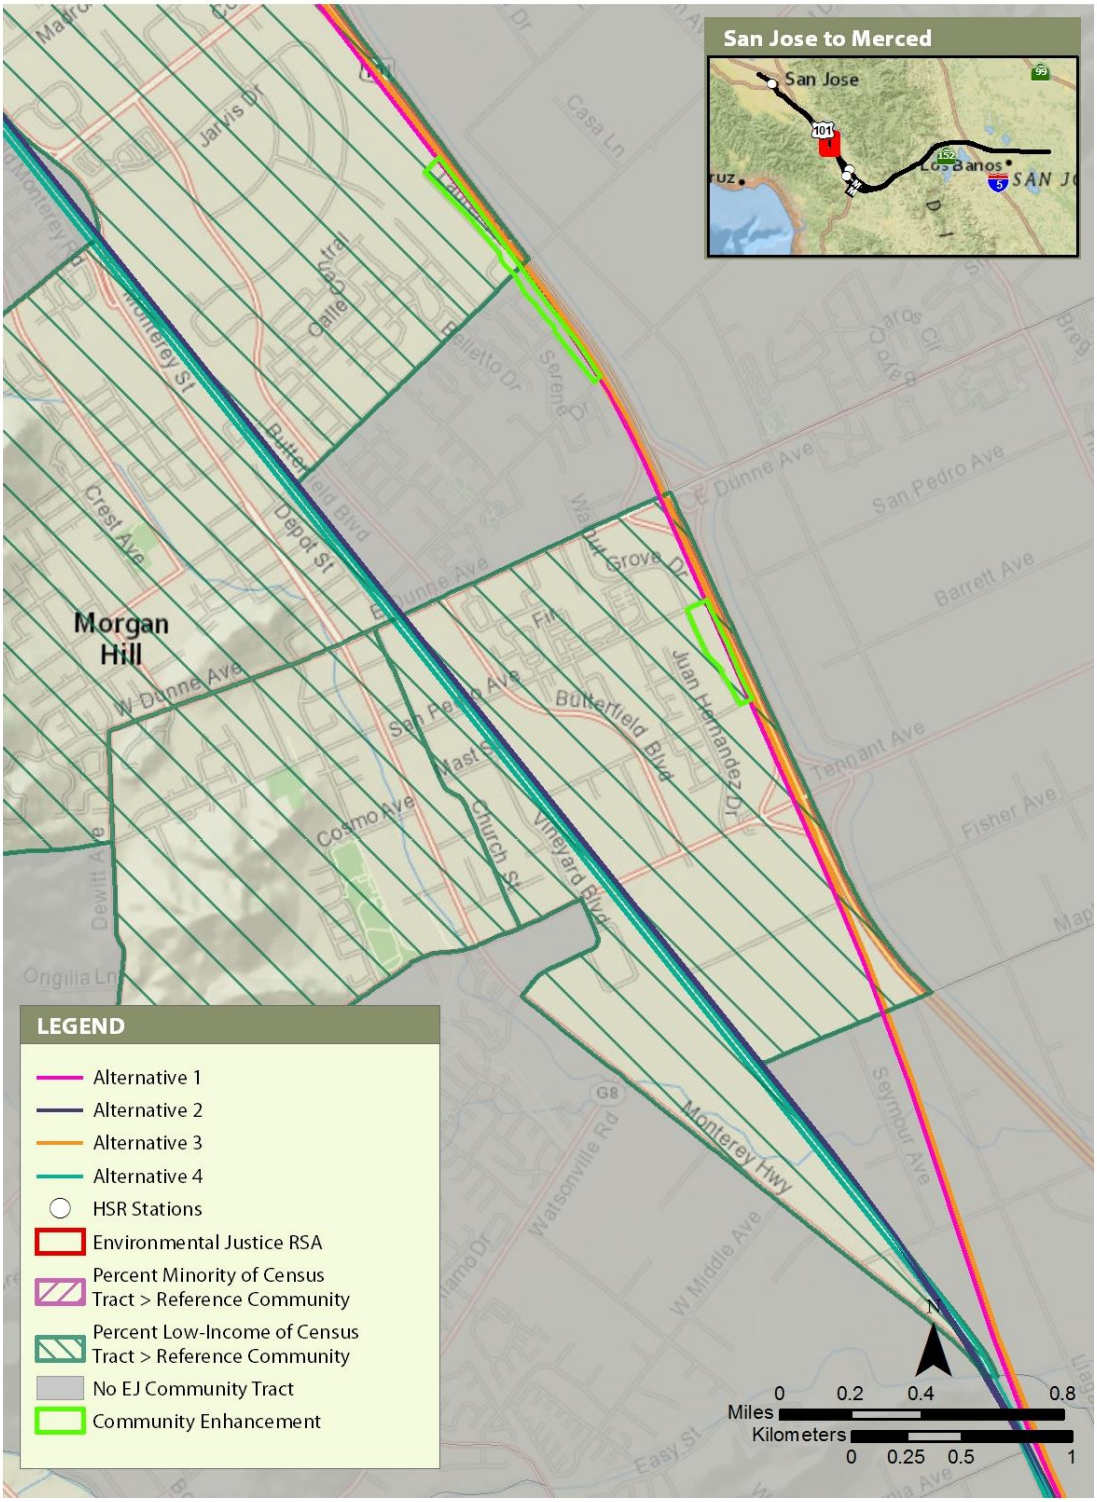

Figure MH-3 Noise Treatments for Residential Properties Along US 101 to Address Existing Noise, Morgan Hill

22. OFFSETTING MITIGATION MEASURE MH-OMM#4: MASTER PLAN DESIGN: CALTRAIN STATION ACCESS AND UNDERPASS

COMMUNITY: MORGAN HILL

ALTERNATIVES: 2, 4

Measure Description

The proposed improvement will be the California High-Speed Rail Authority (Authority) funding of the 30 percent design for a Master Plan for Caltrain Station and Access in Morgan Hill. This improvement will help the City, Caltrain, and Santa Clara Valley Transportation Authority (VTA) advance planning for access.

Nexus to Disproportionately High and Adverse Effects

Under Alternatives 2 and 4, the project would not result in disproportionately high and adverse effects (DHAE) on minority populations or low-income populations related to operational railroad safety, transit access, community connectivity, or community cohesion within Morgan Hill. While there would be some effect on emergency vehicle access response times in the southern part of the City along Middle Avenue, the affected area is not disproportionately minority or low-income.

Thus, this improvement is not being proposed due to a direct connection to a DHAE in Morgan Hill. Instead, based on the City's identification that the Authority funding of this Master Plan design will help to offset the project's general effects, the Authority has identified this as a general improvement.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment would pass through downtown Morgan Hill with Alternatives 2 and 4, where the percentage of low-income populations is greater than that within the reference community.

The proposed improvement will benefit the community's low-income residents by providing funding for Master Plan design of improved access and a pedestrian undercrossing at the Caltrain Station. The location of the proposed improvement, relative to the location of HSR alignment within the Morgan Hill community, is shown in Figure MH-4.

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the Morgan Hill Station Area Plan. The plan provides that transportation, planning, and design tools presented throughout the Station Area Master Plan are intended to build upon and update the Multi-Modal Circulation and Streetscapes chapters contained within the Downtown Specific Plan and support officials, transit providers, Morgan Hill residents, businesses, and property owners, as well as other stakeholders making decisions to improve and enhance the quality of the multimodal transportation environment throughout the Priority Development Area and downtown. All tools and recommendations are supplemental to already adopted plans, policies, and initiatives applicable in the area, including the Morgan Hill 2035 General Plan, the 2009 Downtown Specific Plan, the 2008 Bikeways Master Plan, the Downtown Placemaking Strategy, and the City of Morgan Hill's Street Standards.

Community Outreach Input and Relationship to DHAEs

The City of Morgan Hill requested this funding support from the Authority during September 2021 outreach concerning environmental justice. Access improvements, if advanced by the City, Caltrain, and/or VTA, would provide for enhanced safety, connectivity, and livability for pedestrians and bicyclists using the Morgan Hill Caltrain Station. However, as noted above, the project does not result in safety, connectivity, or transit access effects due to operations, so this improvement is a general improvement and not related narrowly to a specific DHAE.

Improvement Cost Estimate

This improvement only included funding for the Master Plan 30 percent design and does not include further design or construction costs. The 30 percent design is estimated to cost $500,000 based on other similar improvements. This improvement does not include Authority funding for improvements that may be identified in the Master Plan.

Roles and Responsibilities

The Authority will provide funding to the City of Morgan Hill for the 30 percent design of the Master Plan.

Assessment Based on Selection Criteria

Based on the screening criteria, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	10	Beneficial to low-income populations using the train station.
Relative Number of Beneficiaries	9	Beneficial to low-income populations north of Butterfield.
Practicable	15	Improvements are practicable and included in a plan.
Defined Project or Action	15	General character of design study understood.
Satisfy Authority Obligations	15	Transit mobility improvements.
Defined Roles and Responsibilities	15	Authority will provide funding, and Morgan Hill would implement (likely in coordination with Caltrain and VTA).
Evidence of Agreement	15	Morgan Hill is in strong support.
Cost-Effectiveness	12	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	106	

Authority = California High-Speed Rail Authority; VTA = Santa Clara Valley Transportation Authority.

Figure MH-4 Master Plan Design (30%) for Caltrain Station Access and Pedestrian Underpass
Morgan Hill

23. OFFSETTING MITIGATION MEASURE MH-OMM#5: SCHOOL BUS ROUTE STUDY

COMMUNITY: MORGAN HILL

ALTERNATIVE: 4

Measure Description

This measure includes Authority funding of a study to be prepared to evaluate and recommend potential enhancements to Morgan Hill Unified School District's (MHUSD) bus routes. The study will focus on the effects of the institution of at-grade high-speed rail (HSR) service through the City of Morgan Hill. Using the locations of MHUSD's students and school sites, the current route structure will be reviewed and assessed. Alternative route structures and service patterns will be developed and tested to assess if modifications could be made that would reduce the effects (delay) of additional gate-down time on bus service. As part of the study, the local community, stakeholders, and school officials will be engaged so their input can be heard and incorporated into the work.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionately high and adverse effects (DHAE) on low-income populations related to the project's operational noise impacts after the consideration of mitigation and project benefits. With noise barrier mitigation and quiet zone implementation, then Alternative 4 would not have severe operational noise impacts, but quiet zones can only be implemented by local jurisdictions, so are not guaranteed.

While the proposed improvement will not directly address visual or noise effects resulting from Alternative 4, it will address a general community need to enhance school bus service and could help minimize potential delays to school bus transit times resulting from gate-down times associated with project operation.

Benefit to Minority Populations and Low-Income Populations

Under Alternative 4, the HSR alignment would pass through the Morgan Hill community, where the percentage of low-income populations is greater than that within the reference community. The proposed improvement will benefit the community's minority residents and low-income residents by potentially supporting the development of improved safety and circulation for school buses crossing the rail corridor (Figure MH-5).

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following City of Morgan Hill policies:

- Policy TR-7.3. Rail Crossings. The City recognizes that rail crossings are essential to provide connections from neighborhoods to destinations such as schools, parks, and services. The convenience of rail crossings shall be balanced with the need to minimize safety and circulation impacts.

Community Outreach Input and Relationship to DHAEs

This improvement will address the community need identified by MHUSD for a study of school bus routes in the district to improve the safety of rail crossings. While this improvement will not directly address a DHAE, it will address the potential for bus delay and study ways to increase safety for students and bus drivers.

Improvement Cost Estimate

The cost for preparation of the study would be approximately $60,000, which is sufficient to study the catchment area for the Morgan Hill low-income community area. This improvement does not include any funding for additional buses, bus operation, or infrastructure improvements.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to the MHUSD to conduct a bus route study for the Morgan Hill low-income community area. Implementation of any recommendations included in the study would be the responsibility of the school district.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	10	Beneficial to low-income student population attending Ann Sobrato Elementary School.
Relative Number of Beneficiaries	15	Beneficial to students of Ann Sobrato Elementary School.
Practicable	15	The study can be completed.
Defined Project or Action	15	Design of the study is straightforward.
Satisfy Authority Obligations	15	Transit mobility improvements; only a study.
Defined Roles and Responsibilities	15	Authority will provide funding directly to the school district to design and implement the study.
Evidence of Agreement	15	MHUSD supports the study.
Cost-Effectiveness	15	Cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	115	

Authority = California High-Speed Rail Authority; MHUSD = Morgan Hill Unified School District.

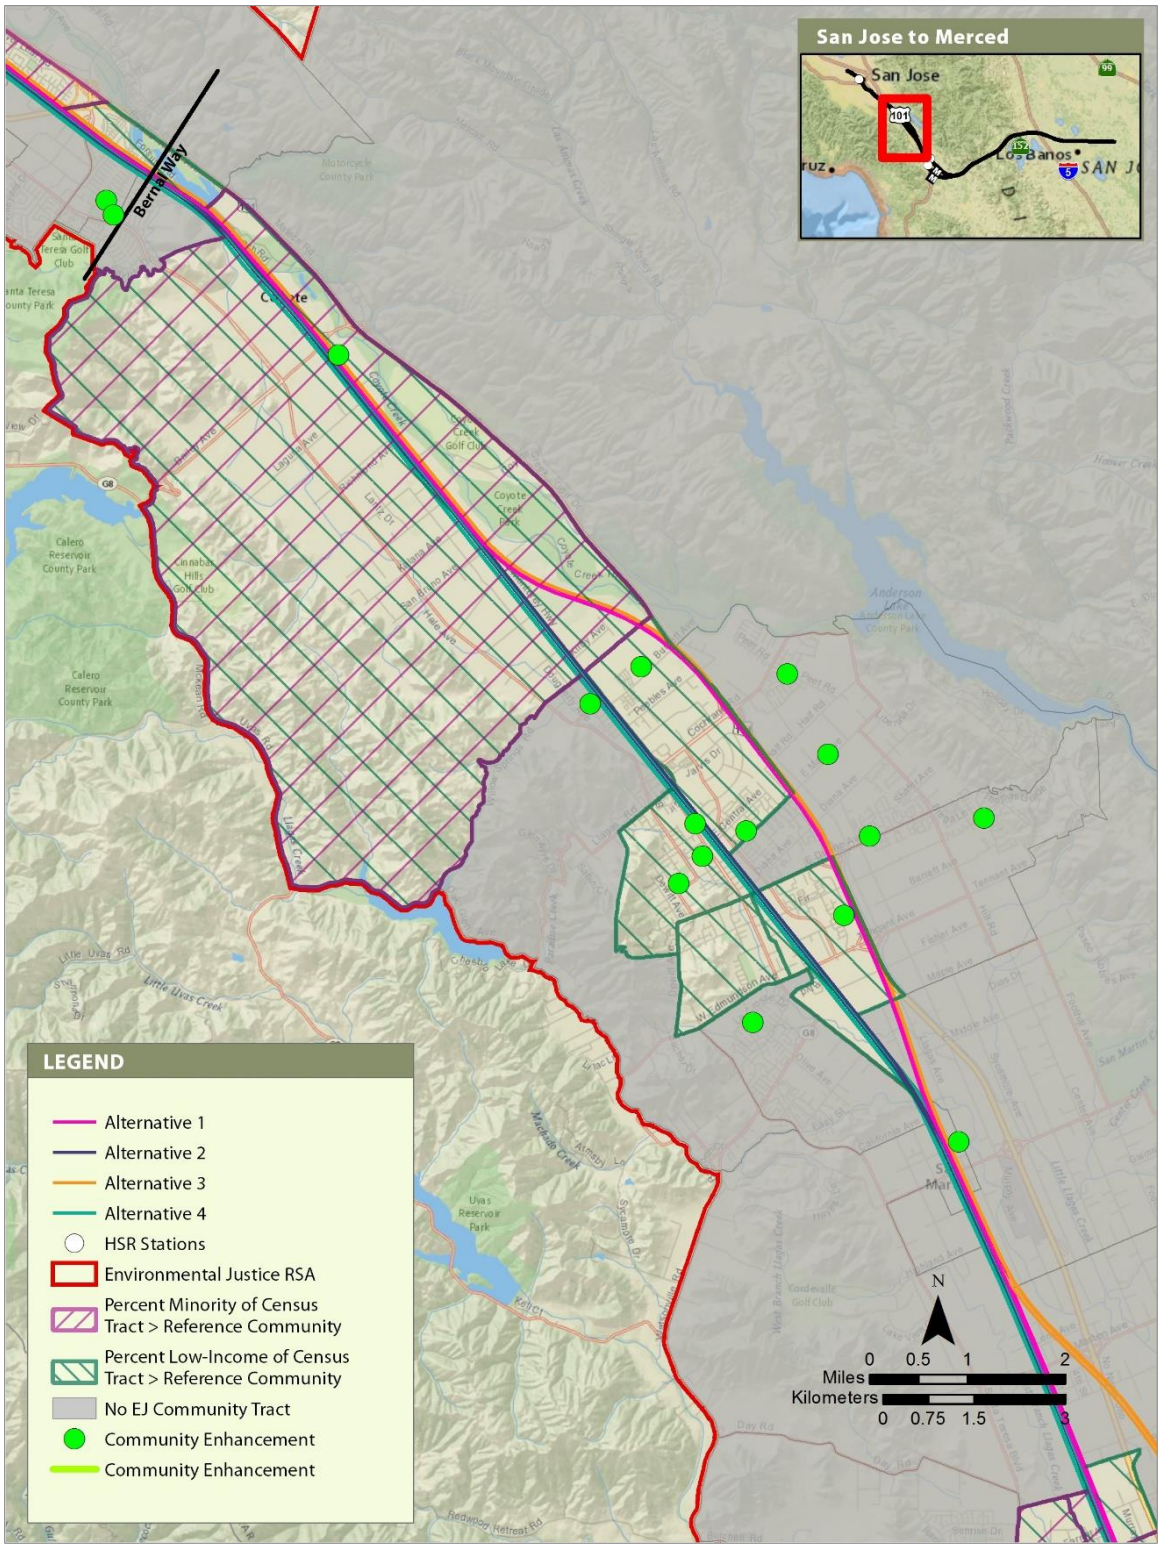

Figure MH-5 School Bus Route Study
Morgan Hill

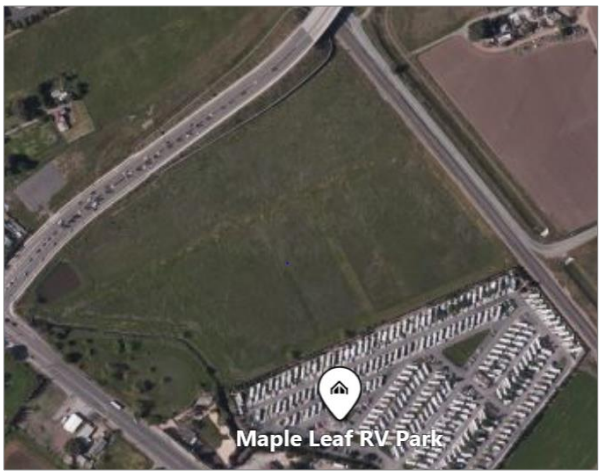
24. OFFSETTING MITIGATION MEASURE MH-OMM#6: NEW PARK SOUTH OF BUTTERFIELD BOULEVARD

COMMUNITY: MORGAN HILL

ALTERNATIVE: 2

Measure Description

The proposed improvement will involve conversion of an existing vacant property into a public park. The 8-acre property, which is bounded by Butterfield Boulevard to the north and Railroad Avenue to the east, is located north of, and adjacent to, the Maple Leaf Recreational Vehicle Park. This community-planned park includes a baseball field, an open sports turf area, a walking path, multigenerational fitness equipment, picnic areas, a community room, and bicycle pump tracks.



Nexus to Disproportionately High and Adverse Effects

Under Alternative 2, the project would result in disproportionately high and adverse effects (DHAEs) on low-income populations related to visual effects. There would be residual visual impacts within the Morgan Hill community after the application of project mitigation and consideration of project benefits. DHAEs would be related to the visual effects associated with the elevated embankment that would be constructed within this community. While the proposed improvement will not directly address visual effects resulting from the project, it will provide offsetting benefits that will offset visual DHAEs in this community by providing funding for a new park, which will improve the visual quality of this existing vacant lot and provide needed additional recreational amenities for community use.

Benefit to Minority Populations and Low-Income Populations

Under Alternative 2, the high-speed rail (HSR) alignment would pass through the Morgan Hill community, where the percentage of low-income individuals is greater than that within the reference community.

The proposed improvement will benefit the community's low-income residents by providing additional recreational opportunities, health benefits, and improved visual quality and livability (Figure MH-6). The park will be on a public transportation route, Bus Route 68, which will allow surrounding local low-income communities to travel there.

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following Morgan Hill General Plan goal:

- GOAL HC-3 Usable, complete, well-maintained, safe, and high-quality activities and amenities, including active and passive parks and recreational facilities, community gardens, and trails that are accessible to all ages, functional abilities, and socio-economic groups.

Community Outreach Input and Relationship to DHAEs

Community input, as expressed by City of Morgan Hill staff, that is addressed includes the following:

- Need for additional park space

This improvement will provide for increased recreational opportunities, health benefits, and enhanced visual quality and livability for Morgan Hill residents. Because the HSR alignment would run through this community, these same residents would experience residual visual quality DHAEs under Alternative 2 after the application of project mitigation and consideration of project benefits. This improvement will address community needs by providing additional park space, as well as enhanced visual quality.

Improvement Cost Estimate

Southwest of Butterfield Boulevard and Railroad Avenue is an approximately 8-acre undeveloped property that could include development of a new community planned park. Improvements to this site include a baseball field, an open sports turf area, a walking path, multigenerational fitness equipment, picnic areas, a community room, and bicycle pump tracks for $10 million. The site has already been acquired. The improvement is eligible for State Park grant funding, as well as grants from Santa Clara Valley Open Space Authority, Santa Clara County Park, and Valley Water Grant funding. It is also eligible for city park impact funds.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to the City of Morgan Hill for design and implementation of this improvement.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Very beneficial to multigenerational low-income populations.
Relative Number of Beneficiaries	12	Beneficial to the local RV park and other local low-income populations.
Practicable	15	Improvements are practicable, as the project has been approved for construction.
Defined Project or Action	15	Design has been approved for construction.
Satisfy Authority Obligations	15	Recreation improvements near rail is not safety or connectivity.
Defined Roles and Responsibilities	15	Authority will provide funding, and City would implement.
Evidence of Agreement	15	Morgan Hill has completed permits, approvals, and a community process.
Cost-Effectiveness	9	Cost is somewhat high relative to estimated number of beneficiaries.
TOTAL SCORE	111	

Authority = California High-Speed Rail Authority; RV = recreational vehicle.

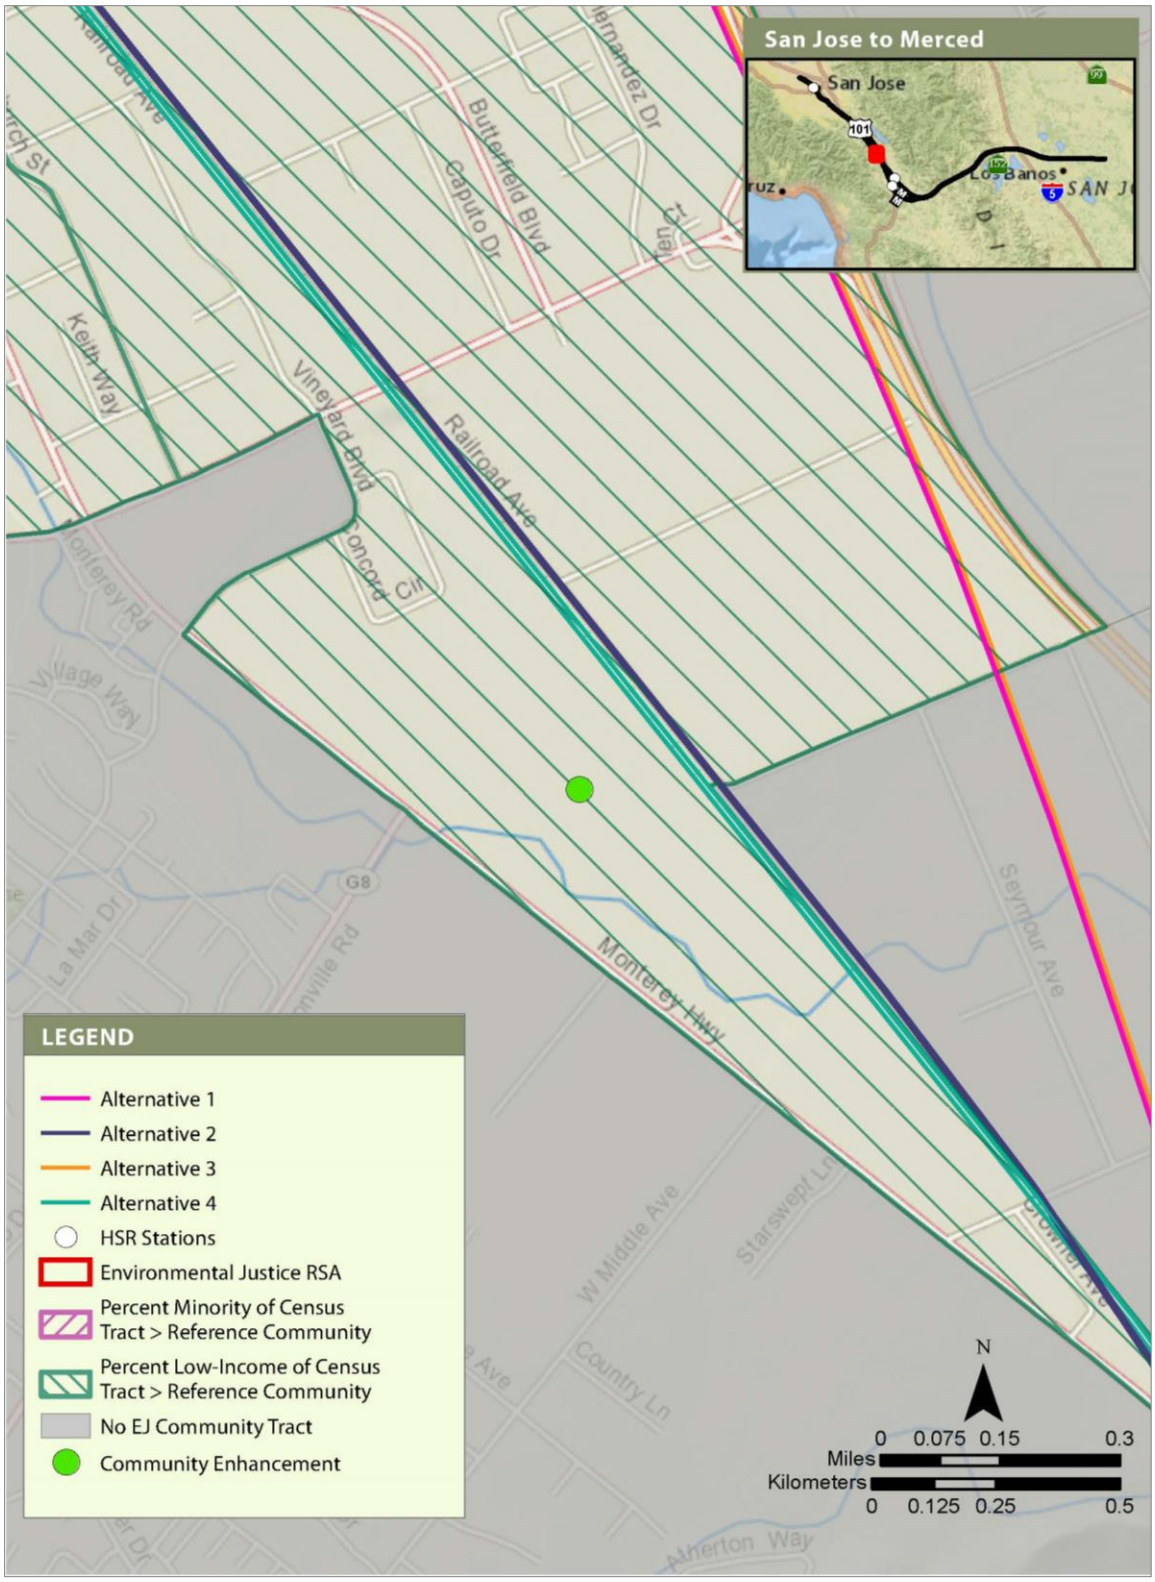


Figure MH-6 Purchase New Park South of Butterfield Boulevard Morgan Hill

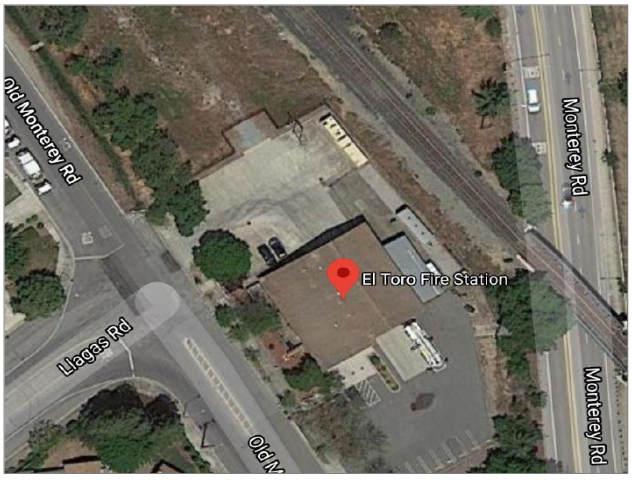
25. OFFSETTING MITIGATION MEASURE MH-OMM#7: NEW PARK NORTH OF EL TORO FIRE STATION

COMMUNITY: MORGAN HILL

ALTERNATIVE: 2

Measure Description

This measure will include the Authority providing funding for the open space to the north of El Toro Fire Station to be repurposed as a new park including landscaping improvements.



Nexus to Disproportionately High and Adverse Effects

Under Alternative 2, the project would result in disproportionately high and adverse effects (DHAEs) on low-income populations related to visual effects. There would be residual visual impacts within the Morgan Hill community after the application of project mitigation and consideration of project benefits. DHAEs would be related to the visual effects associated with the elevated embankment that would be constructed within this community. While the proposed improvement will not directly address visual effects resulting from the project, it will provide offsetting mitigation measures that will offset visual DHAEs in this community by providing funding for a new park, which will improve the visual quality of this existing vacant lot and provide needed additional recreational amenities for community use.

Benefit to Minority Populations and Low-Income Populations

Under Alternative 2, the high-speed rail (HSR) alignment would pass through the Morgan Hill community, where the percentage of low-income populations is greater than that within the reference community.

The proposed improvement will benefit the community's minority residents and low-income residents by providing enhanced recreational opportunities and visual improvements (Figure MH-7).

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following Morgan Hill General Plan goal:

- GOAL HC-3 Usable, complete, well-maintained, safe, and high-quality activities and amenities, including active and passive parks and recreational facilities, community gardens, and trails that are accessible to all ages, functional abilities, and socio-economic groups.

The site is not identified in the City's Parks Master Plan.

Community Outreach Input and Relationship to DHAEs

This improvement addresses community needs expressed by the Santa Clara County Parks and Recreation Department and the City of Morgan Hill for additional park space and the desire of the County to find partners to fill gaps in the park system. This improvement will provide for increased recreational opportunities, health benefits, and enhanced visual quality and livability for Morgan Hill residents. Because the HSR alignment would run through this community, these same residents would experience residual visual quality DHAEs under Alternative 2 after the application of project mitigation and consideration of project benefits. This improvement will address community needs by providing additional park space, as well as enhanced visual quality.

Improvement Cost Estimate

Conversion of the area to a park space is estimated to cost $1.8 million based on other similar size park spaces and passive uses, such as picnic tables and shade structures.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding to the City of Morgan Hill for design and implementation of this improvement.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Beneficial to low-income residential populations looking for park space.
Relative Number of Beneficiaries	3	The site is not in a low-income area but is low-income adjacent and likely would draw from the south low-income population; low-income populations to the east would need to cross the railroad tracks.
Practicable	5	The site is relatively small for community needs.
Defined Project or Action	10	Design is simple and not require much effort.
Satisfy Authority Obligations	10	Recreation improvements, not safety or connectivity.
Defined Roles and Responsibilities	15	Authority will provide funding, and City would implement.
Evidence of Agreement	15	Morgan Hill recommended this measure in their comments on the Draft EIR/EIS
Cost-Effectiveness	9	Cost is somewhat high relative to estimated number of beneficiaries.
TOTAL SCORE	82	

Authority = California High-Speed Rail Authority; EIR = environmental impact report; EIS = environmental impact statement.

Figure MH-7 New Park North of El Toro Fire Station
Morgan Hill

26. OFFSETTING MITIGATION MEASURE G-OMM#1: SIDEWALK AND CURB IMPROVEMENTS

COMMUNITY: GILROY

ALTERNATIVE: 4

Measure Description

The proposed offsetting mitigation measure will improve sidewalks and curb ramps throughout the City of Gilroy in accordance with the results of the upcoming Citywide Sidewalk Condition Assessment Project. Currently, there are several sidewalks throughout the City that have gaps in the pedestrian network, damaged sidewalks, and curb ramps that are not compliant with current Americans with Disability Act (ADA) standards. The offsetting mitigation measure will make such improvements to the sidewalks and curb ramps identified in the assessment to improve pedestrian circulation and safety throughout the City.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAEs) on low-income populations related to emergency vehicle response delay. Under Alternative 4, there would be residual safety effects related to emergency vehicle response times that would affect several locations with low-income populations after the application of project mitigation and consideration of project benefits. DHAEs would be related to safety conditions in Gilroy under Alternative 4. While the proposed improvement will not directly address emergency response delay resulting from the project, it will provide a related safety offset with a nexus to the emergency response vehicle delay DHAE in the same community where effects would occur.

Benefit to Minority Populations and Low-Income Populations

The HSR alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The offsetting mitigation measure will benefit the City's minority communities and low-income communities under Alternative 4 by providing safety, connectivity, and community cohesion improvements (Figure G-1).

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development (HUD) administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. A Neighborhood Revitalization Strategy Area (NRSA) is an area targeted for revitalization by improvements funded through the CDBG Program, which funds local community development efforts to provide affordable housing, reduce poverty, and enhance local infrastructure. The proposed Sidewalk and Curb Improvement Project is located within the City of Gilroy's NRSA, an area of both minority concentration and low-income concentration that needs higher levels of investment to meet the needs of the community. The proposed offsetting mitigation measure will be consistent with the following *Gilroy 2040 General Plan* goals and policies:

Policy 12.02, System Function and Neighborhood Protection: Ensure that the existing and proposed highways, streets, bikeways and pedestrian paths serve the functions they are intended to serve, while protecting the character of residential neighborhoods.

- Goal 14, Bicycle and Pedestrian Circulation: Bicycling and walking as significant transportation modes, promoting personal health and recreational enjoyment while minimizing energy consumption and environmental degradation.
  - Policy 14.03, Bicycle and Pedestrian Paths and Facilities: Correct deficiencies, expand existing facilities, and provide for the design of safer, convenient and attractive bicycle and pedestrian facilities whenever possible. Proposed roadways will be planned to accommodate bicycle traffic in accordance with the bikeway designations set forth in the City's Bicycle Transportation Plan. Similarly, greenbelts, linear parks, public easements and drainages reserved in public open space will be planned to accommodate bike and pedestrian traffic if they are so designed in the Bicycle Transportation plan.

In addition, the proposed offsetting mitigation measure will be consistent with the Gilroy City Council goal of ensuring that neighborhoods benefit equally from City services.

Community Outreach Input and Relationship to DHAEs

Community outreach input from the City of Gilroy indicated the need for sidewalk and curb ramp improvements to enhance safety, connectivity, and community cohesion for Gilroy residents. The proposed offsetting mitigation measure will provide benefits to students at nearby schools by providing improved pedestrian connectivity to schools, downtown Gilroy, and the HSR station area.

This offsetting mitigation measure will provide improvements that will construct new sidewalks and repair existing sidewalks to close gaps in the pedestrian network and upgrade and/or construct curb ramps in compliance with ADA standards. Because the HSR alignment would travel through the developed areas of Gilroy (including downtown) under Alternative 4, and the community would experience residual safety effects, this offsetting mitigation measure will apply to Alternative 4.

Improvement Cost Estimate

The proposed project would cost approximately $500,000, including design and construction costs, construction management and inspection, as well as contingencies.

Roles and Responsibilities

The City of Gilroy receives CDBG funding to implement projects that benefit the City's minority neighborhoods and low-income neighborhoods. The City of Gilroy could partner with the California High-Speed Authority (Authority) to implement this project and seek to combine CDBG funds with funding provided by the Authority.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this offsetting mitigation measure.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This offsetting mitigation measure will enhance safety and quality of life in Gilroy neighborhoods generally.
Relative Number of Beneficiaries	12	This offsetting mitigation measure will benefit multiple neighborhoods.
Practicable	15	This offsetting mitigation measure can be funded and constructed.
Defined Project or Action	15	The City has defined the improvements; the locations are to be determined.
Satisfy Authority Obligations	15	This offsetting mitigation measure will provide safety, accessibility, and quality of life benefits to neighborhoods directly and indirectly affected by the HSR project.
Defined Roles and Responsibilities	15	The Authority will contribute funding. The City of Gilroy would implement and maintain the project.
Evidence of Agreement	15	The community improvement is a priority for the City.
Cost-Effectiveness	15	The cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	117	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

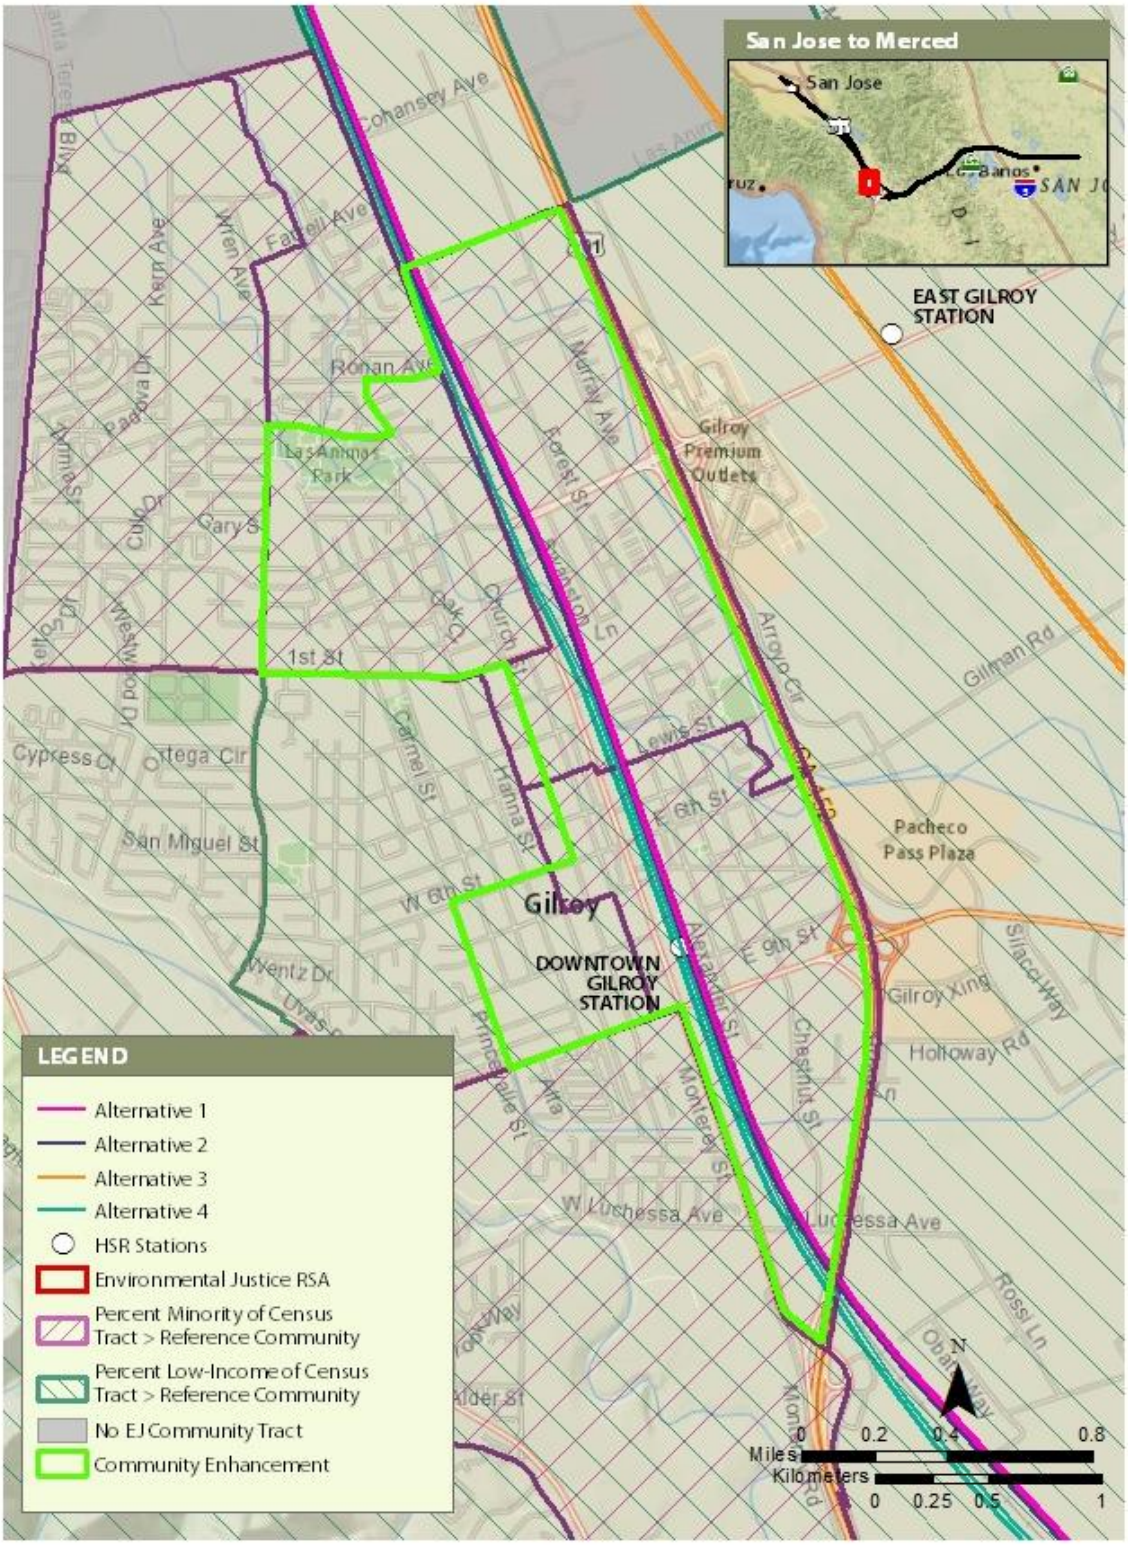


Figure G-1 Sidewalk and Curb Improvement Area Gilroy

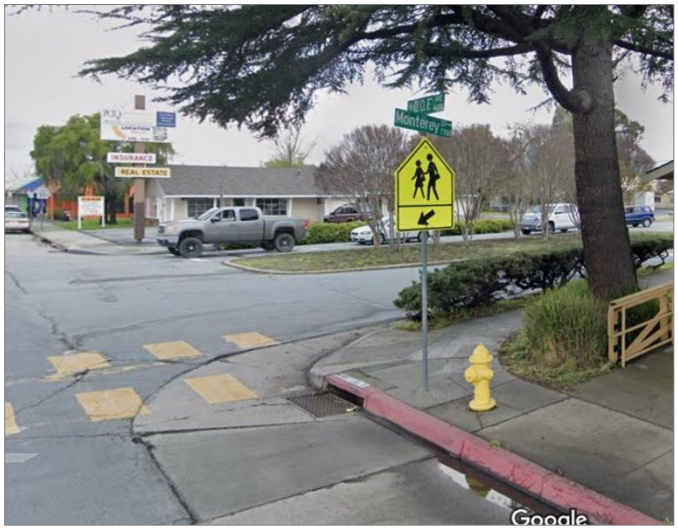
27. OFFSETTING MITIGATION MEASURE G-OMM#2: BIKEWAY IMPROVEMENTS (IOOF AVENUE, MONTEREY ROAD, 6TH STREET, 4TH STREET, AND ALEXANDER STREET)

COMMUNITY: GILROY

ALTERNATIVE: 4

Measure Description

This improvement will include bikeway enhancements to five roads within the City of Gilroy (IOOF Avenue, Monterey Road, 6th Street, 4th Street, and Alexander Street) in accordance with the *Gilroy Station Area Plan* and the City of Gilroy's *Bicycle/Pedestrian Transportation Plan* as follows:



- IOOF Avenue: Class II bike lanes along IOOF Avenue between Monterey Road and Murray Avenue.
- Monterey Road: Class II bike lanes between the northern Gilroy City limit and 3rd Street.
- 6th Street: Additional bicycle markings between Chestnut Street and Camino Arroyo.
- 4th Street: A bike boulevard along 4th Street between Monterey Road and Miller Avenue.
- Alexander Street: Bike lanes between Lewis Street and Chestnut Street.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAEs) on low-income populations related to emergency vehicle response delay, as there would be residual safety effects that would affect several locations with low-income populations after the application of project mitigation and consideration of project benefits. DHAEs would be related to safety conditions in Gilroy under Alternative 4. While the proposed improvement will not directly address emergency response delay resulting from the project, it will provide a related safety offset with a nexus to the emergency response vehicle delay DHAE in the same community where effects would occur.

Benefit to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community.

The proposed improvement under Alternative 4 will benefit the minority residents and low-income residents by providing infrastructure improvements that will enhance safety for pedestrians and bicyclists through five of the City's roads. The improvement also will provide health benefits and improve circulation and cohesion throughout the area.

The location of the proposed improvement relative to the HSR alignment within the Gilroy community is shown graphically in Figure G-2.

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development (HUD) administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. A Neighborhood Revitalization Strategy Area (NRSA) is an area targeted for revitalization by improvements funded through the CDBG Program, which funds local community development efforts to provide affordable housing, reduce poverty, and enhance local infrastructure. The proposed improvements along the five roads are located within, or would cross through, the City's NRSA, an area of both minority concentration and low-income concentration that needs higher levels of investment to meet the needs of the community. The proposed improvement will be consistent with the following goals and policies from the *Gilroy 2040 General Plan*:

- Goal 14, Bicycle and Pedestrian Circulation: Bicycling and walking as significant transportation modes, promoting personal health and recreational enjoyment while minimizing energy consumption and environmental degradation.
  - Policy 14.03, Bicycle and Pedestrian Paths and Facilities: Correct deficiencies, expand existing facilities, and provide for the design of safer, convenient and attractive bicycle and pedestrian facilities whenever possible. Proposed roadways will be planned to accommodate bicycle traffic in accordance with the bikeway designations set forth in the City's Bicycle Transportation Plan. Similarly, greenbelts, linear parks, public easements and drainages reserved in public open space will be planned to accommodate bike and pedestrian traffic if they are so designed in the Bicycle Transportation plan.

In addition, the proposed improvement is also consistent with the following goals of the City's *Bicycle/Pedestrian Transportation Plan*:

1: Improve bicycle circulation

2: Increase use of bicycling for short- and long-range trips, and in turn reduce the use of motor vehicles.

3: Design the streets and roads to be "bicycle friendly" to equally accommodate both motorized and non-motorized modes of transportation.

Furthermore, the proposed improvement will be consistent with the improvements laid out in the *Gilroy Station Area Plan*, and with the Bicycle/Pedestrian Transportation Plan's goal of building a downtown network that encourages biking and walking.

Community Outreach Input and Relationship to DHAEs

This improvement incorporates community input provided through the City's Connecting Communities Strategy and the Bicycle/Pedestrian Transportation Plan regarding the need for improved bicycle and pedestrian circulation and facilities.

This improvement will provide bicycle facility improvements resulting in enhanced safety, community cohesion, health, and connectivity for Gilroy residents. Because the HSR alignment would travel through developed areas of Gilroy (including downtown Gilroy), and the community would experience residual safety effects under Alternative 4, this offsetting mitigation measure will apply under Alternative 4.

Improvement Cost Estimate

Bicycle improvements on IOOF Avenue, Monterey Road, 6th Street, 4th Street, and Alexander Street are estimated to cost $550,000.

Roles and Responsibilities

The City of Gilroy receives CDBG funding to implement projects that benefit the City's minority neighborhoods and low-income neighborhoods. The City of Gilroy could partner with the California High-Speed Rial Authority (Authority) in funding this project and could seek to combine CDBG funds with funding provided by the Authority.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This improvement will help provide bicycling connections throughout the City of Gilroy, including for minority populations and low-income populations.
Relative Number of Beneficiaries	12	This improvement will help bicyclists in Gilroy, but not all residents utilize bicycles.
Practicable	15	This improvement could be funded and built.
Defined Project or Action	10	The general nature of the bikeway improvements is understood; further design is necessary.
Satisfy Authority Obligations	15	This improvement will provide connections and enhance safety in the community affected by the HSR project.
Defined Roles and Responsibilities	15	The Authority will provide funding; the City of Gilroy would implement the improvements.
Evidence of Agreement	15	The City is in support of the improvement's intent.
Cost-Effectiveness	15	The cost is low relative to estimated number of beneficiaries
TOTAL COST	112	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

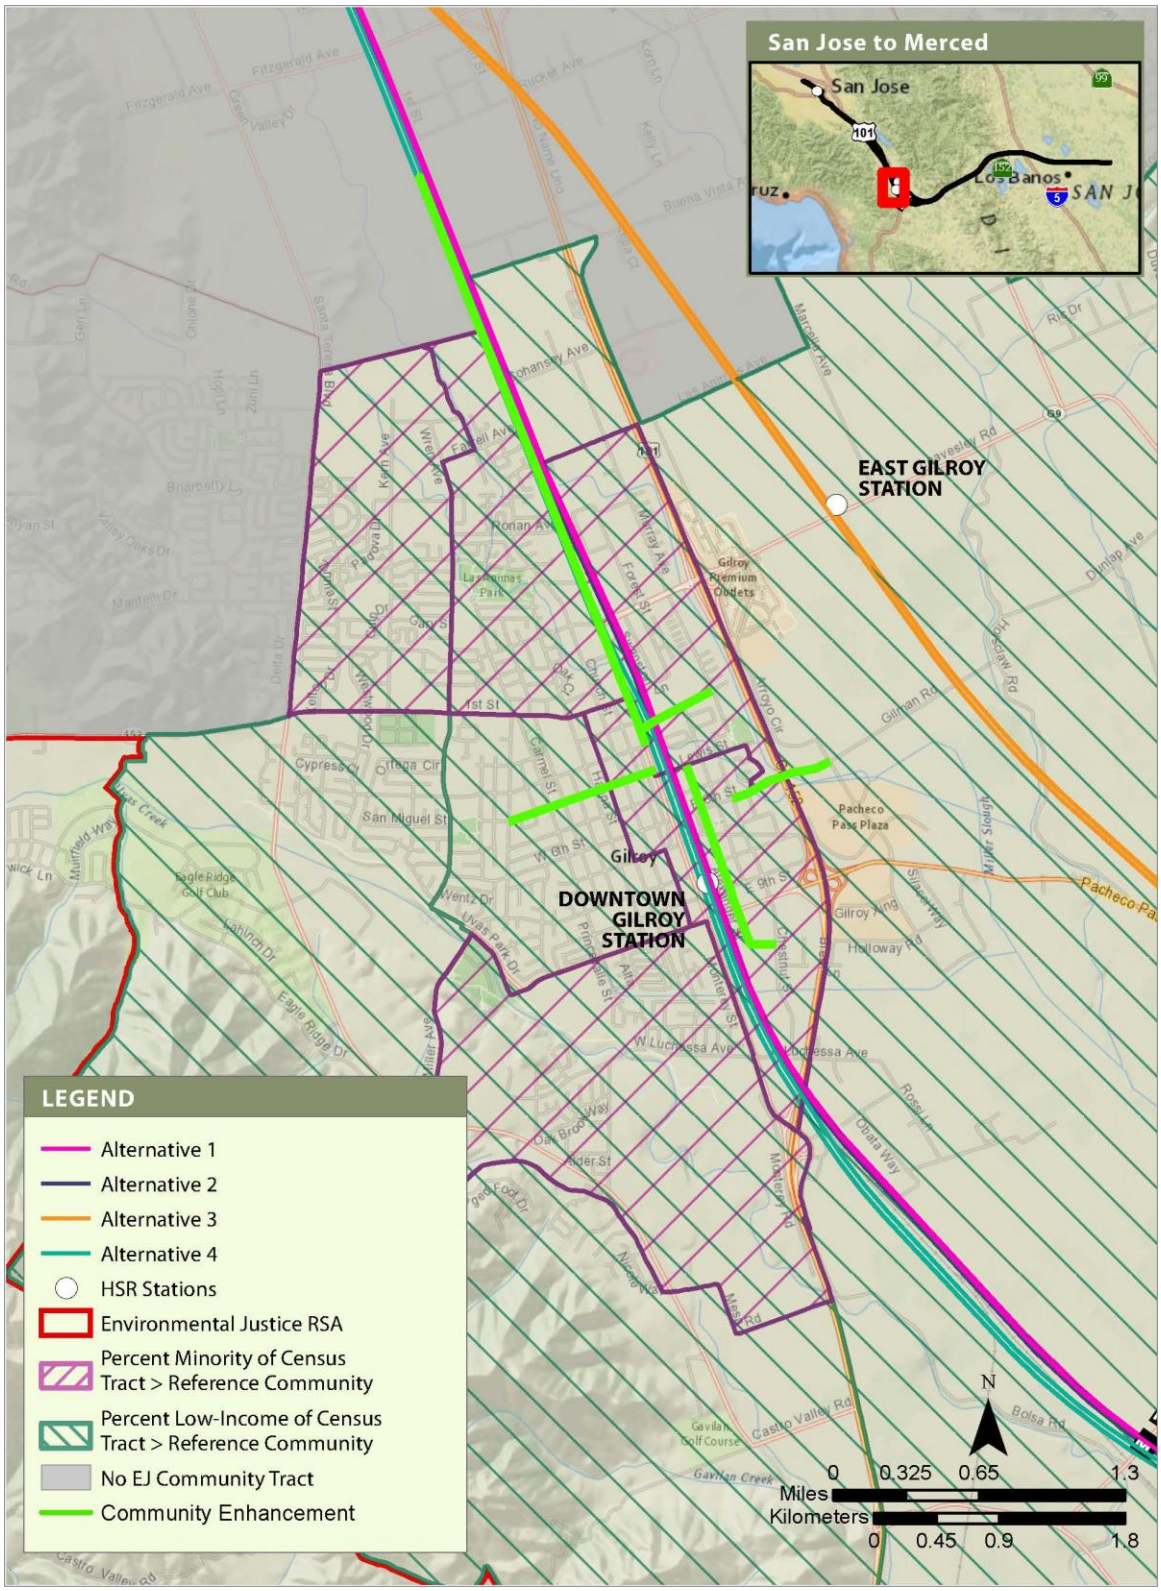


Figure G-2 Bikeway Improvements (IOOF Avenue, Monterey Road, 6th Street, 4th Street, and Alexander Street) Gilroy

28. OFFSETTING MITIGATION MEASURE G-OMM#3: NEIGHBORHOOD STREET LIGHTING

COMMUNITY: GILROY

ALTERNATIVE: 4

Measure Description

The proposed offsetting mitigation measure will install new streetlights in areas where the streetlights do not currently meet the City of Gilroy's minimum standards for streetlight spacing. The measure will provide much-needed safety and quality of life improvements.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAEs) on low-income populations related to emergency vehicle response delay. Under Alternative 4, there would be residual safety effects associated with emergency vehicle response delay that would affect several locations with low-income populations after the application of project mitigation and consideration of project benefits. DHAEs would be related to safety conditions in Gilroy under Alternative 4. While the proposed improvement will not directly address emergency response delay resulting from the project, it will provide a related safety offset with a nexus to the emergency response vehicle delay DHAE in the same community where effects would occur.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The offsetting mitigation measure will benefit the community's minority residents and low-income residents by implementing safety and quality of life improvements (Figure G-3).

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development (HUD) administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. A Neighborhood Revitalization Strategy Area (NRSA) is an area targeted for revitalization by improvements funded through the CDBG Program, which funds local community development efforts to provide affordable housing, reduce poverty, and enhance local infrastructure. The proposed Neighborhood Street Lighting Project is located within the City of Gilroy's NRSA, an area of both low-income concentration and minority concentration that needs higher levels of investment to meet the needs of the community. The proposed offsetting mitigation measure is consistent with the following policy from the *Gilroy 2040 General Plan*:

- Policy 3.27, Downtown Pedestrian Environment: Encourage and/or undertake design improvements in the Downtown area to create a safe, convenient, and pleasant pedestrian environment. Improvement—on an area-wide or project-specific basis—might include pedestrian-oriented amenities such as lighting, wider sidewalks, clearly marked pedestrian crossings, benches, landscaping, signage, and sidewalk seating areas. Design and manage

roadway and pedestrian facilities to reduce conflicts between automobiles, pedestrians, and bicyclists.

In addition, the proposed offsetting mitigation measure is consistent with the Gilroy City Council goal of ensuring that neighborhoods benefit equally from City services.

Community Outreach Input and Relationship to DHAEs

Community outreach input provided by the City of Gilroy indicated a need for new streetlights in areas of the City where streetlights do not meet the City's minimum standards. This neighborhood currently has inadequate lighting and is on the east side of the railroad right-of-way, which would be further separated from the downtown commercial and residential areas with implementation of the preferred project alignment.

This offsetting mitigation measure will provide improved safety and quality of life for Gilroy residents in targeted areas. Because the HSR alignment would travel through developed areas of Gilroy (including downtown Gilroy), and the community would experience residual safety effects under Alternative 4, this offsetting mitigation measure will apply under Alternative 4.

Improvement Cost Estimate

The cost of the neighborhood streetlighting project is approximately $250,000, including the design and construction costs, as well as construction management and inspection, and contingencies.

Roles and Responsibilities

The City of Gilroy receives CDBG funding to implement projects that benefit the City's minority neighborhoods and low-income neighborhoods. The City of Gilroy could partner with the California High-Speed Rail Authority (Authority) to implement this project and could seek to combine CDBG funds with funding provided by the Authority.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this offsetting mitigation measure.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This offsetting mitigation measure will enhance safety and quality of life in Gilroy neighborhoods generally.
Relative Number of Beneficiaries	12	Benefits will apply to neighborhoods generally.
Practicable	15	This offsetting mitigation measure can be funded and constructed.
Defined Project or Action	10	The City has defined the improvements; the locations are to be determined.
Satisfy Authority Obligations	15	The offsetting mitigation measure will provide safety, aesthetics, and quality of life benefits to neighborhoods directly and indirectly affected by the HSR project.
Defined Roles and Responsibilities	15	The Authority will provide funding. The City of Gilroy would implement.
Evidence of Agreement	15	The community improvement is a priority for the City.
Cost-Effectiveness	15	The cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	112	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

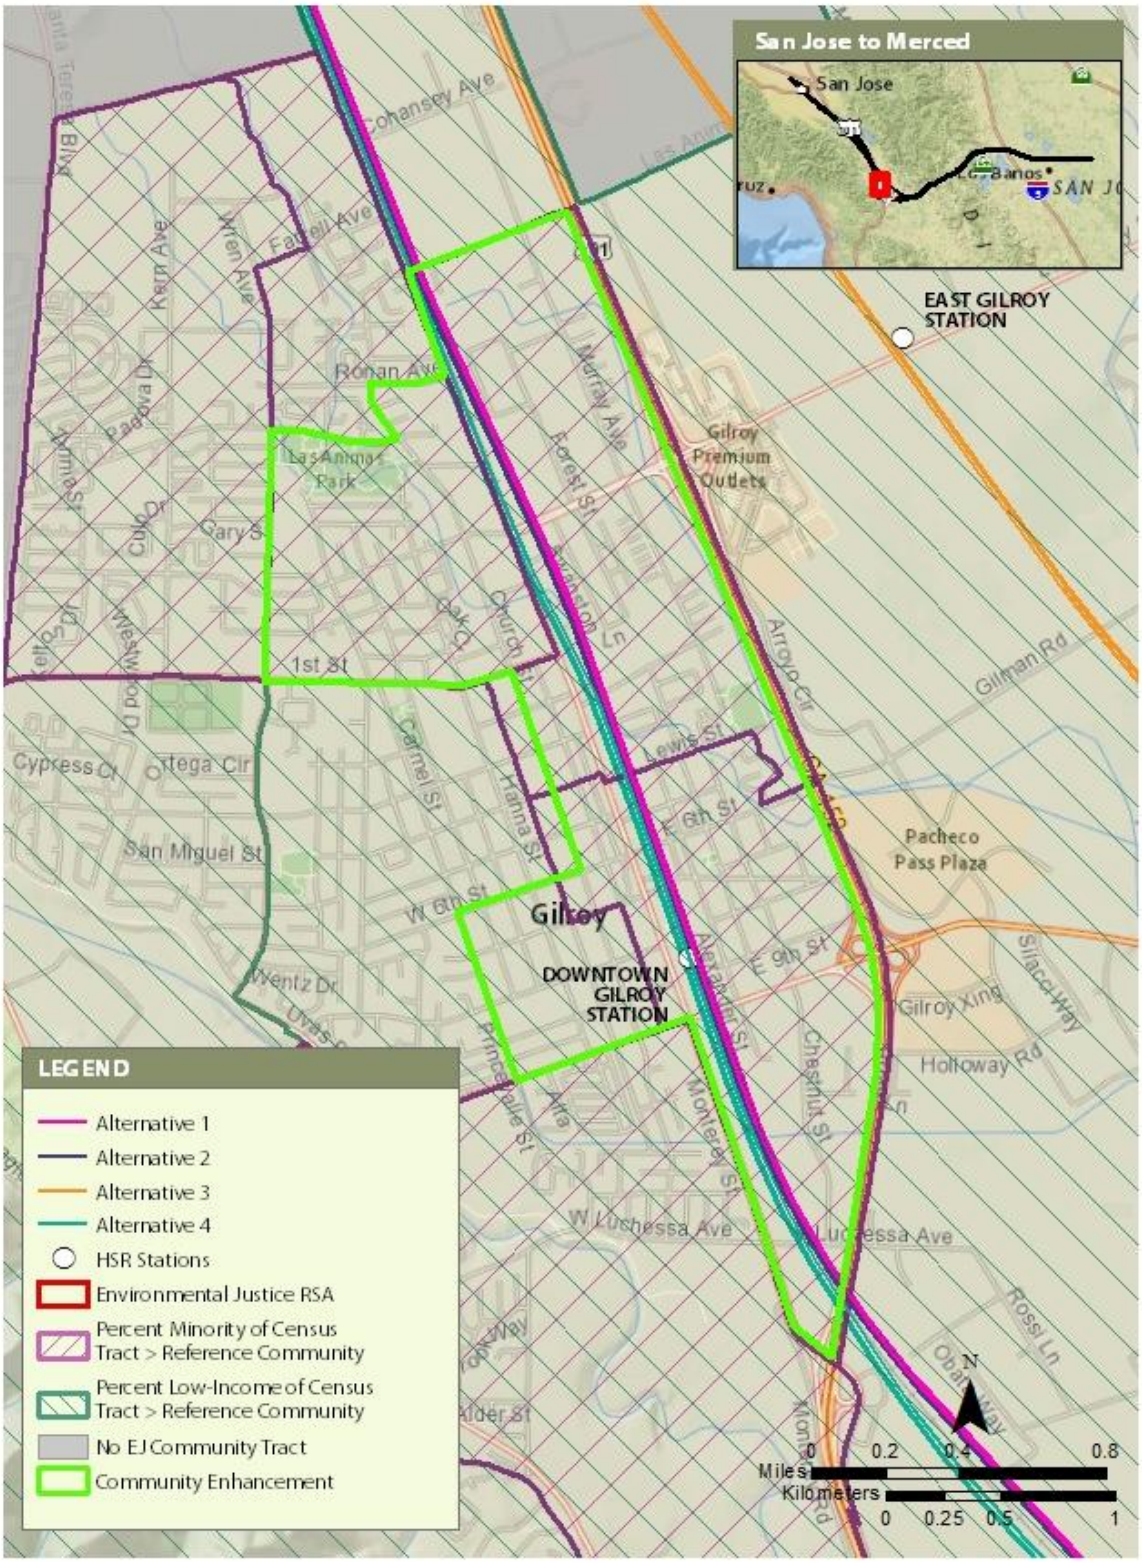

Figure G-3 Neighborhood Street Lighting Improvement Area

29. OFFSETTING MITIGATION MEASURE G-OMM#4: MURRAY AVENUE SIDEWALK GAP CLOSURE PROJECT

COMMUNITY: GILROY

ALTERNATIVE: 4

Measure Description

The proposed offsetting mitigation measure will construct approximately 2,000 linear feet of sidewalk on the west side of Murray Avenue between Kishimura Drive and Leavesley Road. The measure will promote the safety of residents and businesses on this segment of road by completing the pedestrian network and providing continuous pedestrian access.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAEs) on low-income populations related to emergency vehicle response delay. Under Alternative 4, there would be residual safety effects related to emergency vehicle response times that would affect several locations with low-income populations after the application of project mitigation and consideration of project benefits. DHAEs would be related to safety conditions in Gilroy under Alternative 4. While the proposed improvement will not directly address emergency response delay resulting from the project, it will provide a related safety offset with a nexus to the emergency response vehicle delay DHAE in the same community where effects would occur.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The Murray Avenue Sidewalk Gap Closure Project will benefit the community's minority populations and low-income populations by providing safety, connectivity, community cohesion, and accessibility improvements. The location of the proposed offsetting mitigation measure relative to the HSR alignment within the Gilroy community is shown graphically in Figure G-4.

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development (HUD) administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. A Neighborhood Revitalization Strategy Area (NRSA) is an area targeted for revitalization by improvements funded through the CDBG Program, which funds local community development efforts to provide affordable housing, reduce poverty, and enhance local infrastructure. The proposed Murray Avenue Sidewalk Gap Closure Project is located within the City of Gilroy's NRSA, an area of both minority concentration and low-income concentration that needs higher levels of investment to meet the needs of the community. The purpose of this project is to provide safety improvements on a specific segment of Murray Avenue within the City of Gilroy to enhance pedestrian safety and accessibility. Additionally, the proposed offsetting mitigation measure is consistent with the following *Gilroy 2040 General Plan* goals and policies:

- Goal 14, Bicycle and Pedestrian Circulation: Bicycling and walking as significant transportation modes, promoting personal health and recreational enjoyment while minimizing energy consumption and environmental degradation.
  - Policy 14.03, Bicycle and Pedestrian Paths and Facilities: Correct deficiencies, expand existing facilities, and provide for the design of safer, convenient and attractive bicycle and pedestrian facilities whenever possible. Proposed roadways will be planned to accommodate bicycle traffic in accordance with the bikeway designations set forth in the City's Bicycle Transportation Plan. Similarly, greenbelts, linear parks, public easements and drainages reserved in public open space will be planned to accommodate bike and pedestrian traffic if they are so designed in the Bicycle Transportation plan.

This community improvement is proposed to be included in the City's 5-year Capital Improvement Program.

Community Outreach Input and Relationship to DHAEs

Community outreach input provided by City of Gilroy staff indicated the need for sidewalk gap closures on Murray Avenue so that pedestrian access will be provided on both sides of the street.

This offsetting mitigation measure will provide improved safety, connectivity, community cohesion, and access for Gilroy residents in this area. Because the HSR alignment would travel through developed areas of Gilroy (including downtown Gilroy), and the community would experience residual safety effects under Alternative 4, this offsetting mitigation measure will apply under Alternative 4.

Improvement Cost Estimate

It is estimated that the improvement total cost would be approximately $1,235,000. Future additional development costs may be incorporated as the project scope is refined and completed.

Roles and Responsibilities

The City of Gilroy receives CDBG funding to implement projects that benefit the City's minority neighborhoods and low-income neighborhoods. The City of Gilroy could partner with the California High-Speed Rail Authority (Authority) in implementing this project and may be able to combine CDBG funds with funding provided by the Authority.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this offsetting mitigation measure.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This offsetting mitigation measure will provide some safety improvement for the local neighborhood for pedestrians.
Relative Number of Beneficiaries	6	This offsetting mitigation measure will benefit one neighborhood but not the entire community.
Practicable	15	This offsetting mitigation measure can be funded and constructed.
Defined Project or Action	15	The City has defined the improvements.
Satisfy Authority Obligations	15	This offsetting mitigation measure will increase safety and access for a neighborhood adjacent to the HSR alignment and in a location with utility upgrades for the HSR project.
Defined Roles and Responsibilities	15	The Authority will fund. The City of Gilroy would implement.
Evidence of Agreement	15	The City is in support.
Cost-Effectiveness	12	The cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	108	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

Figure G-4 Murray Avenue Sidewalk Gap Closure Project Gilroy

30. OFFSETTING MITIGATION MEASURE G-OMM#5: IOOF AVENUE BICYCLE AND PEDESTRIAN OVERCROSSING AND COMPLETE STREETS

COMMUNITY: GILROY

ALTERNATIVE: 4

Measure Description

The offsetting mitigation measure includes a bicycle and pedestrian overcrossing at IOOF Avenue as well as additional complete street improvements, such as high visibility crosswalks, Americans with Disability Act (ADA) curb ramps, Class II bike lanes, and rectangular rapid flashing beacons on IOOF Avenue in the vicinity of Gilroy Prep School, South Valley Middle School, and Rebekah Children's Services.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionate, high, and adverse effects (DHAEs) on low-income populations related to emergency vehicle response delay, as there would be residual safety effects that would affect several locations with low-income populations after the application of project mitigation and consideration of project benefits. DHAEs would be related to safety conditions in Gilroy under Alternative 4. While the proposed improvement will not directly address emergency response delay resulting from the project, it will provide a related safety offset with a nexus to the emergency response vehicle delay DHAE in the same community where effects would occur.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community.

The proposed offsetting mitigation measure under Alternative 4 will benefit the community's low-income populations and minority populations by providing safety, accessibility, connectivity, and community cohesion improvements on IOOF Avenue in the vicinity of South Valley Middle School and Gilroy Prep School (a public charter school), both of which serve primarily Hispanic/Latino students; Rebekah Children's Services, which serves minority children and families and low-income children and families in Gilroy; and the neighborhood between US 101 and Monterey Road. The offsetting mitigation measure also could provide health benefits by providing multi-modal transportation options. The location of the proposed offsetting mitigation measure relative to the HSR alignment within the Gilroy community is shown graphically in Figure G-5.

Consistency with Community Goals and Planning

South Valley Middle School, the Gilroy Prep School, and Rebekah Children's Services are in the City of Gilroy's Neighborhood Revitalization Strategy Area (NRSA), an area targeted for revitalization by improvements funded through the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. The U.S. Department of Housing and Urban Development (HUD) administers the Community Development Block Grant (CDBG) Program, which funds local community development efforts to provide affordable housing, reduce poverty, and enhance local infrastructure. The NSRA is an area of both minority concentration and low-income concentration that needs higher levels of investment

to meet the needs of the community. The proposed offsetting mitigation measure will be consistent with the following *Gilroy 2040 General Plan* goals and policies:

- Goal 14, Bicycle and Pedestrian Circulation: Bicycling and walking as significant transportation modes, promoting personal health and recreational enjoyment while minimizing energy consumption and environmental degradation.
  - Policy 14.03, Bicycle and Pedestrian Paths and Facilities: Correct deficiencies, expand existing facilities, and provide for the design of safer, convenient and attractive bicycle and pedestrian facilities whenever possible. Proposed roadways will be planned to accommodate bicycle traffic in accordance with the bikeway designations set forth in the City's Bicycle Transportation Plan. Similarly, greenbelts, linear parks, public easements and drainages reserved in public open space will be planned to accommodate bike and pedestrian traffic if they are so designed in the Bicycle Transportation plan.
  - Policy 14.04, Crossings: Design street crossings to provide for the safety needs of bicyclists and pedestrians. River and other crossing by bridges will be designed to accommodate bike lanes or paths in accordance with the designations set forth in the Bicycle Transportation Plan. Bridges for the exclusive use of pedestrians and bicycles should be considered whenever barriers exist which impede convenient and safe access.

In addition, the proposed offsetting mitigation measure will also be consistent with the goals of the City's Safe Routes to Schools project, which seeks to promote, educate, and encourage safe walking and bicycling practices for schoolchildren and residents of every ability within the City of Gilroy.

Community Outreach Input and Relationship to DHAEs

Community outreach input provided by South Valley Middle School, Gilroy Prep School, and Rebekah Children's Services Center indicated the need for a bicycle/pedestrian overcrossing at IOOF Avenue to enhance student safety.

This offsetting mitigation measure will provide safety, accessibility, community cohesion, and connectivity for students at these schools along with other Gilroy residents. Because the HSR alignment would travel through developed areas of Gilroy (including downtown Gilroy) and the community would experience residual safety effects under Alternative 4, this offsetting mitigation measure will apply under Alternative 4.

Improvement Cost Estimate

It is estimated that the project total cost would be approximately $13.2 million.

Roles and Responsibilities

The City of Gilroy receives CDBG funding to implement projects that benefit the City's minority neighborhoods and low-income neighborhoods. The City could partner with the California High-Speed Rail Authority (Authority) to implement this project and could seek to combine CDBG funds with funding provided by the Authority.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this offsetting mitigation measure.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This offsetting mitigation measure will improve access and provide for a safe route to two schools and RCS and the adjacent neighborhood, which would be affected by the HSR project and involve minority populations and low-income populations.
Relative Number of Beneficiaries	15	This offsetting mitigation measure will benefit students, parents, faculty, RCS staff and clients, and the adjacent neighborhood.
Practicable	15	This offsetting mitigation measure could be funded and constructed. The City of Gilroy would need to fund ongoing maintenance.
Defined Project or Action	10	Improvements are defined but will require further design.
Satisfy Authority Obligations	15	The offsetting mitigation measure will provide safety and access improvements to a community affected by the project.
Defined Roles and Responsibilities	10	The Authority will provide funding and right-of-way coordination (working with Union Pacific Railroad). The City of Gilroy would implement and maintain.
Evidence of Agreement	15	Priority for Gilroy Unified School District (South Valley Middle School, Gilroy Prep School), RCS, and City of Gilroy.
Cost-Effectiveness	9	Cost is somewhat high relative to the estimated number of beneficiaries.
TOTAL SCORE	104	

Authority = California High-Speed Rail Authority; HSR = high-speed rail; RCS = Rebekah Children's Services.

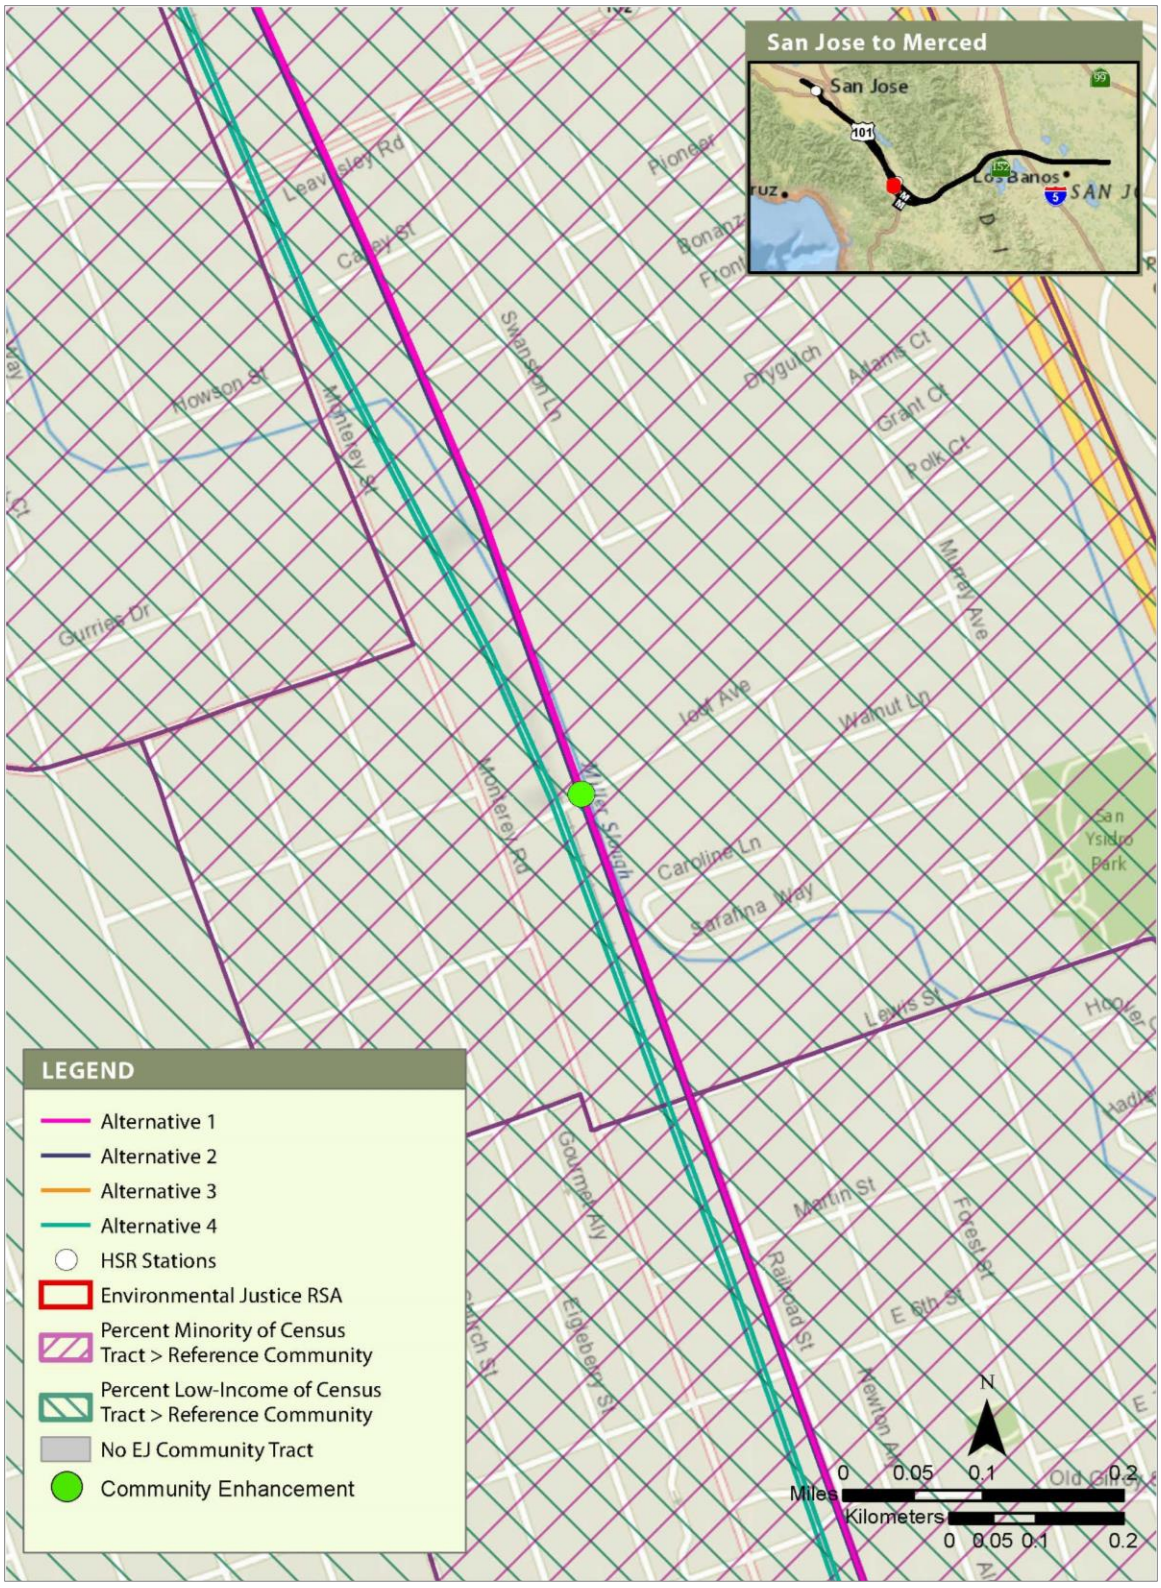

Figure G-5 IOOF Avenue Bicycle and Pedestrian Overcrossing and Complete Streets Gilroy

31. OFFSETTING MITIGATION MEASURE G-OMM#6: NOISE REDUCTION PROGRAM

COMMUNITY: GILROY

ALTERNATIVES: 1, 2, 4

Measure Description

The proposed offsetting mitigation measure will upgrade existing residential structures to improve noise attenuation along US 101 to promote a healthier community and improve the quality of life in the neighborhood. Residences in Gilroy are adjacent to the west side of US 101 from south of Las Animas Avenue to Leavesley Road, from Adams Court to San Ysidro Park, and from San Ysidro Park to north of East 7th Street.

The proposed offsetting mitigation measure will provide resources to implement one of these options:

- Provide resources to retrofit homes with noise reduction features, including upgraded windows and insulation, or
- Pursue construction of sound walls between US 101 and adjacent residential neighborhoods.

Nexus to Disproportionately High and Adverse Effects

All four project alternatives would result in disproportionately high and adverse effects (DHAEs) on low-income populations related to the project's operational noise impacts after the consideration of mitigation and project benefits. Alternatives 1, 2, and 4 would extend through downtown Gilroy, where there would be residual severe noise impacts after the application of proposed noise barrier mitigation. DHAEs would be related to project-generated noise levels above existing ambient levels because of train operations. With noise barrier mitigation, Alternative 1 would have 7 severe noise impacts, Alternative 2 would have 10 severe noise impacts, and Alternative 4 would have 46 severe noise impacts. With noise barrier mitigation and quiet zone implementation, impacts with Alternatives 1 and 2 would have the same impacts as with noise barriers alone and Alternative 4 would have 16 severe noise impacts, but quiet zone implementation can only be done by local jurisdictions, so is not guaranteed. While the proposed improvement will not directly address operational noise effects resulting from the project, it will provide a related offset representing an investment in community noise reduction at sensitive receptors that already experience traffic noise from US 101. The improvement will reduce noise levels in the same community affected by project noise.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The proposed offsetting mitigation measure will benefit the community's minority populations and low-income populations by providing health and livability improvements (Figure G-6).

Consistency with Community Goals and Planning

The proposed improvement will be consistent with the following goals and policies from the *Gilroy 2040 General Plan:*

- Goal H-3, Housing Preservation and Rehabilitation. Maintain and conserve the existing stock in a sound, safe, and sanitary condition.
  - Policy H-3.1: The City shall promote the maintenance and rehabilitation of structures in poor condition and take cation to prevent poorly maintained properties from further deterioration.

- Policy 21.01, “Sensitive Receptors.” Use land use planning and project siting to separate air pollution sources (such as freeways, arterials, industrials sites, etc.) from residential areas and other “sensitive receptors” (such as schools, hospitals, and nursing homes) that would be adversely affected by close proximity to air pollutants.
- Noise Goal: Protection of Gilroy residents from exposure to excessive noise and its effects through appropriate mitigation measures and responsive land use planning, especially regarding noise-sensitive land uses such as schools, hospitals, and housing for seniors.

In addition, the improvement is consistent with the Gilroy City Council goal of ensuring that neighborhoods benefit equally from City services.

Community Input and Relationship to DHAE

Community input provided by the City of Gilroy indicated the need to provide upgrades to existing residential structures to improve noise attenuation, particularly along the US 101 corridor.

This improvement will improve the health and quality of life for Gilroy residents in targeted areas. Because the HSR alignment would travel through developed areas of Gilroy (including downtown) under Alternatives 1, 2, and 4, residents in this area would experience various project effects under these project alternatives. Therefore, this improvement will apply under Alternatives 1, 2, and 4.

Improvement Cost Estimate

The preliminary cost estimate is based on the lesser cost of implementation of one of these two options:

- Cost of retrofitting the first two single-family or multifamily residences along the west side of US 101 in the areas noted above. The cost of retrofitting individual homes is based on an estimated $12,500 per single-family home and $25,000 per multifamily building. Based on aerial photography, there are an estimated 59 single-family homes and 36 multifamily homes in the areas noted above, which would result in an estimated retrofit cost of $1.637 million if all were done. However, as noted above, Alternative 1 would have up to 7 severe noise impacts, Alternative 2 would have up to 10 severe noise impacts, and Alternative 4 would have up to 46 severe noise impacts. Thus, this measure will only require an equivalent amount of noise abatement proportionate to the impact. Assuming all abatement is to multifamily homes, then this measure could cost up to $175,000 (Alternative 1), $250,000 (Alternative 2), or $1.15 million (Alternative 4).
- Sound walls along US 101 where residences are present adjacent to the west side of the freeway in the areas noted above. The cost of sound walls is based on a unit cost of $70 per square foot (from the Final EIR/EIS, Volume 2, Appendix 3.4-B), assumed sound wall height of 14 feet, and an estimated 5,800 linear feet of sound walls—for a total cost of $5.7 million.

Based on these estimates, retrofitting individual homes would be more cost-effective than constructing sound walls.

Roles and Responsibilities

The City of Gilroy receives CDBG funding to implement projects that benefit the City’s minority neighborhoods and low-income neighborhoods. The City of Gilroy could partner with the California High-Speed Rail Authority (Authority) to implement this improvement and could seek to combine CDBG funds with funding provided by the Authority.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this offsetting mitigation measure.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Individual residents will receive substantial benefit.
Relative Number of Beneficiaries	12	The offsetting mitigation measure will benefit individual minority residents and low-income residents but will not benefit the entire community.
Practicable	15	Funding for this offsetting mitigation measure is practicable.
Defined Project or Action	10	The Authority will provide funding to a program for the subject residents/owners for the individual house retrofits to windows and insulation.
Satisfy Authority Obligations	10	Offsetting mitigation measure will provide community uplift and recreation benefits. The HSR project would result in noise effects, so there is a general nexus (although the benefitted homes would not be affected by HSR noise). However, the benefitted homes are not adjacent to the HSR alignments, so the beneficiaries would not be the most affected by the project.
Defined Roles and Responsibilities	10	The Authority will provide funding. The City of Gilroy would implement.
Evidence of Agreement	15	The community improvement is a priority for the City.
Cost-Effectiveness	12	The cost is low relative to estimated number of beneficiaries.
TOTAL SCORE	99	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

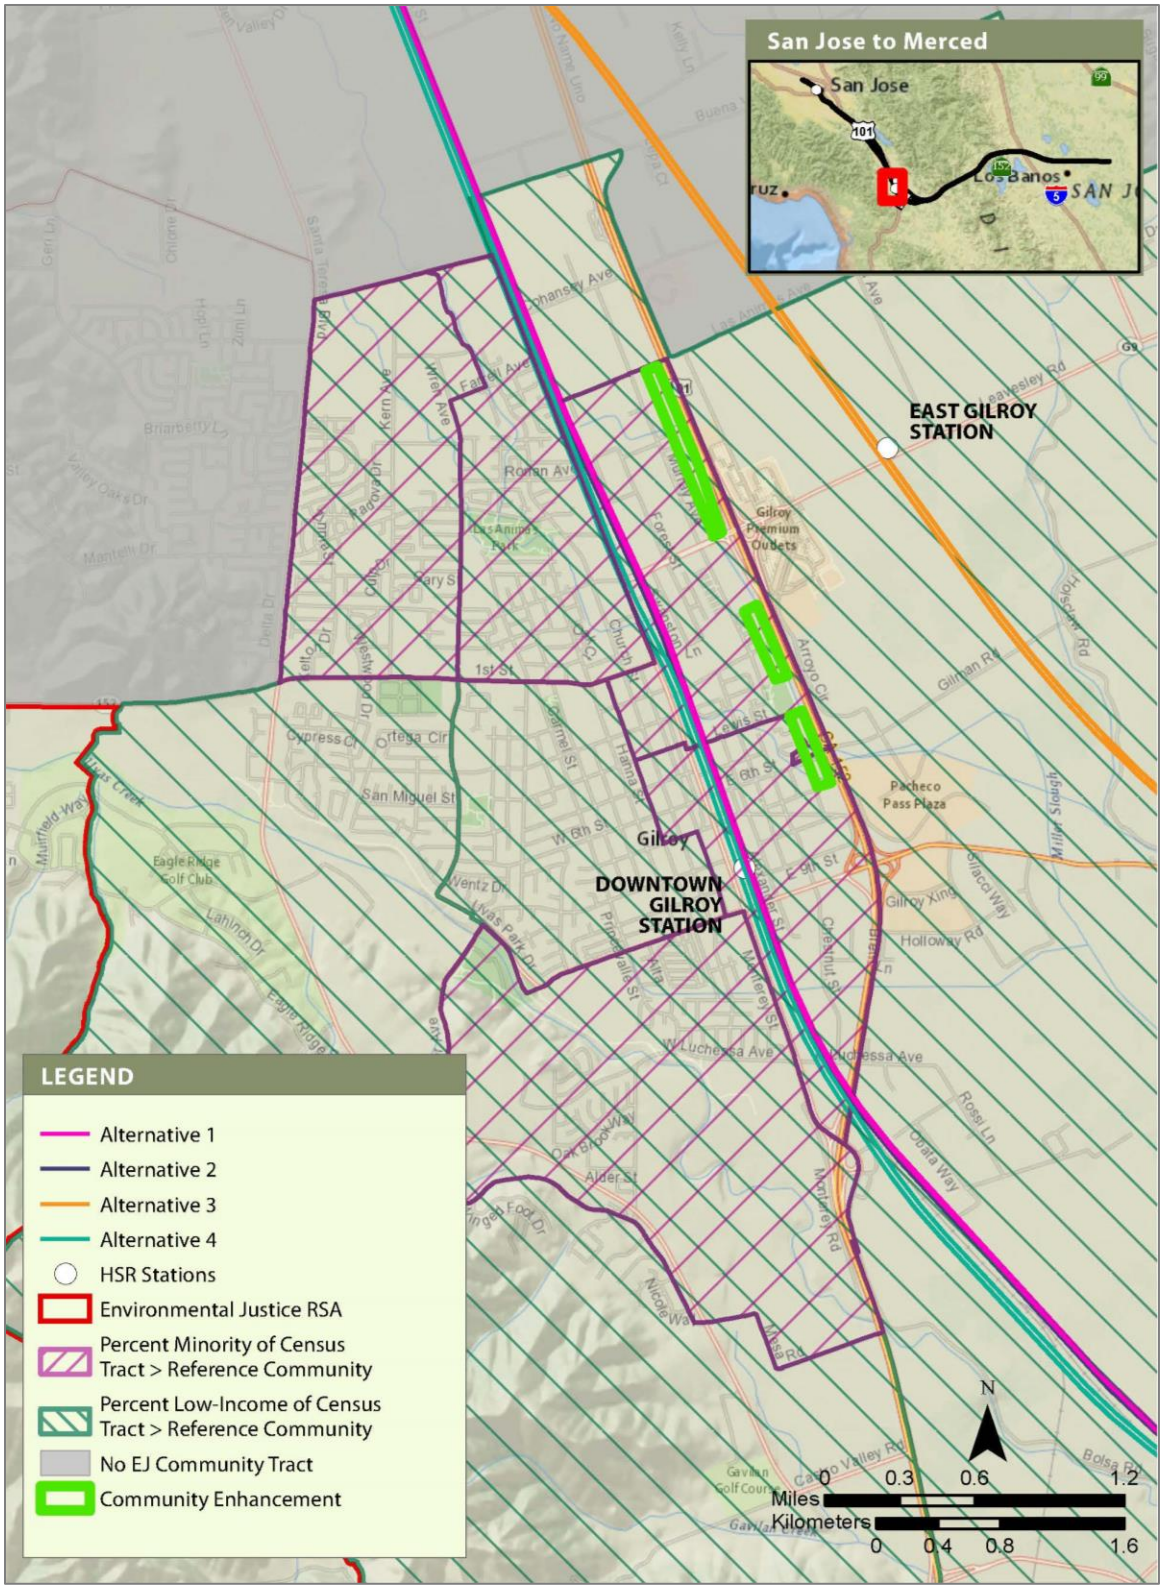

Figure G-6 Noise Reduction Program Gilroy

32. OFFSETTING MITIGATION MEASURE G-OMM#7: SOUTH VALLEY MIDDLE SCHOOL RECREATIONAL AMENITIES

COMMUNITY: GILROY

ALTERNATIVE: 2

Measure Description

The proposed offsetting mitigation measure will improve and modernize the existing South Valley Middle School related to recreational facilities in accordance with the Gilroy Unified School District's (GUSD) Measure E, which was passed in June 2016, and is a measure to issue bonds to fund school renovation and construction. Modernization of the middle school was slated to begin once the measure was passed; however, due to the uncertainty of the high-speed rail (HSR) project design at the time and its potential impact on the middle school, the modernization was delayed. The modernization project is currently in the design phase, and GUSD expects to have completed a substantial modernization of the campus by the end of 2023. Additional funding provided for this offsetting mitigation measure will help fill future buildout needs identified by GUSD during the design phase.

The existing middle school is outdated, and many aspects of the school need repair or replacement, such as the HVAC system, damaged ceilings and walls, the fire system, worn and aged roofs that are leaking, locker rooms that currently lack hot water, and grass fields needing renovations. The existing middle school needs many improvements to provide a quality education to its students, including many minority students and low-income students. Many of the required improvements, including construction of a new gym, a new multipurpose unit, parking lots, and sports fields, would be completed by the GUSD before California High-Speed Rail Authority (Authority) funding available. Additional future buildout needs included in this offsetting mitigation measure could include a community pool or other recreational amenities that will benefit both the school and the entire community. The pool would be separate from the campus, with its own parking lot and secured entrance, allowing it to be open to the public for recreational purposes even when school is not in session.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 2, permanent acquisition of approximately 12 percent of the South Valley Middle School play area and track would preclude the use of the resource or result in diminished capacity for use. Since the South Valley Middle School is in a minority area and low-income area, the diminishment of play function would result in disproportionately high and adverse effects (DHAEs). The provision of funding for additional recreational amenities at South Valley Middle School will not directly address residual impacts related to the loss of a portion of the school's play area and track but will provide enhanced recreational resources for the students and the public.

Benefit to Minority Populations and/or Low-Income Populations

The HSR alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The offsetting mitigation measure will benefit the City's minority community and low-income community by providing educational, recreational, and community livability improvements. The

location of the proposed offsetting mitigation measure relative to the HSR alignment within the Gilroy community is shown graphically in Figure G-7.

Consistency with Community Goals and Planning

The US Department of Housing and Urban Development (HUD) administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. A Neighborhood Revitalization Strategy Area (NRSA) is an area targeted for revitalization by improvements funded through the CDBG Program, which funds local community development efforts to provide affordable housing, reduce poverty, and enhance local infrastructure. The proposed South Valley Middle School Recreational Amenities project is located within the City of Gilroy's NRSA, an area of both minority concentration and low-income concentration that needs higher levels of investment to meet the needs of the community. The proposed offsetting mitigation measure is consistent with the following goals and policies from the *Gilroy 2040 General Plan*:

- Goal 17, Educational Facilities: Coordination between new residential development and the development of new educational facilities; educational excellence in support of community and economic development; and community improvement of the role of schools as a community resource.
  - Policy 17.06, School Sites: Coordinate and provide high quality school sites (based on size, location, and terrain) to optimize educational goals. In areas of new residential development, ensure that sites are identified and dedicated as a condition of development approval, incorporated as part of the Neighborhood District planning process whenever feasible. Site location considerations include adjacency to planned open space corridors, neighborhood park sites, and bike and pedestrian pathways.

In addition, the proposed offsetting mitigation measure is consistent with the Gilroy City Council goal of ensuring that neighborhoods benefit equally from City services.

Community Outreach Input and Relationship to DHAE

Community outreach input from the Gilroy Unified School District indicated concern about the delay in implementation of planned improvements at South Valley Middle School due to construction of the HSR project. These improvements are needed to enhance the educational and recreational experience of the school's students and to improve the school as a community resource, thus providing improved livability.

This offsetting mitigation measure will provide funding for needed improvements to the school to update and enhance educational and recreational facilities. Because Alternative 2 would permanently acquire approximately 12 percent of the South Valley Middle School play area and track, resulting in the diminished capacity for use of this recreational resource, this offsetting mitigation measure will apply to Alternative 2.

Improvement Cost Estimate

Modernization of South Valley Middle School, including contingency and soft costs, would cost approximately $90 million, based on a GUSD estimate. This offsetting mitigation measure would include a partial funding contribution by the Authority to GUSD's ongoing modernization effort. Funding of this entire amount is disproportionate to HSR effects on schools, and thus the Authority's potential contribution is evaluated at $5 million. As noted below, GUSD has identified other sources of funding.

Roles and Responsibilities

The City of Gilroy receives CDBG funding to implement projects that benefit the City's minority neighborhoods and low-income neighborhoods. In addition, GUSD set aside approximately $90 million under Measure E (General Obligation Bonds) to modernize the South Valley Middle School. The City of Gilroy could partner with the Authority and the School District in implementing

this project and could seek to combine CDBG funds, as well as GUSD funds received from Measure E, with funding provided by the Authority.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this offsetting mitigation measure.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This offsetting mitigation measure will improve a school serving local neighborhoods and minority populations and low-income populations.
Relative Number of Beneficiaries	15	This offsetting mitigation measure will benefit students in an affected neighborhood but will only benefit students directly.
Practicable	15	This offsetting mitigation measure could be funded and constructed.
Defined Project or Action	10	Improvements are defined but will require further design.
Satisfy Authority Obligations	15	The offsetting mitigation measure will provide educational, safety, and community benefits for a school and neighborhoods directly affected by the HSR project. In addition, uncertainty about HSR design has resulted in a delay of implementation of the modernization.
Defined Roles and Responsibilities	15	The Authority will provide funding. GUSD would implement.
Evidence of Agreement	15	GUSD opposes Alternative 2 and supports Alternative 4 but has long-term modernization needs, and, if Alternative 2 were advanced and track/field effects cannot be avoided, then additional recreational funding will help the school in its mission.
Cost-Effectiveness	9	This community improvement is a priority for GUSD.
TOTAL SCORE	109	

Authority = California High-Speed Rail Authority; GUSD = Gilroy Unified School District; HSR = high-speed rail.

Figure G-7 South Valley Middle School Recreational Amenities Gilroy

33. OFFSETTING MITIGATION MEASURE G-OMM#8: REBEKAH CHILDREN'S SERVICES CENTER PERIMETER FENCE

COMMUNITY: GILROY

ALTERNATIVE: 4

Proposed Improvement

The proposed improvement will install fencing around the perimeter of the Rebekah Children's Services (RCS) facility. The existing services center is a crucial community resource for the City of Gilroy and larger Santa Clara County.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 4, the project would result in disproportionately high and adverse effects (DHAEs) on low-income populations related to emergency vehicle response delay. Under Alternative 4, there would be residual safety effects related to emergency vehicle response times that would affect several locations with low-income populations after the application of project mitigation and consideration of project benefits. DHAEs would be related to safety conditions in Gilroy under Alternative 4. While the proposed improvement will not directly address emergency response delay resulting from the project, it will provide a related safety offset with a nexus to the emergency response vehicle delay DHAE in the same community where effects would occur.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The proposed improvement will benefit the community's minority residents and low-income residents by providing safety improvements (Figure G-8).

Consistency with Community Goals and Planning

The RCS is located in the City of Gilroy's Neighborhood Revitalization Strategy Area (NRSA), an area targeted for revitalization by improvements funded through the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. The U.S. Department of Housing and Urban Development administers the CDBG Program, which funds local community development efforts to provide affordable housing, reduce poverty, and enhance local infrastructure. The NRSA is an area of both low-income concentration and minority concentration that needs higher levels of investment to meet the needs of the community. The proposed improvement will be consistent with the following *Gilroy 2040 General Plan* goals and policies:

- Goal 15, Civic and Community Facilities: Adequate, varied and high-quality public facilities and programs to meet residents' current and future needs and contribute to a high quality of life.

– Policy 15.04, Partnering: Seek opportunities to partner or form joint ventures with commercial and nonprofit organizations to facilitate the development of community facilities, programs and services.

In addition, the proposed improvement is consistent with the Gilroy City Council goal of ensuring that neighborhoods benefit equally from City services.

Community Outreach Input and Relationship to DHAEs

Community outreach input provided by the RCS identified the need for various improvements to serve youth in the Gilroy community.

This improvement will improve safety for youth served by this agency. Because the HSR alignment would travel through developed portions of Gilroy (including downtown) under Alternative 4, residents in this area would experience various project effects under this project alternative. Therefore, this improvement will apply under Alternative 4.

Improvement Cost Estimate

Assuming a perimeter fence length of 2,000 feet for northern, eastern, and southern sides (western side assumed to be sound wall), at a cost of $50 per linear foot (for wrought iron), the cost of this improvement would be approximately $100,000.

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding for RCS to implement this improvement.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This improvement will support the mission and programs of RCS, which benefit the minority populations and low-income populations of Gilroy.
Relative Number of Beneficiaries	9	The entire community will benefit due to the services provided by RCS.
Practicable	15	Funding for this improvement is practicable, and the improvements can be constructed.
Defined Project or Action	10	The improvement is reasonably defined.
Satisfy Authority Obligations	15	The improvement will provide benefits to the minority populations and low-income populations served by RCS, who would be affected by the HSR project.
Defined Roles and Responsibilities	15	The Authority will provide funding; RCS would construct and maintain improvements at the RCS facility.
Evidence of Agreement	15	RCS requested funding for a suite of improvements, one of which is perimeter fencing, and thus agreed with this improvement.

Criteria	Ranking 1–15	Justification
Cost-Effectiveness	9	The cost is somewhat high relative to estimated number of beneficiaries.
TOTAL SCORE	103	

Authority = California High-Speed Rail Authority; HSR = high-speed rail; RCS = Rebekah Children's Services.

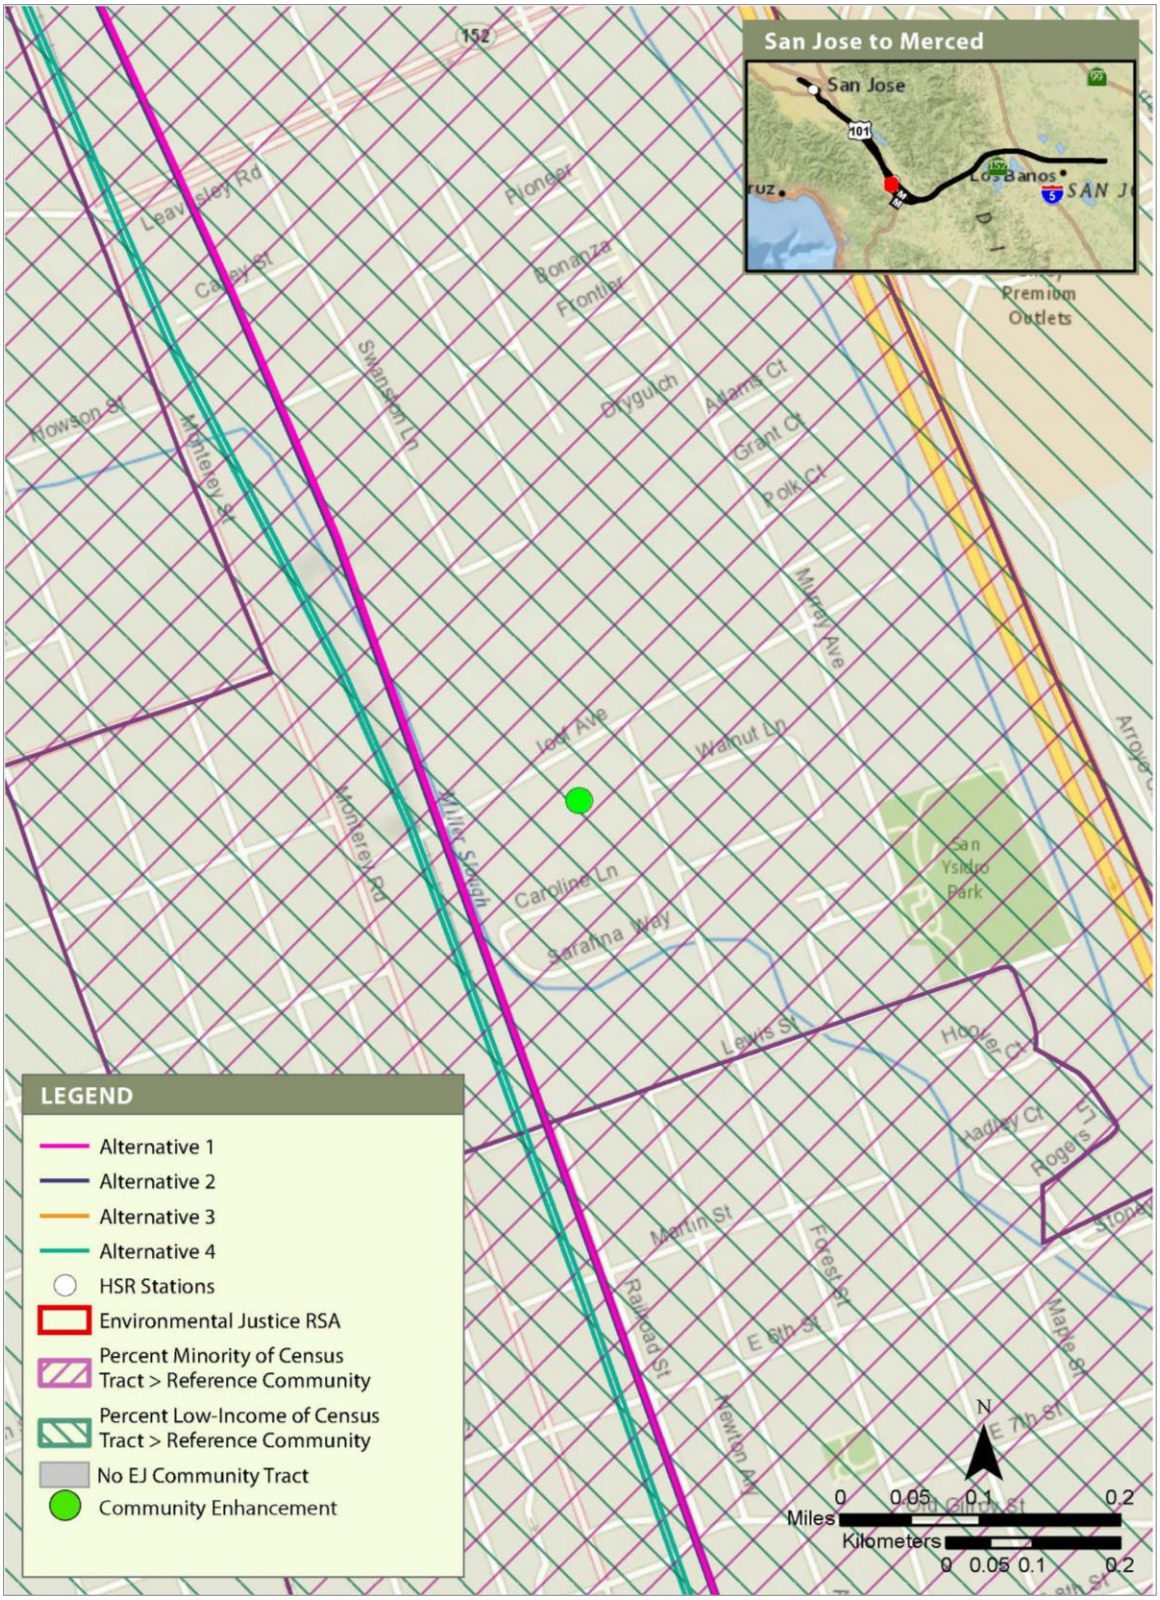

Figure G-8 Rebekah Children's Services Improvement Gilroy

34. OFFSETTING MITIGATION MEASURE G-OMM#9: SAN YSIDRO PARK ENHANCEMENTS

COMMUNITY: GILROY

ALTERNATIVES: 1, 2

Measure Description

The proposed improvement will expand San Ysidro Park's recreational amenities in accordance with the City of Gilroy's approved Parks and Recreation Master Plan, with the intent of promoting a healthier community and improving the quality of life in the neighborhood. The improvement could include new recreational features, such as new playground equipment, paved trail, welcome kiosk, distance markers on the paved trail, games etched into the sidewalk, exercise equipment, new volleyball equipment, new picnic barbeque grills, bottle filler station/ water fountain, lighting, public art, and a drought-resistant garden.

Nexus to Disproportionately High and Adverse Effects

Alternatives 1 and 2 would extend through downtown Gilroy, resulting in adverse visual aesthetic effects on minority populations and low-income populations in the downtown area related to either an elevated aerial viaduct (Alternative 1) or an elevated embankment and grade separations (Alternative 2). Alternatives 1 and 2 would result in disproportionately high and adverse effects (DHAEs) relative to visual aesthetics on an end-to-end basis. While the proposed offsetting mitigation measure will not directly address the visual effects of the elevated rail alignment, it will provide indirect aesthetic benefits by expanding and improving a park, providing additional recreational amenities, and improving the visual quality of the park site.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The proposed improvement will benefit the community's minority residents and low-income residents by providing recreational improvements within walking distance of a large residential neighborhood. Associated health, livability, and visual quality benefits also will be provided (Figure G-9).

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. A Neighborhood Revitalization Strategy Area (NRSA) is an area targeted for revitalization by improvements funded through the CDBG Program, which funds local community development efforts to provide affordable housing, reduce poverty, and enhance local infrastructure. The proposed improvement will be undertaken within the City of Gilroy's NRSA, an area of both minority concentration and low-income concentration that needs higher levels of

investment to meet the needs of the community. In addition, the proposed improvement is consistent with the following goal from the *Gilroy 2040 General Plan*:

- Goal 16, Parks and Recreation: A comprehensive and coordinated system of convenient, efficient, and high-quality park and recreation facilities to meet the current and future needs of Gilroy residents, integrating important natural features and contributing to the City's identity and livability.

In addition, this improvement is consistent with the Gilroy *Parks and Recreation System Master Plan* goal of providing safe and well-maintained parks. Furthermore, the improvement is consistent with the Gilroy City Council goal of ensuring that neighborhoods benefit equally from City services.

Community Outreach Input and Relationship to DHAEs

Community outreach input from the City of Gilroy indicated the need for a series of improvements at San Ysidro Park to enhance recreational opportunities and overall quality of life for Gilroy community residents.

This improvement will provide recreational enhancements at the park, such as those described above, as well as health benefits, improved livability for local residents, and improved visual quality at the park site. This park is located within walking distance of a residential neighborhood along the HSR alignment. Because the HSR alignment would travel through the developed areas of Gilroy (including downtown) under Alternatives 1 and 2, residents in this area would experience various project effects under these project alternatives. Therefore, this improvement will apply to Alternatives 1 and 2.

Improvement Cost Estimate

The City submitted a Proposition 68 Grant Application for approximately $3.2 million to the California Department of Parks and Recreation Office of Grants and Local Services to provide new recreation opportunities at the San Ysidro Park. The City will be notified in 2020 regarding the results of the Proposition 68 Grant. If the City receives the grant, it is estimated that an additional $500,000 would be needed for offsite improvements at the park.

Roles and Responsibilities

The City of Gilroy receives CDBG funding to implement projects that benefit the City's minority neighborhoods and low-income neighborhoods. The City of Gilroy would partner with the California High-Speed Rail Authority (Authority) to implement this improvement and would seek to combine CDBG funds and Proposition 68 Grant funds with funding provided by the Authority.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	San Ysidro Park serves the neighborhoods adjacent to the HSR alignment and the Gilroy HSR station. The improvement will improve recreational opportunities, aesthetics, and community identity.
Relative Number of Beneficiaries	6	The park will serve residents throughout downtown Gilroy who are affected by the HSR project. Parks are used by a broad cross-section of the community.

Criteria	Ranking 1–15	Justification
Practicable	15	The improvement can be funded and implemented.
Defined Project or Action	10	The City of Gilroy has defined the improvements needed; specific design to be completed.
Satisfy Authority Obligations	15	San Ysidro Park serves the neighborhoods adjacent to the HSR alignment and the Gilroy HSR station. The improvement will improve recreational opportunities, aesthetics, and community identity.
Defined Roles and Responsibilities	15	The Authority will contribute capital funding. The City of Gilroy would improve and maintain the park.
Evidence of Agreement	15	The City recommended this measure.
Cost-Effectiveness	15	The improvement is a priority for the City.
TOTAL SCORE	106	

Authority = California High-Speed Rail Authoriy; HSR = high-speed rail.

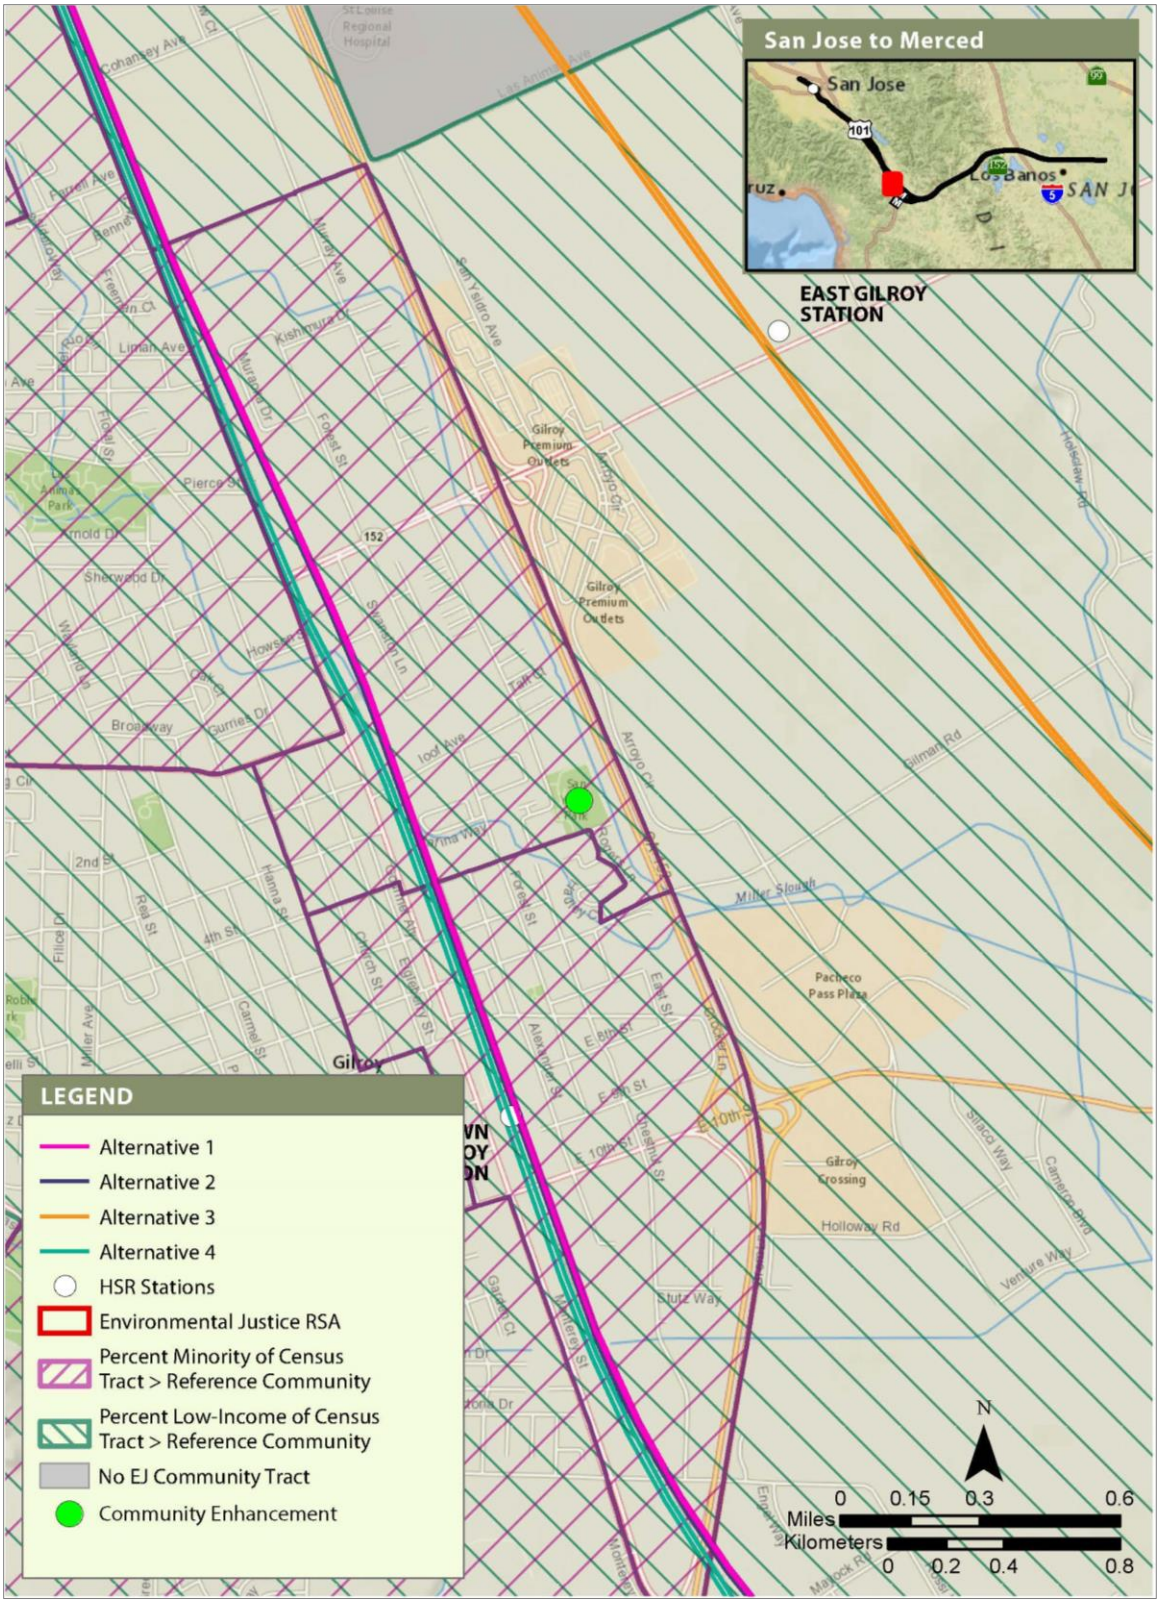

Figure G-9 San Ysidro Park Enhancements
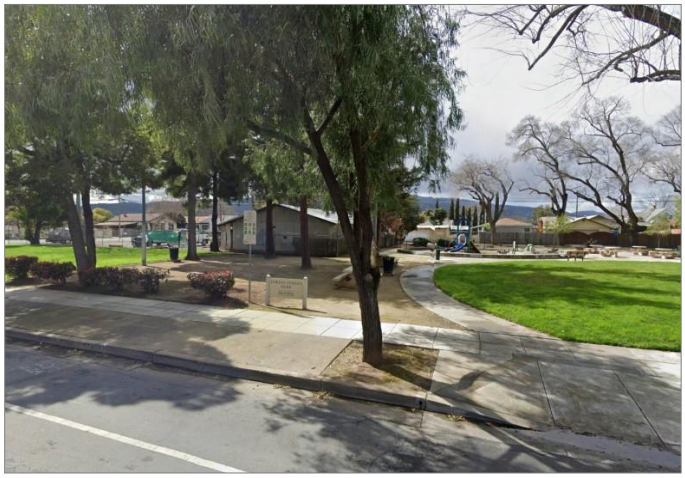
Gilroy

35. OFFSETTING MITIGATION MEASURE G-OMM#10: FOREST STREET PARK EXPANSION PROJECT

COMMUNITY: GILROY

ALTERNATIVES: 1, 2

Measure Description



The improvement will expand the City of Gilroy's Forest Street Park in accordance with the City's approved *Forest Street Park Master Plan*, with the intent of promoting a healthier community and improving the quality of life and property values in the neighborhood. The existing park has a children's play area and a small picnic area. The expanded park could include bocce ball courts and horseshoe pits. The project includes the acquisition of the adjacent property just south of the park, which is currently occupied by a commercial building. This is the second of two parcels needed to complete the approved master plan. The first parcel has already been acquired. Significant soil testing and anticipated mitigation of soil contamination is anticipated. Upon completion of property acquisition and soil mitigation, installation of the proposed improvements will be completed. The commercial property south of the existing park is currently for sale, and its acquisition is recommended as soon as possible to avoid losing the opportunity to acquire the park's expansion area.

Nexus to Disproportionately High and Adverse Effects

Alternatives 1 and 2 would extend through downtown Gilroy, resulting in adverse visual aesthetic effects on minority populations and low-income populations in the downtown area related to either an elevated aerial viaduct (Alternative 1) or an elevated embankment and grade separations (Alternative 2). Alternatives 1 and 2 would result in disproportionately high and adverse effects (DHAEs) relative to visual aesthetics on an end-to-end basis. While the proposed offsetting mitigation measure will not directly address the visual effects of the elevated rail alignment, it will provide indirect aesthetic benefits by expanding and improving a park, providing additional recreational amenities, and improving the visual quality of the park site.

Benefit to Minority Populations and Low-Income populations

The high-speed rail (HSR) alignment traverses the Gilroy community, where the percentage of minority populations and low-income populations is greater than that within the reference community. The proposed improvement will benefit the community's minority population and low-income population by providing health, recreation, quality of life, and visual quality improvements (Figure G-10).

Consistency with Community Goals and Planning

The U.S. Department of Housing and Urban Development administers the Community Development Block Grant (CDBG) Program, which is used to provide affordable housing, foster economic development, and improve the quality of life in primarily low- and moderate-income communities. A Neighborhood Revitalization Strategy Area (NRSA) is an area targeted for revitalization by improvements funded through the CDBG Program, which funds local community development efforts to provide affordable housing, reduce poverty, and enhance local

infrastructure. The proposed expansion of Forest Street Park is located within the City of Gilroy's NRSA, an area of both minority concentration and low-income concentration that needs higher levels of investment to meet the needs of the community.

The purpose of this improvement is to expand the Forest Street Park in accordance with the City's approved *Forest Street Park Master Plan*. In addition, the proposed improvement is consistent with the following goal from the *Gilroy 2040 General Plan*:

- Goal 16, Parks and Recreation: A comprehensive and coordinated system of convenient, efficient, and high-quality park and recreation facilities to meet the current and future needs of Gilroy residents, integrating important natural features and contributing to the City's identity and livability.

Furthermore, the improvement is consistent with the Gilroy City Council's goal of ensuring that neighborhoods benefit equally from City services.

Community Outreach Input and Relationship to DHAEs

Community outreach input, as expressed by City of Gilroy staff, that is addressed in this improvement includes the following:

- Area of impact is in need of a higher level of investment.
- Park expansion in accordance with the City's *Forest Street Park Master Plan*.

This improvement will provide for recreational opportunities, health benefits, and improved livability for residents in the Gilroy community. The improvement also provides indirect aesthetic benefits by expanding and improving a park. In particular, this improvement will benefit residents of a nearby neighborhood that is adjacent to the project alignment. Because the HSR alignment would travel through downtown Gilroy under Alternatives 1 and 2, residents in this area would experience various project effects under these project alternatives. Therefore, this improvement will apply under Alternatives 1 and 2.

Improvement Cost Estimate

Purchase of the property is estimated at $600,000. Mitigation of soil contamination should be negotiated to be completed by the seller, as a condition of sale. Future additional development costs will be determined when the final scope of the park is known. The Authority's funding commitment is capped at the identified level.

Roles and Responsibilities

The City of Gilroy receives CDBG funding to implement projects that benefit the City's minority neighborhoods and low-income neighborhoods. The City of Gilroy would implement this project, using both CDBG funds and funds provided by the Authority.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	The improvement will improve recreational opportunities, aesthetics, and community identity.
Relative Number of Beneficiaries	6	As a public local park, this improvement will benefit a broad cross-section of residents in neighborhoods affected by the HSR project.

Criteria	Ranking 1–15	Justification
Practicable	15	The improvement can be funded and implemented.
Defined Project or Action	10	The City of Gilroy has defined the improvements needed, but complete design is still necessary.
Satisfy Authority Obligations	15	Forest Park serves the neighborhoods adjacent to the HSR alignment and the Gilroy HSR station. The improvement will improve recreational opportunities, aesthetics, and community identity.
Defined Roles and Responsibilities	15	The Authority will provide funding. The City of Gilroy would improve the park.
Evidence of Agreement	15	The improvement is a priority for the City.
Cost-Effectiveness	15	The cost is low relative to the estimated number of beneficiaries.
TOTAL SCORE	106	

Authority = California High-Speed Rail Authority; HSR = high-speed rail.

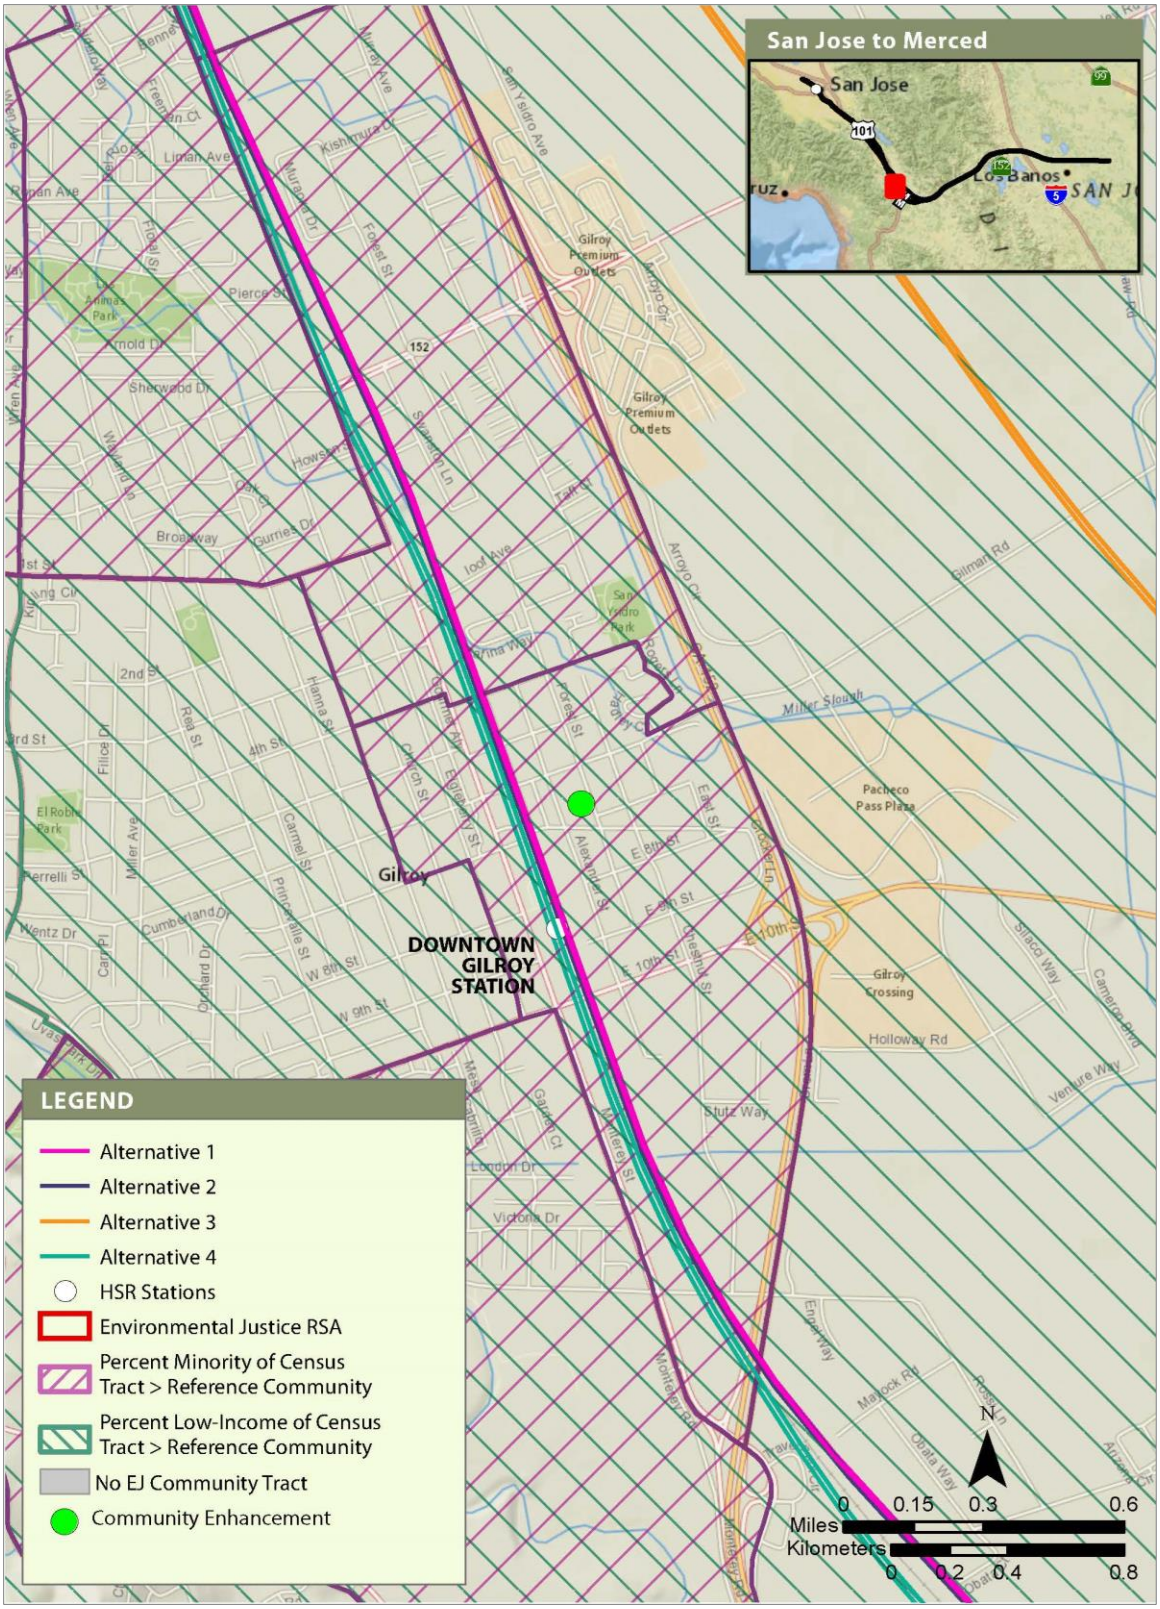


Figure G-10 Forest Street Park Expansion Project Gilroy

36. OFFSETTING MITIGATION MEASURE MH/G-OMM#1: AFFORDABLE HOUSING INVESTMENT

COMMUNITY: MORGAN HILL AND GILROY

ALTERNATIVE: 2

Measure Description

This offsetting mitigation measure will provide funding support for local housing initiatives that provide affordable housing opportunities for the general population and special-needs groups. Funding will be provided to cover 50 percent of the cost of approximately 59 affordable housing units in Morgan Hill and 75 affordable units in Gilroy.

Nexus to Disproportionately High and Adverse Effects

Under Alternative 2, the project would result in disproportionate, high, and adverse effects (DHAEs) on low-income populations related to residential displacement resulting from the project. There would be residual displacement impacts within the Morgan Hill and Gilroy communities after the application of relocation mitigation and consideration of project benefits. DHAEs would be related to the disproportionate displacement of low-income residents where there is insufficient residential relocation availability in Morgan Hill and Gilroy. The estimated deficit of available residential units relative to Alternative 2 is 59 units in Morgan Hill and 75 units in Gilroy. The provision of funding to support replacement affordable units will directly address residual impacts related to the displacement of housing and will address community needs by contributing to the development of affordable housing.

Benefit to Minority Populations and/or Low-Income Populations

The high-speed rail (HSR) alignment under Alternative 2 would result in residential displacements in Morgan Hill and Gilroy, where the percentage of minority residents and low-income residents is greater than that within the reference community. The proposed improvement will provide funding for affordable housing development to organizations serving minority populations and low-income populations in these communities and/or public entities with affordable housing programs. These organizations/entities provide affordable and/or transitional housing as well as associated services related to physical and economic health as well as overall quality of life benefits.

Consistency with Community Goals and Planning

This proposed improvement will be consistent with the following *Morgan Hill General Plan* Housing Element policies and *Gilroy 2040 General Plan* Housing Element policies:

Morgan Hill

- Policy HE-1h: Affordable Housing Strategy Implementation. Encourage the creation of rental housing, including housing for extremely low-income households, through available funds, banked land and community partnerships.
- Policy HE-1i: Flexible Housing. Allow flexibility to encourage alternative housing solutions that support affordable and intergenerational housing, including attached or detached accessory dwelling suites, home sharing and cohousing.

- Policy HE-1j: New Market Rate Developments. Promote and encourage provision of housing within new market rate development that is affordable to extremely low, very low, low, median, and moderate-income households.
- Policy HE-1q: Affordable Housing. Encourage the production and preservation of affordable housing units.
- Policy HE-1r: Funds for Affordable Units. When available, continue to make housing funds available to finance affordable projects, including housing for extremely low-income households. Consider assistance to below market rate ownership housing where a financing gap can be demonstrated.
- Policy HE-1s: Rental Housing Incentives. Continue to assist market rate and nonprofit developers in developing affordable rental housing.

Gilroy

- Policy H-2.1 The City shall encourage the provision of new affordable housing.
- Policy H-2.2 The City shall provide incentives for affordable housing, including but not limited to the density bonus ordinance, expedited project review, and Affordable Housing Exemption in the Residential Development Ordinance.
- Policy H-2.3 The City shall support homeownership opportunities for low- and moderate-income households.
- Policy H-2.4 The City shall encourage partnerships between non-profit and for-profit housing developers to encourage affordable housing production.
- Policy H-2.5 The City shall continue to require 15 percent of new housing in the Neighborhood District to be affordable to very low-, low-, and moderate-income households.
- Policy H-2.6 The City shall consider the development of single-room occupancy units, studio apartments, and other similar unit types that are affordable to extremely low-income residents in higher-density areas of the city.
- Policy H-2.7 The City shall continue to participate in programs that assist lower- and moderate-income households to secure affordable housing, such as the County's Mortgage Credit Certificate program, Section 8 rental voucher programs, and the Housing Trust Fund of Santa Clara County.

This improvement is also consistent with the following *Santa Clara County General Plan* Housing Element strategies and associated policies:

- Strategy #1: Plan for a balanced countywide housing supply. Support every Santa Clara County jurisdiction in developing housing to meet needs of all household types, affordable housing development goals, State General Plan Housing Element requirements, and regional land use and transportation planning objectives.
- Strategy #2: Promote cooperation and collaboration on residential development. The County and cities are encouraged to explore every feasible opportunity to assist home builders in getting affordable housing built. By working with neighborhood residents and community organizations to promote a diverse housing supply, and by working with each other, as well as the private sector, we can capitalize on all the ideas, the expertise, and untapped resources we have in this county.
- Strategy #3: Provide financial assistance for extremely low-income housing. Any type of housing is expensive to build in this county and not likely to become less so. If we are to ensure that the housing needs of all residents are met, we will have to work with home builders to help curtail their costs and to contribute in some fashion to making their projects financially feasible.

- Strategy #6: Provide for Special Needs Households. To be successful, our efforts to create a balanced housing supply must include housing suitable for households with extraordinary needs. These would include housing for people of all ages, who may have physical or emotional challenges, or those with extremely low or no incomes. The policies pertaining to housing for special needs households encourage a closer partnership between homebuilders and the County and cities to ensure that appropriate and affordable housing is built.
- Strategy #7: Reduce Homelessness Consistent with Housing First Principles. The needs of the homeless shall be met through methods intended to place them in permanent housing as soon as possible. Homeless shelters shall be supported by service providers providing the full range of assistance needed by the homeless. Temporary emergency shelters shall be used only as part of a continuum of care that leads to permanent housing.
- Strategy #8: Maintain and Expand the Supply of Farm Worker Housing. Housing for farm workers is considered by the State to be one form of special needs housing. However, the shortage of farm worker housing and its relationship to a viable agricultural economy and healthy communities is so important to Santa Clara County that it is appropriate for the County to designate a strategy that specifically targets this housing need.

Community Outreach Input and Relationship to DHAEs

Input from various community organizations and government/educational entities—including the Santa Clara County Planning Department, Center for Employment Training, and HomeFirst—that is addressed by this improvement identified the following concerns regarding housing needs within Santa Clara and the San Jose communities:

- Need for affordable housing for students.
- Need for housing for farm workers.
- Housing scarcity.
- Increased homelessness.

This improvement, which will apply under Alternative 2, will provide funding and/or land for affordable housing development to organizations and/or public entities serving minority populations or low-income populations in these communities, providing support for the replacement of affordable housing and relief to address a more general shortage of affordable housing within these communities and the County as a whole.

Improvement Cost Estimate

A total of $40.2 million will be allocated to this improvement. This assumes co-financing (Authority will contribute 50 percent) related to construction of 59 affordable housing units in Morgan Hill and 75 affordable housing units in Gilroy at a per-unit cost of $600,000 (Authority contribution at $300,000 per unit).

Roles and Responsibilities

The California High-Speed Rail Authority (Authority) will provide funding for organizations and public entities providing services related to affordable housing opportunities. Funding will be issued through a grant program, with priority of funding given to those organizations and entities filling priority needs, as identified by the Cities of Morgan Hill and Gilroy and the County of Santa Clara. The following are examples of local organizations/initiatives providing such services:

- Habitat for Humanity Silicon Valley: develops affordable ownership housing for low-income families with between 30 and 50 percent of the area’s median income, offering 0 percent interest mortgages, for nine single-family homes in Santa Clara.
- MidPen Housing: develops affordable housing; manages affordable properties; provides family, senior, and supportive housing services.
- Bridge Housing: affordable housing developer.

- Gavilan College: provides affordable housing for low-income students.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this improvement.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	Minority populations and low-income populations in need of affordable housing will benefit.
Relative Number of Beneficiaries	15	Affordable housing will benefit a broad number of Santa Clara and San Jose residents.
Practicable	10	Funding for this improvement is practicable; however, sufficient funds will need to be dedicated to this improvement for organizations and public entities to receive adequate funding for implementation of housing projects.
Defined Project or Action	10	The Authority will provide funding; specific organizations and/or public entities to be funded/housing opportunities to be constructed is to be determined.
Satisfy Authority Obligations	15	This improvement will provide community uplift and economic benefits.
Defined Roles and Responsibilities	5	Community partners are to be defined (potential partners identified above).
Evidence of Agreement	15	No specific feedback was received on this improvement, but this is a priority for the County and potential partner organizations.
Cost-Effectiveness	5	Cost is high relative to estimated number of beneficiaries
TOTAL SCORE	90	

Authority = California High-Speed Rail Authority.

37. OFFSETTING MITIGATION MEASURE SJV-OMM#1: VOLTA ELEMENTARY SCHOOL ENHANCEMENTS

COMMUNITY: SAN JOAQUIN VALLEY

ALTERNATIVES: 1, 2, 3, 4

Measure Description

The proposed offsetting mitigation measure will contribute funds to improve and expand Volta Elementary School. These funds could be used for tree planting and other landscaping; window replacement; insulation installation; and construction of permanent classrooms to replace the portables, a parking area, or a community room at Volta Elementary School. Funds also could be used for water supply improvements and other critical safety features required for school expansion.

Nexus to Disproportionately High and Adverse Effects

All four project alternatives would result in disproportionately high and adverse effects (DHAEs) on low-income populations related to the project's operational noise impacts after the consideration of mitigation and project benefits. There would be residual severe noise impacts in the San Joaquin Valley after the application of proposed noise barrier mitigation. While the proposed offsetting mitigation measure will not directly address operation noise impacts resulting from the project, it will provide a targeted community improvement for a facility that is vital to facilitating civic engagement among residents and maintaining a close-knit community.

Benefit to Minority Populations and Low-Income Populations

The high-speed rail (HSR) alignment under all alternatives would traverse the San Joaquin Valley community, where the percentage of minority residents and low-income residents is greater than that within the reference community.

The proposed offsetting mitigation measure will benefit minority residents and low-income residents and community members who are served by Volta Elementary School by providing enhanced education facilities and community-serving site facilities. Health, safety, and educational benefits will be provided through the provision of enhanced utilities, safety improvements, and improved educational space. The location of the offsetting mitigation measure relative to the location of the HSR alignment within the San Joaquin Valley community is shown graphically in Figure SJV-1.

Consistency with Community Goals and Planning

This offsetting mitigation measure will be consistent with Los Banos Unified School District (LBUSD) planning.

Community Outreach Input and Relationship to DHAEs

Input from LBUSD that is addressed by this offsetting mitigation measure indicated the need for school site improvements to modernize and enhance facility functionality and for additional community space for Volta residents.

This offsetting mitigation measure will provide improvements to Volta Elementary School that will improve the educational environment and provide additional community-serving facilities, thus

providing educational, health, and safety benefits. Because the HSR alignment would travel through the community under all project alternatives, residents would experience various project effects under all alternatives. This offsetting mitigation measure will apply under all alternatives.

Improvement Cost Estimate

The California High-Speed Rail Authority (Authority) proposes a $5 million contribution toward Volta Elementary School to improve its facilities and expand its capacity. This is only a rough estimate due to the preliminary nature of conceptual design.

Construction of permanent classrooms to replace all the portables that are currently at the Volta Elementary School will essentially require construction of a new school. School expansions and new schools constructed in the greater vicinity had costs ranging from $7 million for an expansion project to $25 million for new junior high and new elementary schools. An overall cost for improving the school was assumed to be approximately $15 million as a mid-point based on what was spent on other schools in the area. Since this improvement is intended to offset noise impacts only and not address all needs at the school, conceptually it is proposed that the Authority will contribute one-third of the overall school improvement cost, or $5 million.

Roles and Responsibilities

The Authority will provide funding for the proposed improvements at Volta Elementary School. Los Banos Unified School District would implement the improvements.

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this offsetting mitigation measure.

Evaluation

Criteria	Ranking 1–15	Justification
Benefit Intensity	15	This offsetting mitigation measure will provide educational benefits for Volta Elementary School students and social benefits for members of the local Volta community.
Relative Number of Beneficiaries	12	The Volta Elementary School is the primary community asset in the Volta community. Improving the school will benefit the entire community as a result.
Practicable	15	Authority contribution is feasible. LBUSD could implement improvements using the funding.
Defined Project or Action	15	Authority contribution is defined, and LBUSD has identified a suite of likely improvements, but further design of the new classrooms is needed.
Satisfy Authority Obligations	15	This offsetting mitigation measure will provide educational benefits for Volta Elementary School students and social benefits for the local Volta community, which is directly affected by the HSR project.
Defined Roles and Responsibilities	15	Authority will provide capital funding. LBUSD would implement and fund lifecycle costs.
Evidence of Agreement	15	Community improvement is a priority for LBUSD.
Cost-Effectiveness	6	Cost is relatively high relative to number of beneficiaries.
TOTAL SCORE	108	

Authority = California High-Speed Rail Authority; HSR = high-speed rail; LBUSD = Los Banos Unified School District.

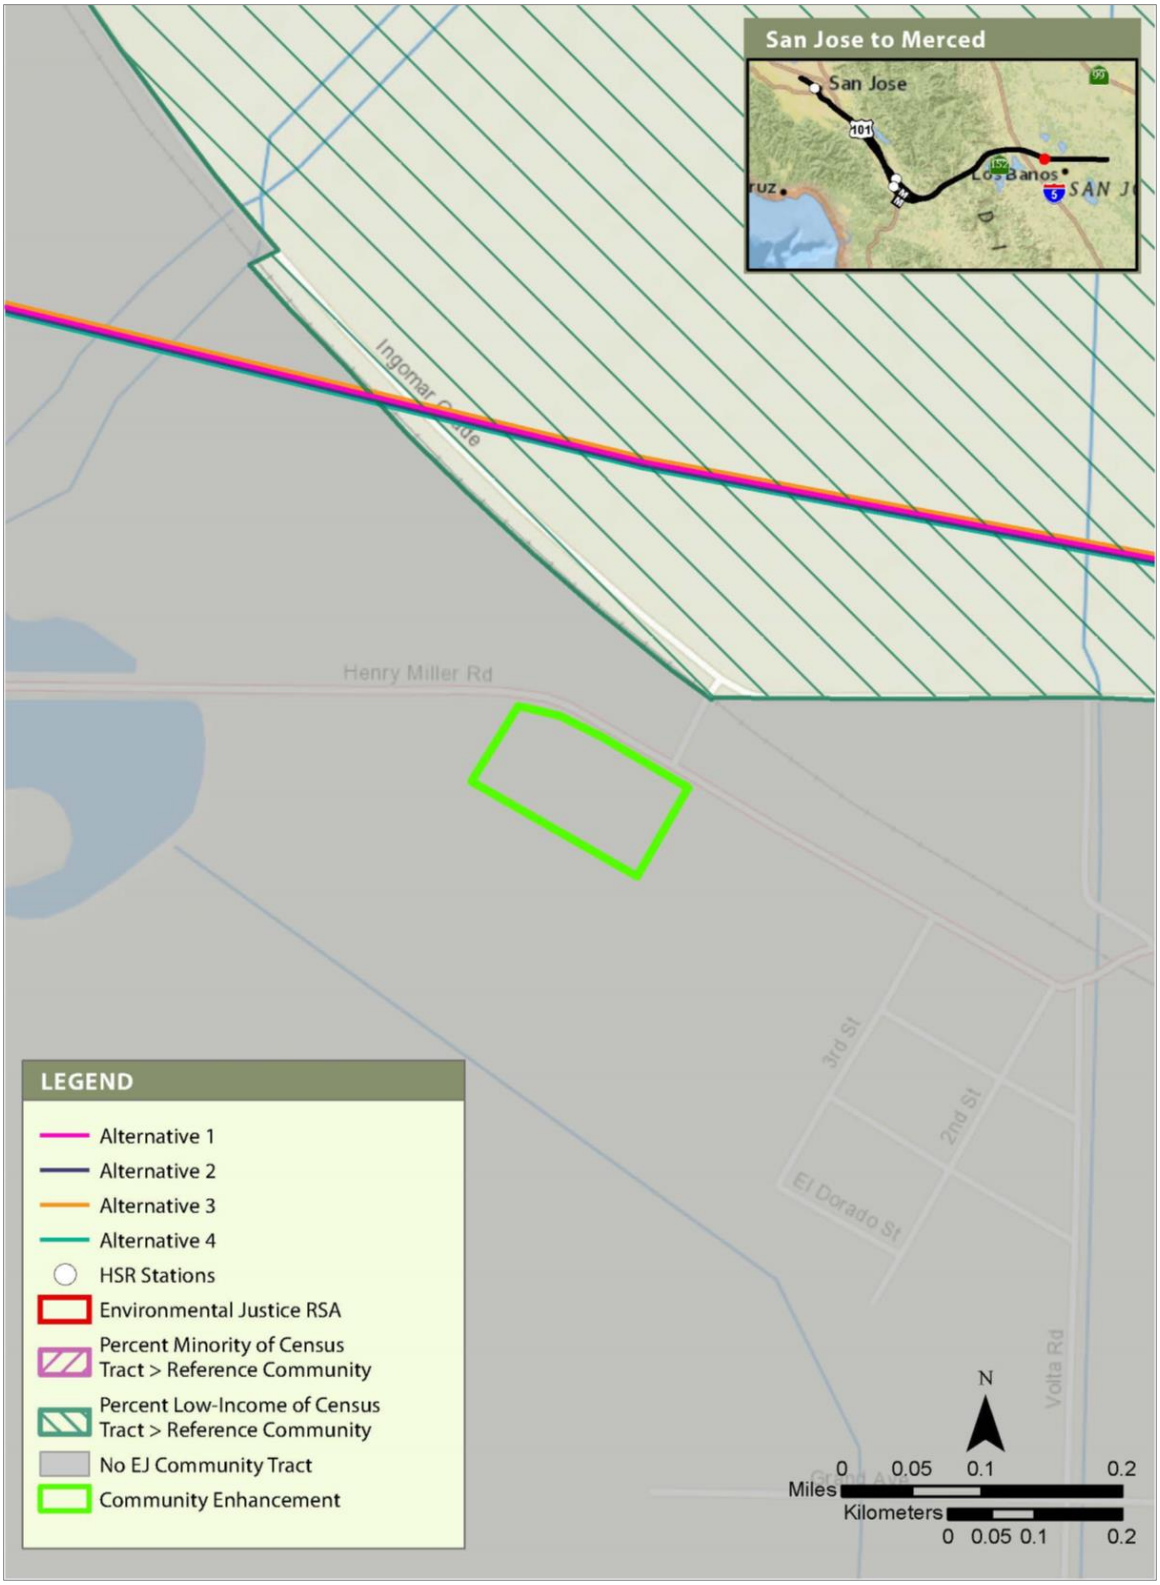

Figure SJV-1 Volta Elementary School Enhancements
San Joaquin Valley

38. OFFSETTING MITIGATION MEASURE SJV-OMM#2: VOLTA COMMUNITY PARK AT VOLTA ELEMENTARY SCHOOL

COMMUNITY: SAN JOAQUIN VALLEY

ALTERNATIVES: 1, 2, 3, 4

Measure Description

The proposed improvement will provide funding for development at the Volta Elementary School campus for use as a community park. The park could include a combination of turf, ball courts, shade structures, picnic tables, and play equipment and will be accessible to the broader community. This measure will also include fencing (to separate the park from the school for potential after hours use) and a small parking lot. This improvement will apply to all alternatives.

Nexus to Disproportionately High and Adverse Effects

All four project alternatives would result in adverse visual aesthetic effects on low-income populations related to the proposed aerial viaduct and elevated embankment in the San Joaquin Valley Subsection after direct mitigation. Alternatives 1, 2, and 3 would result in disproportionately high and adverse effects (DHAEs) relative to visual aesthetics on an end-to-end basis. Although Alternative 4 would not result in DHAEs relative to visual aesthetics on an end-to-end basis, it would have the same design as the other alternatives in the San Joaquin Valley Subsection and the same adverse visual effects and thus this improvement is also recommended for Alternative 4. While the proposed offsetting mitigation measure will not directly address the visual effects of the elevated rail alignment, it will provide indirect aesthetic benefits by creating a community park, recreational fields, and provide a sense of place in Volta that will promote civic engagement among residents and help to maintain a close-knit community by providing a safe place for student and community recreation and gathering.

Benefit to Minority Populations and Low-Income Populations

The HSR alignment under all alternatives would traverse the San Joaquin Valley community, where the percentage of minority residents and low-income residents is greater than that within the reference community.

This proposed improvement will benefit minority residents and low-income residents by providing additional recreational opportunities for Volta Elementary School students and for the surrounding community. The location of the improvement relative to the HSR alignment within the San Joaquin Valley community is shown graphically in Figure SJV-2.

Consistency with Community Goals and Planning

This improvement will be consistent with the guiding policy of the Merced County General Plan for high-quality park systems in the County. It will also further the Los Banos Unified School District objective to promote use of school facilities after school hours.

Community Input and Relationship to Overall Project Effects

Input that is addressed by this improvement included the following concerns:

- Lack of neighborhood park

- Insufficient recreational opportunity on the elementary school site

This improvement will support the School District to develop an area at the Volta Elementary School for use as a community park. Because the HSR alignment would travel through the community under all alternatives, residents would experience various project effects under all alternatives. This improvement will apply under all alternatives.

Improvement Cost Estimate

The exact mix of shade structures, picnic tables, playground equipment, basketball court, and playing fields would be determined later. For the purposes of a cost estimate, the following national average costs were identified from the North Carolina State University Extensions' Cost Analysis for Improving Park Facilities to Promote Park-based Physical Activity.[2]

- Shade structure – This element was assumed to be a medium shelter (avg. size 1,100 sf) with a cost to construct of $48,100
- Picnic area - This element was assumed to be a medium picnic area (avg. size 6,700 sf) with a cost to construct of $9,700.
- Playground - This element was assumed to be a medium playground (avg. size 5,900 sf) with a cost to construct of $267,100.
- Basketball court – This element was assumed to be a medium court (7,000 sf) with a cost to construct of $32,100.
- Play field – This element was assumed to be a small softball/baseball field (avg. size 20,100 sf) with a cost to construct of $213,700.

The total of these elements based on the national average costs is $570,700. The study costs were based on 2012 construction cost data. In order to account for increase in construction costs over time, these costs were inflated to $2020 by multiplying by 23 percent. In order to account for the differences in California labor, materials, and other costs relative to national averages, the costs were multiplied by 50 percent. The total estimated costs for the park improvements using these assumptions would be $1,054,000.

The following additional improvements are presumed:

- Site fencing (estimated cost of $50/sf, total of 1,000 feet, cost $50,000) to separate the playground area from school property for potential after hours use.
- A small parking lot (up to 20 spaces) will also be provided (estimated 350sf per space, $7/sf construction, 20 spaces for a total of $49,000).

Based on the above estimates, total costs are estimated as $1,153,000.

Roles and Responsibilities

The Authority will provide funding to the Los Banos Unified School District to develop the community park at the Volta Elementary School. The School District would implement this measure.

[2] North California State Extension. 2015. *Cost Analysis for Improving Park Facilities to Promote Park-based Physical Activity*. https://content.ces.ncsu.edu/cost-analysis-for-improving-park-facilities-to-promote-park-based-physical-activity (accessed November 21, 2021).

Assessment Based on Evaluation Criteria

Based on the evaluation criteria developed by the Authority, the following assessment has been completed for this offsetting mitigation measure.

Criteria	Ranking 1-15	Justification
Benefit Intensity	15	This improvement will provide recreational and community aesthetics to both the Volta Elementary School and the Volta community, which would be directly affected by the HSR project.
Relative Number of Beneficiaries	6	This improvement will benefit the entire Volta community, since there are no municipal parks in or near the community.
Practicable	15	The property is controlled by the school district and the types of improvements are common park/playground improvements.
Defined Project or Action	15	The general improvements are understood. The specific improvements have yet to be designed.
Satisfy Authority Obligations	15	This improvement will provide recreational and community aesthetic benefits to both the Volta Elementary School and the Volta community, which would be directly affected by the HSR project.
Defined Roles and Responsibilities	15	Authority will provide capital funding. LBUSD would implement and maintain the improvements.
Evidence of Agreement	10	LBUSD suggested this measure and has been involved in the development of the concepts.
Cost-Effectiveness	15	Cost is relatively low relative to number of beneficiaries.
TOTAL SCORE	106	

Authority = California High-Speed Rail Authority; HSR = high-speed rail; LBUSD = Los Banos Unified School District.

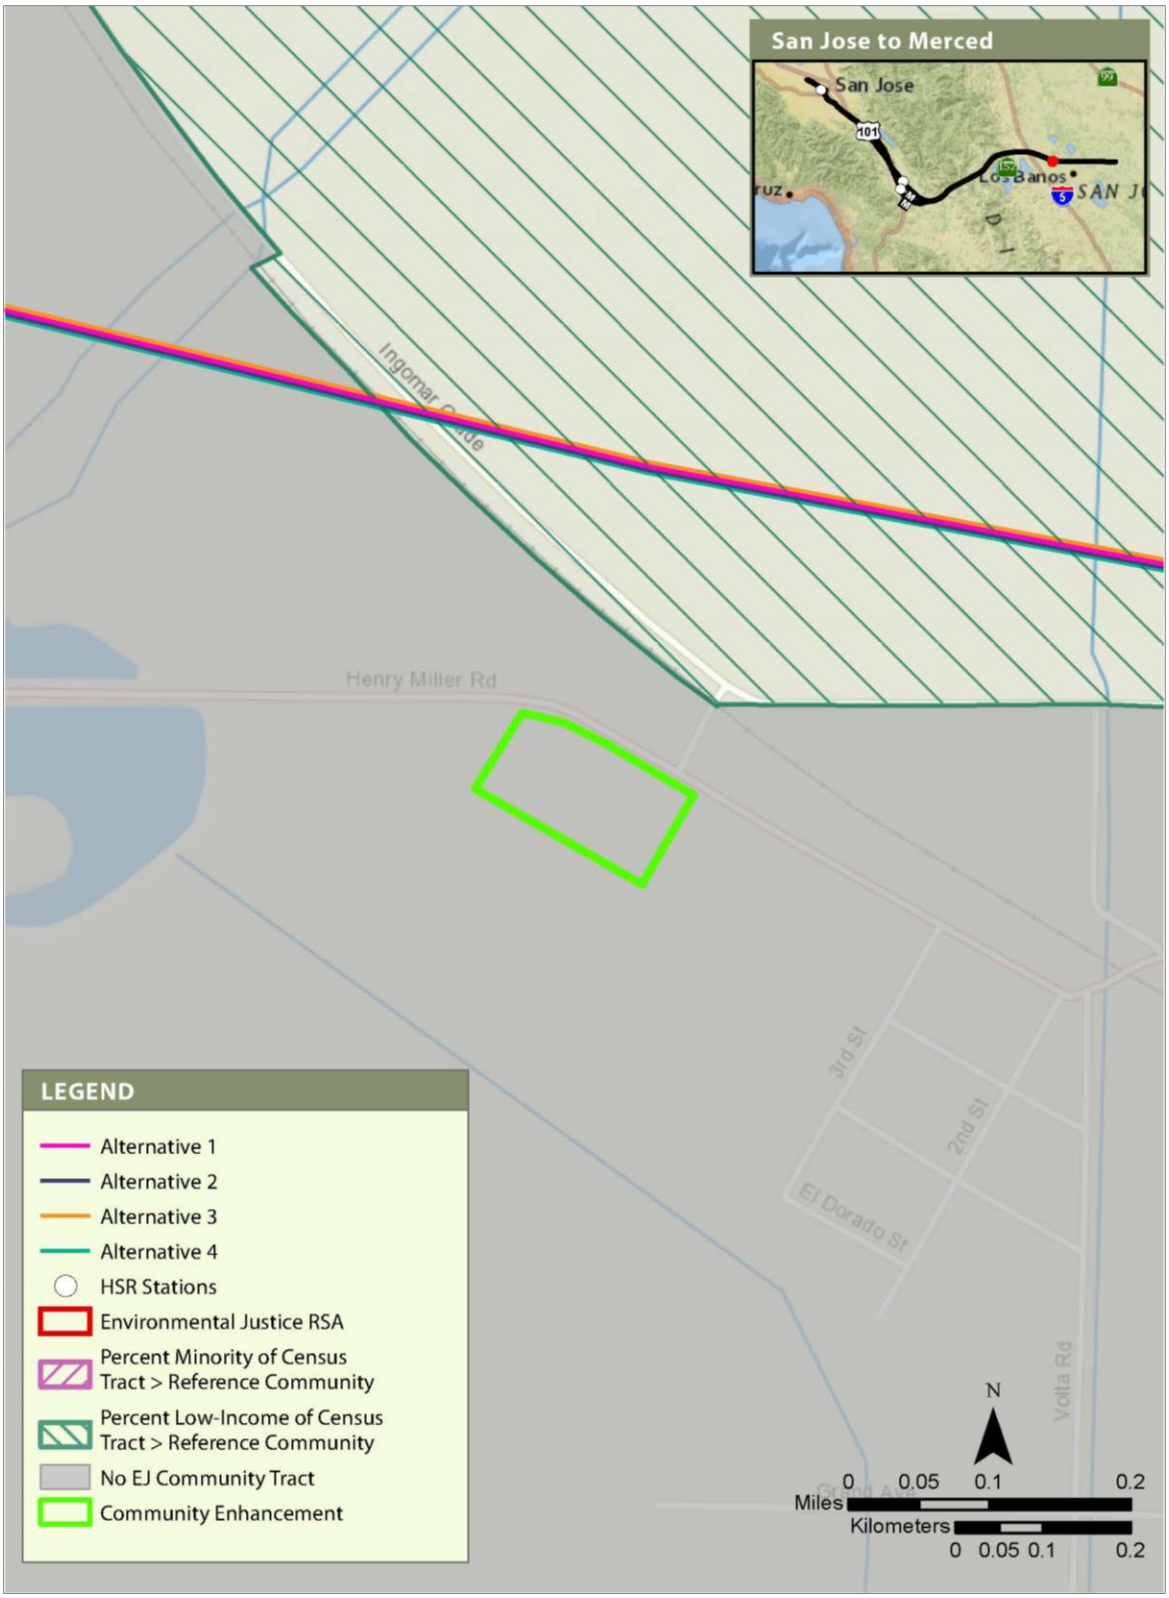

Figure SJV-2 Volta Community Park at Volta Elementary School
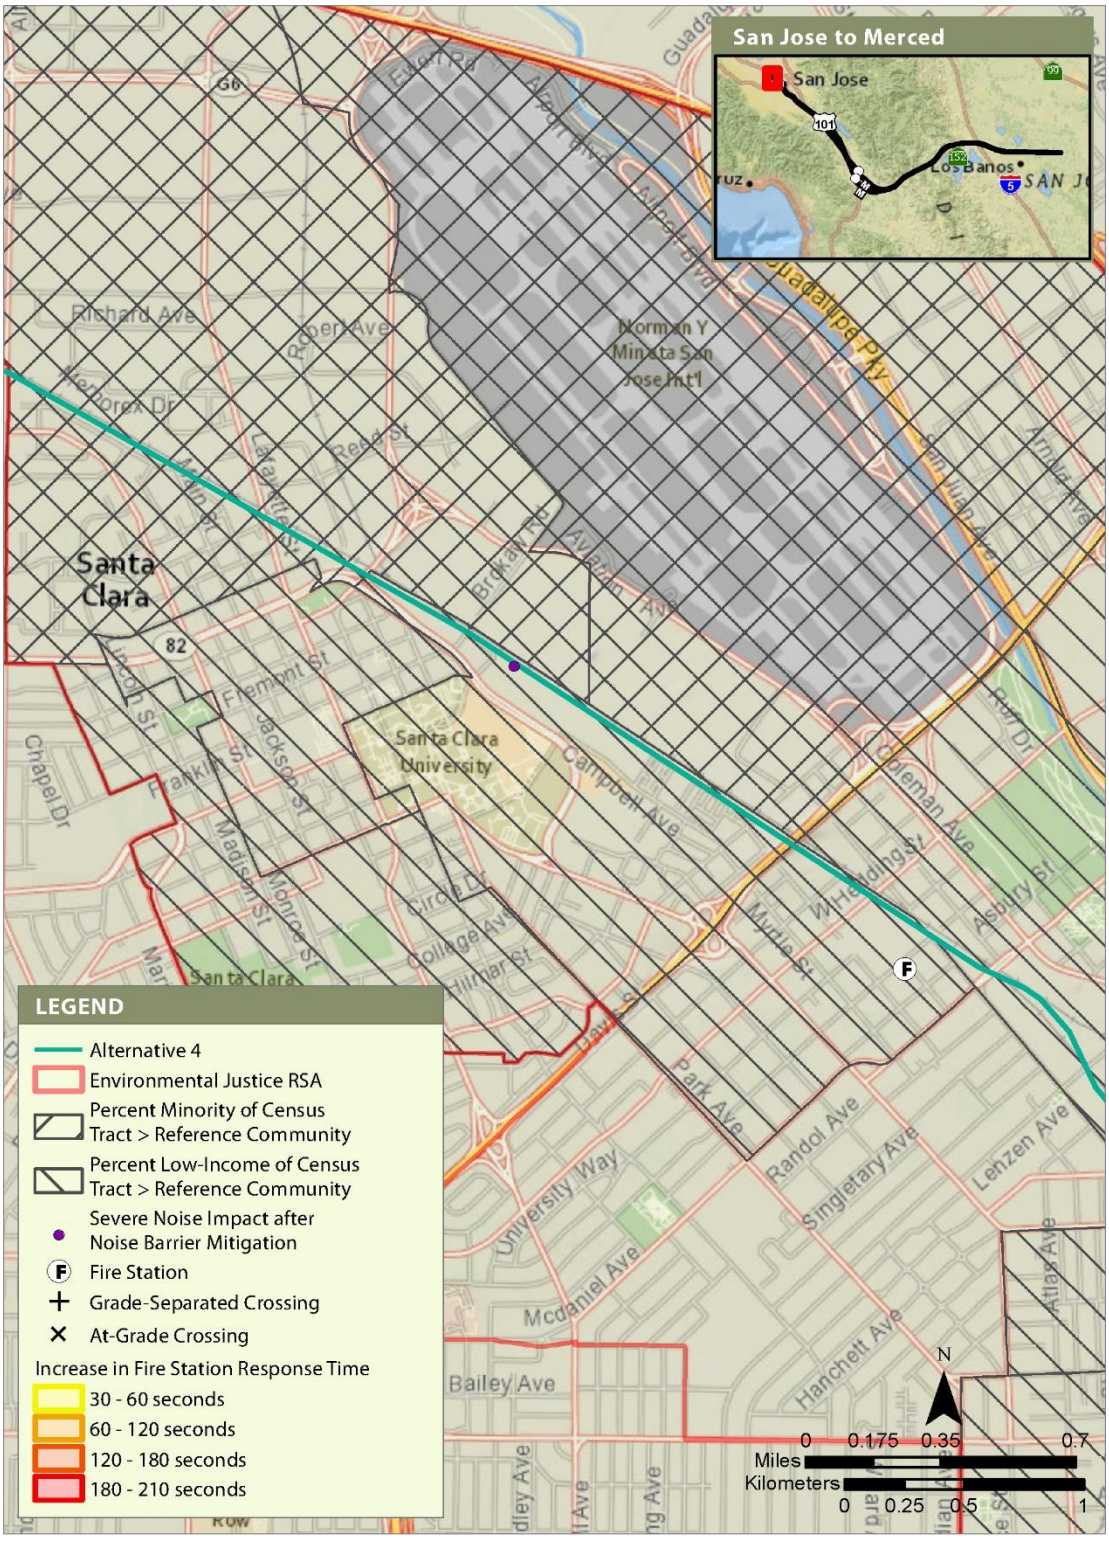
SAN JOAQUIN VALLEY

APPENDIX 5-D: PREFERRED ALTERNATIVE, MAPS OF DISPROPORTIONATELY HIGH AND ADVERSE EFFECTS BEFORE CONSIDERATION OF COMMUNITY IMPROVEMENTS

This appendix provides figures showing the disproportionately high and adverse effects on minority populations and low-income populations for Alternative 4 after consideration of direct mitigation and project benefits but before the consideration of the offsetting value of potential community improvements. Consequently, as explained in Chapter 5, Environmental Justice, Figures 5-D-1 through 5-D-37 show the locations of severe noise impacts (after implementation of noise barriers) and the locations where emergency vehicle response delay may be greater than 30 seconds. As described in Chapter 5, significant impacts associated with emergency vehicle response times with Alternative 4 are only expected if local jurisdictions do not implement the necessary improvements included in Mitigation Measure SS-MM#4 with the funding provided by the California High-Speed Rail Authority for capital improvements and for the first 5 years of operations of any new fire stations necessary to reduce impacts to a less-than-significant level. The figures also show the census tracts where minority populations or low-income populations constitute a greater percentage of the population in the census tract than the share of minority populations or low-income populations in the three-county reference community (Santa Clara, San Benito, and Merced Counties).

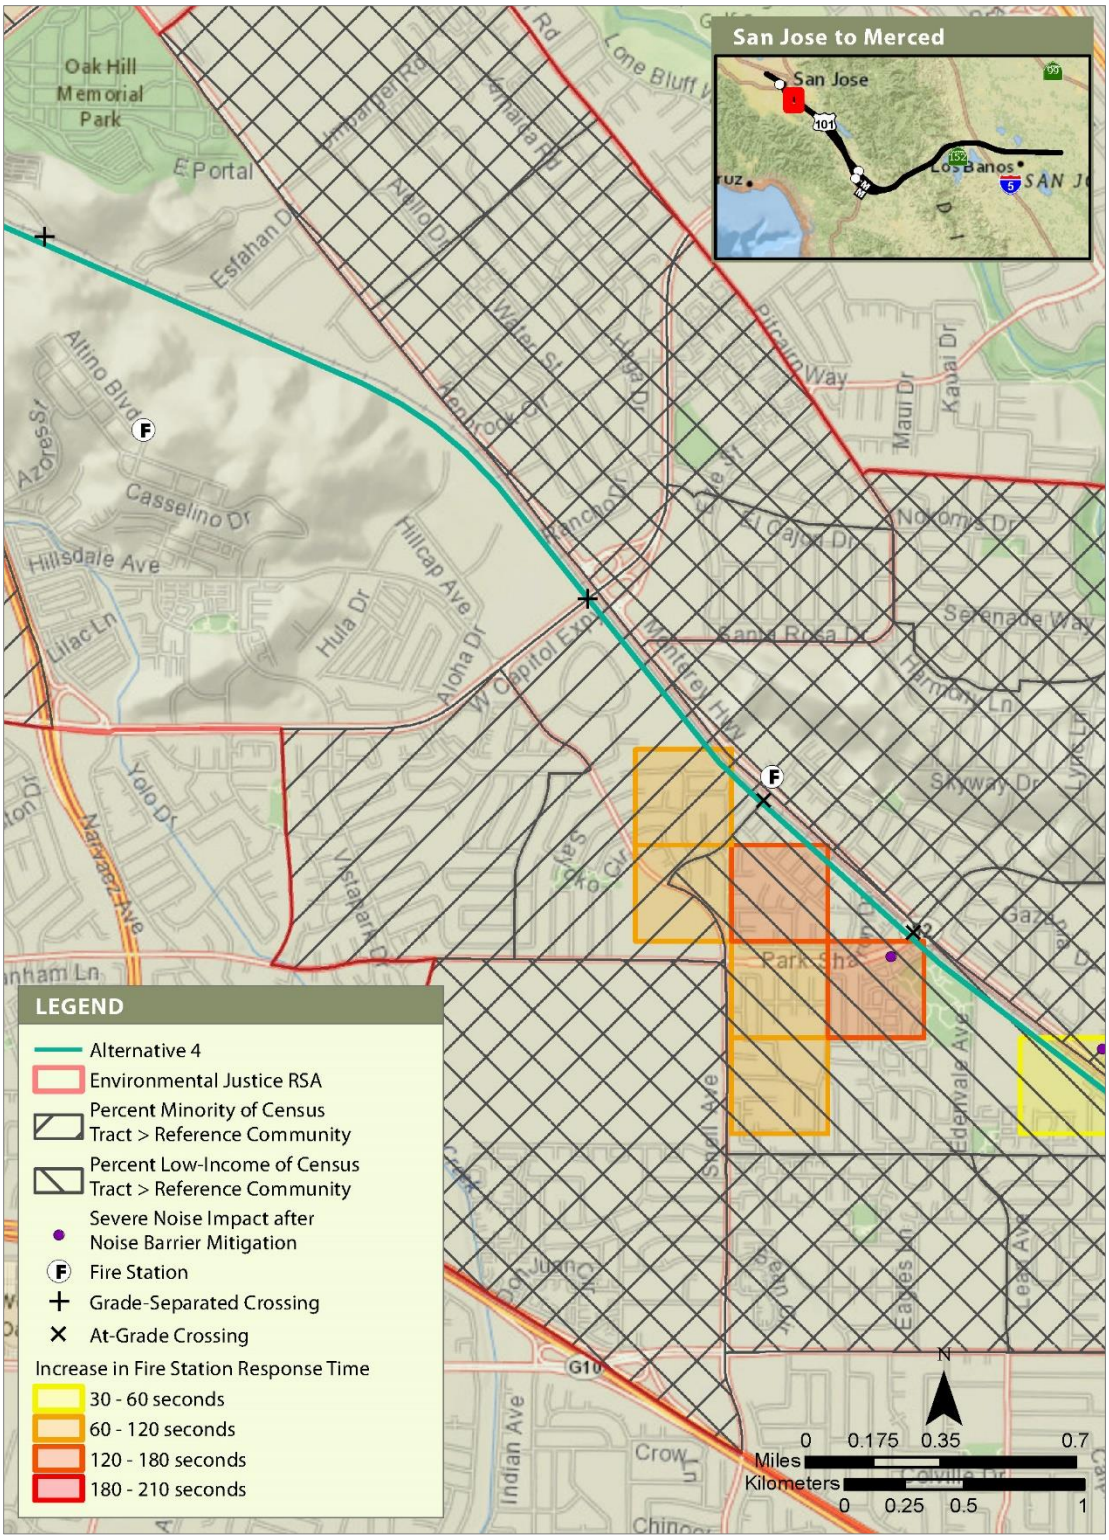


1. Noise impacts shown are locations of severe noise impacts after noise barrier mitigation (see discussion in Section 3.4, Noise and Vibration).
2. Emergency Response Vehicle Delays shown are areas with greater than 30 seconds delay based on worst-case analysis assuming all gates are down at the same time (see discussion in Section 3.11, Safety and Security).

Figure 5-D-1 Locations of Disproportionately High and Adverse Noise and Emergency Vehicle Response Delays before Consideration of Offsetting Community Improvements, Alternative 4 (1 of 37)

1. Noise impacts shown are locations of severe noise impacts after noise barrier mitigation (see discussion in Section 3.4, Noise and Vibration).
2. Emergency Response Vehicle Delays shown are areas with greater than 30 seconds delay based on worst-case analysis assuming all gates are down at the same time (see discussion in Section 3.11, Safety and Security).

Figure 5-D-2 Locations of Disproportionately High and Adverse Noise and Emergency Vehicle Response Delays before Consideration of Offsetting Community Improvements, Alternative 4 (2 of 37)



1. Noise impacts shown are locations of severe noise impacts after noise barrier mitigation (see discussion in Section 3.4, Noise and Vibration).
2. Emergency Response Vehicle Delays shown are areas with greater than 30 seconds delay based on worst-case analysis assuming all gates are down at the same time (see discussion in Section 3.11, Safety and Security).

1.0 INTRODUCTION

1.1 Purpose and Scope

The purpose of this report is to present the Capital Cost Estimating Methodology (CCEM) in the preparation of reasonably reliable and accurate capital cost estimates for the PEPD Design level.

This document describes the methodology for preparation of estimated capital cost for the California High-Speed Rail Project (CHSRP) San Jose to Merced PEPD document. In addition, it presents the summary of Capital Cost Estimates along with detailed FRA Standard Cost Categories (SCC) and sub-categories or cost elements. Refinement of these cost estimates will be on-going during the advancement of engineering during subsequent project development phases.

The primary objectives of this report are:

- Identify the methods and processes used to develop the capital cost estimate during PEPD Design Level Phase;
- Identify the source documents and/or methodology used for pricing work;
- Specify how estimating assumptions have been documented during the course of the estimate development;
- Describe Unit Price Elements;
- Define the approach and methodology with respect to FRA Standard Cost Categories (SCC);
- Present estimates have been developed for each complete alignment alternative for the San Jose to Merced Project Section.

The estimating approach has been done in a manner that (1) allows consistent application to each alternative to facilitate comparisons; (2) provides the proper foundation for more detailed estimates as selected alternative(s) are further evaluated; and (3) provides the basis for subsequent construction package procurement level estimates with additional guidelines for a more detailed capital cost estimate.

Considering CHSRP's size, complexity, phased design, and number of participants, it is important that the CCEM is flexible enough to be applied at each point in the project development process to appropriately support the tracking, monitoring and control of cost changes through each of the program's design and implementation phases. This document addresses only the capital cost estimating requirements for the PEPD Design level. Additional guidelines have been developed for the preparation of capital cost estimates for subsequent phases of the CHSRP.

1.2 Statement of Technical Issue

The document is intended to address the preparation of a program cost estimate, including construction, acquisition of right-of-way, vehicles, and professional services during execution of the project.

The CCEM is intended to provide guidelines for accurately and consistently estimating the costs of capital infrastructure and systems for the PEPD Design level. It also provides a framework for defining the scope and technical basis for the estimates, the roles and responsibilities for specific estimating tasks among the project participations, and the structure, organization, and format for reporting capital costs for all geographic sections of CHSRP.

1.3 General Information

1.3.1 Definition of Terms

Technical terms, acronyms, or other cost estimating terminology specifically used for capital cost estimating purposes, unless otherwise indicated, will follow the standard definition of terms published by the Association for the Advancement of Cost Engineering (AACE) International in their Recommend Practice No. 10S-90 – Cost Engineering Terminology.

The following acronyms used in this document have specific connotations with regard to California High Speed Rail system.

Acronyms

AACE	Association for the Advancement of Cost Engineering
CCEM	Capital Cost Estimating Methodology
Authority	California High-Speed Rail Authority
CHSRP	California High-Speed Rail Project
ENR	Engineering News Record
FRA	Federal Railroad Administration
FTA	Federal Transit Administration
HST	High Speed Train
LCCA	Life Cycle Cost Analysis
O&M	Operating and Maintenance
PMT	Program Management Team
RC	Regional Consultant(s)
SCC	Standard Cost Categories
TM	Technical Memorandum
WBS	Work Breakdown Structure

1.3.2 Units

The California High-Speed Rail Project is based on U.S. Customary Units consistent with guidelines prepared by the California Department of Transportation and defined by the National Institute of Standards and Technology (NIST). U.S. Customary Units are officially used in the United States and are also known in the US as “English” or “Imperial” units. In order to avoid confusion, all formal references to units of measure shall be made in terms of U.S. Customary Units.

Guidance for units of measure terminology, values, and conversions can be found in the Caltrans Metric Program Transitional Plan, Appendice B U.S. Customary General Primer (http://www.dot.ca.gov/hq/oppd/metric/TransitionPlan/Appendice-B-US-Customary-General-Primer.pdf). Caltrans Metric Program Transitional Plan, Appendice B can also be found as an attachment to the CHSRP Mapping and Survey Technical Memorandum.

2.0 CAPITAL COST ESTIMATING METHODOLOGY

Estimating methodologies are not static and must be flexible enough to adjust to the needs of the project's stage in the development process. The development process is described by the overall level of engineering design associated with the major development stages defined for the CHSRP:

Development Stage	Engineering Design Completion
Programmatic EIR/S	
Project EIR/S	
PEPD Design Level	
Procurement Level	
Design-Build	
	0 15% 30% 90% 100%

Each development stage is represented by a range of engineering design completion and influenced by ongoing updates to the ridership demand forecast and associated revisions to estimated system capacity, service design and operating plans. Because of this variability, the appropriate estimating methods or procedures at a given milestone will be based on the actual levels of project engineering and scope definition present at that time. Because the program will be designed in multiple segments, the level of engineering design completed for major high-speed rail system elements will be at different levels at any point in time. The goal of using established estimating methodologies is to assure that project estimates are prepared in a consistent and uniform manner, organized and standardized in methods, and formatted in order to facilitate estimate review and reporting.

2.1 Estimating Format

A consistent format is developed for the reporting, estimating, and managing of the project's capital costs. This document recommends using standard cost categories (SCC) established by the Federal Railroad Administration (FRA) as part of American Recovery and Reinvestment Act (ARRA) grant application requirements. Preparation of capital costs in SCC format is adopted throughout the PEPD Design phase.

2.2 Estimating Software

Commercially available database software systems are used depending on the type of work elements. For example, Timberline is used for surface heavy construction work elements and HCSS is used for underground work elements. However, in order to provide uniformity between numerous work elements and sections of the corridor and to provide consistent platform for reporting and analysis requirements, the cost data are exported to Microsoft Excel. This will better enable the review, edit consolidation and reporting of estimate components over the course and provide more flexibility to make adjustments.

2.3 FRA Standard Cost Category (SCC)

The methodology used for generating capital cost estimates has been consistent with FRA guidelines for estimating capital costs. The heart of the FRA guidance is the SCC, which enables FRA-funded projects to develop budget baselines that summarize to the SCC. This cost structure is used for capital cost detail and summary sheets and is described below. Where the level of design does not support quantity measurements, parametric estimating techniques were utilized.

2.3.1 Work Breakdown Structure (WBS)

This involves the development of the Work Breakdown Structure (WBS) that is applied to cost estimating and cost reporting. The WBS for estimating includes a coding system that is used for estimating elements. The WBS for reporting includes the development of a coding system that allows the cost estimates to be sorted and presented by categories and subcategories as prescribed by the FRA.

The WBS for capital cost estimates for the PEPD Design level is based upon the FRA Standard Cost Categories is presented in Appendix A.

The primary WBS for quantities and unit prices are Unit Price Element's (UPE's). UPE's were originally developed as an estimating tool to assist in the development of conceptual level cost estimates and provide a method for translating typical construction items into a unit-based unit of measurement. The scope and definition of UPE's are developed by the Regional Consultant based on the unique design present in their project section.

2.3.2 Estimated Unit Costs

The development of construction unit costs for each of the construction activities that is identified and quantified from the design documents. The development of individual or composite estimated unit costs is accomplished through the use of historical bid data and by unit cost analysis, as appropriate, using labor, equipment and material rates. Unit costs are expressed in current year dollars and are adjusted to reflect any regional variations.

These methods are used either individually or in combination. For the PEPD Design level, when limited engineering details are available, the historical bid price method is typically used.

2.3.2.1 Historical Bid Price Method

Historical bid prices are typically used to develop costs for common construction elements. When using this method, the time of bid and conditions of the historical project used for pricing is considered and factors applied as needed:

- Adjust bid prices where the bid date is older than 12 months from the current date by using an appropriate escalation factor
- Adjust bid prices to reflect conditions of the project, such as type of terrain, geographical location, soil, traffic and other related factors. For location factor adjustments, the City Cost Index as published by RS Means is used.

Sources for historical bid prices that are used may come from local, regional, statewide and national levels, as well as from international high-speed rail projects with unique high-speed elements. Historical unit prices that are used for the CHSRP will be verified for appropriateness and documented as to their source as well as any adjustments for site, escalation or location factors.

2.3.2.2 Unit Cost Analysis Method

The estimated unit cost analysis method is typically used to develop costs for complex construction elements including but not limited to viaducts, retained earth systems, tunneling and underground structures. This method allows for unit costs to be developed based on current local construction and market conditions, such as changes which might affect productivity or the cost of labor or materials. The following steps are required in order to develop a unit price using this method:

- Analyze the proposed construction conditions
- Estimate production rates where applicable
- Obtain materials prices using local available sources
- Determine labor and equipment rates where applicable
- Calculate direct unit price using the above factors

The following sources are used to obtain basic cost data that is input into the database estimating program in order to develop any needed construction unit prices:

- Labor Rates – RS Means national wages adjusted by City Cost Index factor, Federal Davis-Bacon Wage Determination and/or California Department of Industrial Relations Prevailing Wage Determinations.
- Equipment Rates – RS Means and/or Corp of Engineers Construction Equipment Ownership and Operating Expense Schedule, Region VII.
- Material Prices - Material and supply prices for locally available material are obtained from local supplier quotes, if possible. Secondary sources of material cost data may be taken from RS Means, Engineering News-Report (ENR) or other published resource.

A list of prototypical work elements and the units of measure are estimated for PEPD Design level with corresponding estimated unit cost. Appendix A presents the list of variable cost elements within each FRA SCC 10's to 60's series. When required, additional project-specific work elements reflecting unique site conditions and configurations are identified and their estimated costs are developed in addition to prototypical unit costs. Examples of these project-specific unit costs include very high and/or long span iconic bridge structures, grade separations, specific roadway improvements, unique utility relocations, staged construction to accommodate existing rail or vehicular traffic, or restrictive site access conditions in urban areas.

2.3.3 Quantity Takeoffs

The task of quantity takeoffs involves preparation of estimated quantities either by direct measurement and calculation of construction elements that are shown in design drawings, sketches, electronically calculated from CADD files or established as an allowance quantity based on professional experience and judgment. Quantity take-offs have been prepared by the Regional Consultant and are presented in the San Jose to Merced PEPD quantities document "JM 2021_PEPD_AppA-Qty-v11_20211108."

2.3.4 Allocated and Unallocated Contingencies

Contingency, in the statistical sense, is the estimated percentage by which a calculated value may differ from its true or final value and is typically included in an estimate as an allowance for the level of engineering design completion or to address imperfections in the estimating methods used at the various project development stages. Contingency is typically added to a particular item or group of items by the use of percentage multipliers. Contingency is generally greatest for the early stage of project development and decreases with advancement in the level of engineering design and pricing detail. During the preliminary design of the high-speed rail project, the limited level of design information that is available requires the use of contingency allowances that are allocated against specific construction or procurement cost categories. The percentage selected for a given cost category are generally based on level of definition of the scope of work involved and substantiated by professional judgment and experience relative to level of uncertainty and historical cost variability typically seen for work within a particular cost category. For the purposes of this estimating program, contingency is assigned into two major categories – allocated and unallocated.

Allocated contingency is added to each cost category based on an assessment of the quality of design information; means and methods; and site accessibility available for individual items of work. This contingency typically falls in a range of 10% to 25%. The exact percentage selected for each cost category is based on professional judgment and experience related to the cost variability typically seen for items of work within a particular cost category. The contingency is generally higher for underground elements reflecting the additional exposure for unknowns as well as the construction complexity. It is also higher for stations, terminals, storage yard facilities and utilities since their design progress is still in the conceptual level and identification of all the utilities are not determined. The percentages shown in Table 2-1 are the values that are normally used; however, slightly higher or lower values are used if a project-specific condition warrant.

Unallocated contingency is typically included to address uncertainties that are more global in nature like schedule delays, changes in contracting environment, or other such issues that are not associated with individual construction activities. Unallocated contingencies will be estimated at 5 percent of the total construction costs.

Table 2-1 Allocated Contingency Percentages by Cost Category

Cost Category No.	Description	Allocated Contingency Percentage
10 Track Structures and Track		
10.01	Track structure: Viaduct	15%
10.02	Track structure: Major/Movable bridges	15%
10.03	Track structure: Under grade bridges	15%
10.04	Track structure: Culverts and drainage structures	15%
10.05	Track structure: Cut and Fill (> 4' height/depth)	20%
10.06	Track structure: At-grade (grading and subgrade stabilization)	10%
10.07	Track structure: Tunnel	25%
10.08	Track structure: Retaining walls and systems	15%
10.09	Track new construction: Conventional ballasted	15%
10.10	Track new construction: Non-ballasted	15%
10.11	Track rehabilitation: Ballast and surfacing	15%
10.12	Track rehabilitation: Ditching and drainage	15%
10.13	Track rehabilitation: Component replacement (rail, ties, etc)	15%
10.14	Track: Special track work (switches, turnouts, insulated joints)	15%
10.15	Track: Major interlocking	15%
10.16	Track: Switch heaters (with power and control)	15%
10.17	Track: Vibration and noise dampening	15%
10.18	Other linear structures including fencing, sound walls	15%
20 Stations, Terminals, Intermodal		25%
30 Support Facilities: Yards, Shops, Admin. Bldgs		25%
40 Sitework, Right of Way, Land, Existing Improvements		
40.01	Demolition, clearing, site preparation	25%
40.02	Site utilities, utility relocation	25%
40.03	Hazardous material, contaminated soil removal/mitigation, ground water treatments	15%
40.04	Environmental mitigation: wetlands, historic/archeology, parks	20%
40.05	Site structures including retaining walls, sound walls	25%
40.06	Temporary facilities and other indirect costs during construction	10%

40.07	Purchase or lease of real estate	40%
40.08	Highway/pedestrian overpass/grade separations	20%
40.09	Relocation of existing households and businesses	0%
50 Communications & Signaling		15%
60 Electric Traction		15%
70 Vehicles		0%
80 Professional Services		0%

2.3.5 Environmental Mitigation

An allowance to account for the cost of environmental mitigation that relates to hydrology and water resources; wetland impact; hazardous material and waste; historic/archeology; safety and security; noise, vibration and air quality during construction and permanent aesthetic is included in the total capital cost. This allowance is based on 3% of the total cost of track structures, track work, station buildings, roadway modification and highway grade separation.

2.3.6 Right-of-Way Cost Estimate

This involves preparing estimated quantities of impacted properties, either permanent takes or temporary easements, which result from construction, operation, and maintenance of proposed high-speed rail alignment alternatives. In order to arrive at the estimated cost, professional experience and judgment in the area of property valuation, business damages, and legal and administrative issues as they relate to the estimation of right-of-way costs have been applied. The values used in the cost estimate were developed by the Regional consultant to reflect the design changes “JM-ENG-RS-RPRT-RW-20211011.”

2.3.7 Vehicle Estimate

The costs for the San Jose to Merced section do not include acquisition of high-speed train vehicles. Acquisition of trainsets is considered to be a system-wide procurement and is not associated with construction of individual sections of the CHSRP System. Consistent with the Revised 2016 Business Plan, the cost of vehicles was determined by using publicly available data regarding recent sales of comparable equipment to other CHSRP projects around the world and by informal consultations with the manufacturers.

2.3.8 Program Implementation/Professional Services Add-ons

Program Implementation costs are included to represent the costs of engineering, project and construction management, contract administration, permits and fees, training/start-up/testing and any force account work. These add-on costs are calculated as a percentage of construction costs only (applied individually and not cumulatively and excluding vehicle procurement and right-of-way costs) and presented under Professional Services cost category in the estimate. The management and administration cost associated with right-of-way and rolling stock are included with the respective items.

Preliminary Engineering	2.0%
Program Management	3.0%
Final Design	6.0%
Construction Management	4.0%
Agency Costs	0.5%
Total	15.5%

In addition, an allowance for system start-up and pre-revenue testing is added to the Professional Services cost category in the amount of 6% of the Train Controls, Communications and Electrification construction costs.

2.3.9 Escalation

Estimates are prepared in Base Year dollars with the Base Year defined as the current calendar year. Unit costs are updated annually or as required. For cost estimates with a base year that is older than the current calendar by one or more years, actual historical construction cost index values are used to calculate the escalation rate to be applied to bring a cost from the period in question to the present.

2.3.10 Finance Charge

Finance charges are not included in the capital cost estimates.

2.4 Estimate Validation

Following preparation of the PEPD Design level estimates, cost estimates are subjected to a validation process including reviews by subject matter experts in the areas of engineering and construction.

2.5 Estimate Reconciliation

Reconciliations are made between current cost estimates and cost estimates that were developed in previous design phases. The goal of reconciliation is to identify and document significant changes that may have occurred since the preparation of the prior capital cost estimate. Significant changes are identified in the reconciliation under one of three categories that best reflects the cause for the change: Quantity, Unit Price, or Scope, as applicable.

2.6 Estimate Assumption and Exclusions

- All costs are in 2021$ Q4.
- Allocated Contingency is included in all costs.
- ROW costs have been included based on current ROW report as referenced in the list of documents from the RC. A high value is taken into consideration for the estimate.
- ROW costs do not include costs for an agreement or procurement of ROW with railroads within the shared corridor.

- Subsection SS99 Complete contains alternative wide elements that cannot be assigned to a specific subsection such as professional services, ROW, systems, and unallocated contingency in the Appendix C detailed estimate tables.

APPENDIX A WORK BREAKDOWN STRUCTURE (WBS)

WORK BREAKDOWN STRUCTURE (FRA STANDARD COST CATEGORIES)

10 TRACK STRUCTURES & TRACK	
10.01	Track structure: Viaduct
10.02	Track structure: Major/Movable bridge
10.03	Track structure: Under grade Bridges
10.04	Track structure: Culverts and drainage structures
10.05	Track structure: Cut and Fill (> 4' height/depth)
10.06	Track structure: At-grade (grading and subgrade stabilization)
10.07	Track structure: Tunnel
10.08	Track structure: Retaining walls and systems
10.09	Track new construction: Conventional ballasted
10.10	Track new construction: Non-ballasted
10.11	Track rehabilitation: Ballast and surfacing
10.12	Track rehabilitation: Ditching and drainage
10.13	Track rehabilitation: Component replacement (rail, ties, etc)
10.14	Track: Special track work (switches, turnouts, insulated joints)
10.15	Track: Major interlockings
10.16	Track: Switch heaters (with power and control)
10.17	Track: Vibration and noise dampening
10.18	Other linear structures including fencing, sound walls
20 STATIONS, TERMINALS, INTERMODAL	
20.01	Station buildings: Intercity passenger rail only
20.02	Station buildings: Joint use (commuter rail, intercity bus)
20.03	Platforms
20.04	Elevators, escalators
20.05	Joint commercial development
20.06	Pedestrian / bike access and accommodation, landscaping, parking lots
20.07	Automobile, bus, van accessways including roads
20.08	Fare collection systems and equipment
20.09	Station security

30 SUPPORT FACILITIES: YARDS, SHOPS, ADMIN. BLDGS	
30.01	Administration building: Office, sales, storage, revenue counting
30.02	Light maintenance facility
30.03	Heavy maintenance facility
30.04	Storage or maintenance-of-way building/bases
30.05	Yard and yard track
40 SITEWORK, RIGHT OF WAY, LAND, EXISTING IMPROVEMENTS	
40.01	Demolition, clearing, site preparation
40.02	Site utilities, utility relocation
40.03	Hazardous material, contaminated soil removal/mitigation, ground water treatments
40.04	Environmental mitigation: wetlands, historic/archeology, parks
40.05	Site structures including retaining walls, sound walls
40.06	Temporary facilities and other indirect costs during construction
40.07	Purchase or lease of real estate
40.08	Highway/pedestrian overpass/grade separations
40.09	Relocation of existing households and businesses
50 COMMUNICATIONS & SIGNALING	
50.01	Wayside signaling equipment
50.02	Signal power access and distribution
50.03	On-board signaling equipment
50.04	Traffic control and dispatching systems
50.05	Communications
50.06	Grade crossing protection
50.07	Hazard detectors: dragging equipment high water, slide, etc.
50.08	Station train approach warning system
60 ELECTRIC TRACTION	
60.01	Traction power transmission: High voltage
60.02	Traction power supply: Substations
60.03	Traction power distribution: Catenary and third rail
60.04	Traction power control
70 VEHICLES	
70.00	Vehicle acquisition: Electric locomotive
70.01	Vehicle acquisition: Non-electric locomotive

70.02	Vehicle acquisition: Electric multiple unit
70.03	Vehicle acquisition: Diesel multiple unit
70.04	Vehicle acquisition: Loco-hauled passenger cars w/ ticketed space
70.05	Vehicle acquisition: Loco-hauled passenger cars w/o ticketed space
70.06	Vehicle acquisition: Maintenance of way vehicles
70.07	Vehicle acquisition: Non-railroad support vehicles
70.08	Vehicle refurbishment: Electric locomotive
70.09	Vehicle refurbishment: Non-electric locomotive
70.10	Vehicle refurbishment: Electric multiple unit
70.11	Vehicle refurbishment: Diesel multiple unit
70.12	Vehicle refurbished: Passenger loco-hauled car w/ ticketed space
70.13	Vehicle refurbished: Non-passenger loco-hauled car w/o ticketed space
70.14	Vehicle refurbishment: Maintenance of way vehicles
70.15	Spare parts
80 PROFESSIONAL SERVICES (applies to Cats. 10 60)	
80.01	Service Development Plan/Service Environmental
80.02	Preliminary Engineering/Project Environmental
80.03	Final design
80.04	Project management for design and construction
80.05	Construction administration & management
80.06	Professional liability and other non-construction insurance
80.07	Legal; Permits; Review Fees by other agencies, cities, etc.
80.08	Surveys, testing, investigation
80.09	Engineering inspection
80.10	Start up
90 UNALLOCATED CONTINGENCY	
100 FINANCE CHARGES	

APPENDIX B TYPICAL UNIT COST ELEMENTS

No.	DESCRIPTION	UNIT
10.01	**Track structure: Viaduct**	
10.01.122	Elevated Structure - 1 Track (20' Avg. Pier Ht)	Route Mile
10.01.123	Elevated Structure - 1 Track (30' Avg. Pier Ht)	Route Mile
10.01.124	Elevated Structure - 1 Track (40' Avg. Pier Ht)	Route Mile
10.01.125	Elevated Structure - 1 Track (50' Avg. Pier Ht)	Route Mile
10.01.126	Elevated Structure - 1 Track (60' Avg. Pier Ht)	Route Mile
10.01.127	Elevated Structure - 1 Track (70' Avg. Pier Ht)	Route Mile
10.01.222	Elevated Structure - 2 Track (20' Avg. Pier Ht)	Route Mile
10.01.223	Elevated Structure - 2 Track (30' Avg. Pier Ht)	Route Mile
10.01.224	Elevated Structure - 2 Track (40' Avg. Pier Ht)	Route Mile
10.01.225	Elevated Structure - 2 Track (50' Avg. Pier Ht)	Route Mile
10.01.226	Elevated Structure - 2 Track (60' Avg. Pier Ht)	Route Mile
10.01.227	Elevated Structure - 2 Track (70' Avg. Pier Ht)	Route Mile
10.01.242	Elevated Structure - 4 Track (20' Avg. Pier Ht)	Route Mile
10.01.243	Elevated Structure - 4 Track (30' Avg. Pier Ht)	Route Mile
10.01.244	Elevated Structure - 4 Track (40' Avg. Pier Ht)	Route Mile
10.01.245	Elevated Structure - 4 Track (50' Avg. Pier Ht)	Route Mile
10.01.246	Elevated Structure - 4 Track (60' Avg. Pier Ht)	Route Mile
10.01.247	Elevated Structure - 4 Track (70' Avg. Pier Ht)	Route Mile
10.01.322	Elevated Structure (LS) - 1 Track (20' Avg. Pier Ht)	Route Mile
10.01.323	Elevated Structure (LS) - 1 Track (30' Avg. Pier Ht)	Route Mile
10.01.324	Elevated Structure (LS) - 1 Track (40' Avg. Pier Ht)	Route Mile
10.01.325	Elevated Structure (LS) - 1 Track (50' Avg. Pier Ht)	Route Mile
10.01.326	Elevated Structure (LS) - 1 Track (60' Avg. Pier Ht)	Route Mile
10.01.327	Elevated Structure (LS) - 1 Track (70' Avg. Pier Ht)	Route Mile
10.01.422	Elevated Structure (LS) - 2 Track (20' Avg. Pier Ht)	Route Mile
10.01.423	Elevated Structure (LS) - 2 Track (30' Avg. Pier Ht)	Route Mile
10.01.424	Elevated Structure (LS) - 2 Track (40' Avg. Pier Ht)	Route Mile
10.01.425	Elevated Structure (LS) - 2 Track (50' Avg. Pier Ht)	Route Mile
10.01.426	Elevated Structure (LS) - 2 Track (60' Avg. Pier Ht)	Route Mile
10.01.427	Elevated Structure (LS) - 2 Track (70' Avg. Pier Ht)	Route Mile
10.01.431	Elevated Structure (LS-Tall) - 2-Single Tracks (110' Avg. Pier Ht)	Route Mile

No.	DESCRIPTION	UNIT
10.01.432	Elevated Structure (LS-Tall) - 2-Single Tracks (120' Avg. Pier Ht)	Route Mile
10.01.512	Elevated Structure Straddle over 2 RR - 1 Track (20' Avg. Pier Ht)	Route Mile
10.01.513	Elevated Structure Straddle over 2 RR - 1 Track (30' Avg. Pier Ht)	Route Mile
10.01.514	Elevated Structure Straddle over 2 RR - 1 Track (40' Avg. Pier Ht)	Route Mile
10.01.515	Elevated Structure Straddle over 2 RR - 1 Track (50' Avg. Pier Ht)	Route Mile
10.01.522	Elevated Structure Straddle over 2 RR - 2 Track (20' Avg. Pier Ht)	Route Mile
10.01.523	Elevated Structure Straddle over 2 RR - 2 Track (30' Avg. Pier Ht)	Route Mile
10.01.524	Elevated Structure Straddle over 2 RR - 2 Track (40' Avg. Pier Ht)	Route Mile
10.01.525	Elevated Structure Straddle over 2 RR - 2 Track (50' Avg. Pier Ht)	Route Mile
10.01.612	Elevated Structure Straddle over 4 RR - 1 Track (20' Avg. Pier Ht)	Route Mile
10.01.613	Elevated Structure Straddle over 4 RR - 1 Track (30' Avg. Pier Ht)	Route Mile
10.01.614	Elevated Structure Straddle over 4 RR - 1 Track (40' Avg. Pier Ht)	Route Mile
10.01.615	Elevated Structure Straddle over 4 RR - 1 Track (50' Avg. Pier Ht)	Route Mile
10.01.622	Elevated Structure Straddle over 4 RR - 2 Track (20' Avg. Pier Ht)	Route Mile
10.01.623	Elevated Structure Straddle over 4 RR - 2 Track (30' Avg. Pier Ht)	Route Mile
10.01.624	Elevated Structure Straddle over 4 RR - 2 Track (40' Avg. Pier Ht)	Route Mile
10.01.625	Elevated Structure Straddle over 4 RR - 2 Track (50' Avg. Pier Ht)	Route Mile
10.01.944	Elevated Structure - 2 Track w/ 2 Single Trenches	Route Mile
10.02	**Track structure: Major/Movable bridge**	
10.02.013	Bridge Structure - 3 span with 1 Track	Route Mile
10.02.023	Bridge Structure - 3 span with 2 Track	Route Mile
10.02.043	Bridge Structure - 3 span with 4 Track	Route Mile
10.05	**Track structure: Cut and Fill (> 4' height/depth)**	
10.05.111	At-Grade Track-bed in Cut - 1 Track (5' Avg. Exc Depth)	Route Mile

No.	DESCRIPTION	UNIT
10.05.112	At-Grade Track-bed in Cut - 1 Track (10' Avg. Exc Depth)	Route Mile
10.05.113	At-Grade Track-bed in Cut - 1 Track (15' Avg. Exc Depth)	Route Mile
10.05.114	At-Grade Track-bed in Cut - 1 Track (20' Avg. Exc Depth)	Route Mile
10.05.121	At-Grade Track-bed in Cut - 2 Track (5' Avg. Exc Depth)	Route Mile
10.05.122	At-Grade Track-bed in Cut - 2 Track (10' Avg. Exc Depth)	Route Mile
10.05.123	At-Grade Track-bed in Cut - 2 Track (15' Avg. Exc Depth)	Route Mile
10.05.124	At-Grade Track-bed in Cut - 2 Track (20' Avg. Exc Depth)	Route Mile
10.05.126	At-Grade Track-bed in Cut - 2 Track (40' Avg. Exc Depth)	Route Mile
10.05.128	At-Grade Track-bed in Cut - 2 Track (60' Avg. Exc Depth)	Route Mile
10.05.130	At-Grade Track-bed in Cut - 2 Track (80' Avg. Exc Depth)	Route Mile
10.05.132	At-Grade Track-bed in Cut - 2 Track (100' Avg. Exc Depth)	Route Mile
10.05.211	At-Grade Track-bed in Fill - 1 Track (5' Avg. Fill Ht)	Route Mile
10.05.212	At-Grade Track-bed in Fill - 1 Track (10' Avg. Fill Ht)	Route Mile
10.05.213	At-Grade Track-bed in Fill - 1 Track (15' Avg. Fill Ht)	Route Mile
10.05.214	At-Grade Track-bed in Fill - 1 Track (20' Avg. Fill Ht)	Route Mile
10.05.221	At-Grade Track-bed in Fill - 2 Track (5' Avg. Fill Ht)	Route Mile
10.05.222	At-Grade Track-bed in Fill - 2 Track (10' Avg. Fill Ht)	Route Mile
10.05.223	At-Grade Track-bed in Fill - 2 Track (15' Avg. Fill Ht)	Route Mile
10.05.224	At-Grade Track-bed in Fill - 2 Track (20' Avg. Fill Ht)	Route Mile
10.05.226	At-Grade Track-bed in Fill - 2 Track (40' Avg. Fill Ht)	Route Mile
10.05.228	At-Grade Track-bed in Fill - 2 Track (60' Avg. Fill Ht)	Route Mile
10.05.230	At-Grade Track-bed in Fill - 2 Track (80' Avg. Fill Ht)	Route Mile
10.05.232	At-Grade Track-bed in Fill - 2 Track (100' Avg. Fill Ht)	Route Mile
10.06	**Track structure: At-grade (grading and subgrade stabilization)**	
10.06.210	At-Grade Track-bed with Closed Drainage - 1 Track	Route Mile
10.06.220	At-Grade Track-bed with Closed Drainage - 2 Track	Route Mile
10.06.230	At-Grade Track-bed with Closed Drainage - 3 Track	Route Mile
10.06.240	At-Grade Track-bed with Closed Drainage - 4 Track	Route Mile
10.07	**Track structure: Tunnel**	
10.07.101	TBM Single Track Twin Tunnel 30ft ID Unpressurized TBM in hard rock	Route Mile
10.07.102	TBM Single Track Twin Tunnel 30ft ID Slurry TBM in hard rock	Route Mile
10.07.103	TBM Single Track Twin Tunnel 30ft ID in soft ground	Route Mile
10.07.104	TBM Double Track Tunnel 50ft ID in soft ground	Route Mile

No.	DESCRIPTION	UNIT
10.07.105	TBM Double Track Tunnel 40ft ID in soft ground	Route Mile
10.07.201	D&B Single Track Twin Tunnel 30ft ID in hard rock	Route Mile
10.07.202	D&B Single Track Twin Tunnel 30ft ID in rock	Route Mile
10.07.203	D&B Double Track Tunnel 40ft ID in hard rock	Route Mile
10.07.204	D&B Double Track Tunnel 40ft ID in rock	Route Mile
10.07.205	D&B Double Track Tunnel 50ft ID in hard rock	Route Mile
10.07.206	D&B Double Track Tunnel 50ft ID in rock	Route Mile
10.07.301	SEM Single Track Twin Tunnel 30ft ID in soft ground	Route Mile
10.07.302	SEM Single Track Twin Tunnel 30ft ID in soft ground	Route Mile
10.07.303	SEM Double Track Tunnel 40ft ID in soft ground	Route Mile
10.07.304	SEM Double Track Tunnel 40ft ID in soft ground	Route Mile
10.07.305	SEM Double Track Tunnel 50ft ID in soft ground	Route Mile
10.07.306	SEM Double Track Tunnel 50ft ID in soft ground	Route Mile
10.07.401	RH Single Track Twin Tunnel 30ft ID in soft rock	Route Mile
10.07.402	RH Single Track Twin Tunnel 30ft ID in soft rock	Route Mile
10.07.403	RH Double Track Tunnel 40ft ID in soft rock	Route Mile
10.07.404	RH Double Track Tunnel 40ft ID in soft rock	Route Mile
10.07.405	RH Double Track Tunnel 50ft ID in soft rock	Route Mile
10.07.406	RH Double Track Tunnel 50ft ID in soft rock	Route Mile
10.07.207	D&B Cross Passage conservative cost in rock	Linear Feet
10.07.407	RH Cross Passage conservative cost in soft rock	Linear Feet
10.07.501	Cross Passage in Soft Ground	Linear Feet
10.07.502	Cross Passage in Soft Ground, including jet grout	Linear Feet
10.07.114	Cut & Cover Box - 1 Track/ 1 Box (40' Avg. Exc Depth)	Route Mile
10.07.115	Cut & Cover Box - 1 Track/ 1 Box (50' Avg. Exc Depth)	Route Mile
10.07.116	Cut & Cover Box - 1 Track/ 1 Box (60' Avg. Exc Depth)	Route Mile
10.07.214	Cut & Cover Box - 2 Track / 1 Box (40' Avg. Exc Depth)	Route Mile
10.07.215	Cut & Cover Box - 2 Track / 1 Box (50' Avg. Exc Depth)	Route Mile
10.07.216	Cut & Cover Box - 2 Track / 1 Box (60' Avg. Exc Depth)	Route Mile
10.07.224	Cut & Cover Box - 2 Track/ 2 Box (40' Avg. Exc Depth)	Route Mile
10.07.225	Cut & Cover Box - 2 Track / 2 Box (50' Avg. Exc Depth)	Route Mile
10.07.226	Cut & Cover Box - 2 Track / 2 Box (60' Avg. Exc Depth)	Route Mile
10.07.414	Cut & Cover Box - 4 Track / 1 Box (40' Avg. Exc Depth)	Route Mile
10.07.415	Cut & Cover Box - 4 Track / 1 Box (50' Avg. Exc Depth)	Route Mile
10.07.416	Cut & Cover Box - 4 Track / 1 Box (60' Avg. Exc Depth)	Route Mile

No.	DESCRIPTION	UNIT
10.07.801	Ventilation Shaft	VF
10.07.802	Mid-Line Ventilation Structure	LS
10.07.803	Tunnel Portal Structure	LS
10.07.805	Emergency Access Shaft	VF
10.07.850	Pumping Station	EA
10.07.901	Mechanical & Electrical Allowance for Underground (Single)	Route Mile
10.07.902	Mechanical & Electrical Allowance for Underground (Double)	Route Mile
10.07.920	Ventilation Equipment Allowance	EA
10.07.922	Double Deck - 2 Track Trench on Top of 2 Track C&C Box	Route Mile
10.07.950	Allowance for Construction Monitoring	Route Mile
10.08	**Track structure: Retaining walls and systems**	
10.08.211	Retained Cut, Trench - 1 Track (10' Avg. Exc Depth)	Route Mile
10.08.212	Retained Cut, Trench - 1 Track (20' Avg. Exc Depth)	Route Mile
10.08.213	Retained Cut, Trench - 1 Track (30' Avg. Exc Depth)	Route Mile
10.08.221	Retained Cut, Trench - 2 Track (10' Avg. Exc Depth)	Route Mile
10.08.222	Retained Cut, Trench - 2 Track (20' Avg. Exc Depth)	Route Mile
10.08.223	Retained Cut, Trench - 2 Track (30' Avg. Exc Depth)	Route Mile
10.08.241	Retained Cut, Trench - 4 Track (10' Avg. Exc Depth)	Route Mile
10.08.242	Retained Cut, Trench - 4 Track (20' Avg. Exc Depth)	Route Mile
10.08.243	Retained Cut, Trench - 4 Track (30' Avg. Exc Depth)	Route Mile
10.08.344	Retained Cut, Staged Trench - 4 Track (40' Avg. Exc Depth)	Route Mile
10.08.346	Retained Cut, Staged Trench - 4 Track (60' Avg. Exc Depth)	Route Mile
10.08.411	Retained Fill, Walls Both Sides - 1 Tracks (10' Avg. Wall Ht)	Route Mile
10.08.412	Retained Fill, Walls Both Sides - 1 Tracks (20' Avg. Wall Ht)	Route Mile
10.08.413	Retained Fill, Walls Both Sides - 1 Tracks (30' Avg. Wall Ht)	Route Mile
10.08.421	Retained Fill, Walls Both Sides - 2 Tracks (10' Avg. Wall Ht)	Route Mile
10.08.422	Retained Fill, Walls Both Sides - 2 Tracks (20' Avg. Wall Ht)	Route Mile
10.08.423	Retained Fill, Walls Both Sides - 2 Tracks (30' Avg. Wall Ht)	Route Mile
10.09	**Track new construction: Conventional ballasted**	
10.09.110	Ballasted Track - 1 Track	Route Mile
10.09.112	Ballasted Track (Track Laying Machine) - 1 Track	Route Mile
10.09.120	Ballasted Track - 2 Track	Route Mile
10.09.122	Ballasted Track (Track Laying Machine) - 2 Track	Route Mile
10.09.240	Ballasted Track - 2 Track (Station Track)	Route Mile
10.09.810	Ballasted Freight Track - 1 Track	Route Mile

No.	DESCRIPTION	UNIT
10.09.820	Ballasted Freight Track - 2 Track	Route Mile
10.09.910	Ballasted Track Relocation - 1 Track (Temporary)	Route Mile
10.09.920	Ballasted Track Relocation - 1 Track (Permanent)	Route Mile
10.10	**Track new construction: Non-ballasted**	
10.10.110	Direct Fixation Track - 1 Track	Route Mile
10.10.120	Direct Fixation Track - 2 Track	Route Mile
10.10.140	Direct Fixation Track - 4 Track	Route Mile
10.10.210	Independent Dual Block Track - 1 Track	Route Mile
10.10.220	Independent Dual Block Track - 2 Track	Route Mile
10.10.240	Independent Dual Block Track - 4 Track	Route Mile
10.14	**Track: Special track work (switches, turnouts, insulated joints)**	
10.14.100	Direct Fixation Turnout (60 MPH)	EA
10.14.105	Direct Fixation Turnout (80 MPH)	EA
10.14.110	Direct Fixation Turnout (110 MPH)	EA
10.14.115	Direct Fixation Turnout (150 MPH)	EA
10.14.130	Direct Fixation Crossover (60 MPH)	EA
10.14.135	Direct Fixation Crossover (80 MPH)	EA
10.14.140	Direct Fixation Crossover (110 MPH)	EA
10.14.145	Direct Fixation Crossover (150 MPH)	EA
10.14.200	Ballasted Turnout (60 MPH)	EA
10.14.205	Ballasted Turnout (80 MPH)	EA
10.14.210	Ballasted Turnout (110 MPH)	EA
10.14.215	Ballasted Turnout (150 MPH)	EA
10.14.300	Ballasted Crossover (60 MPH)	EA
10.14.305	Ballasted Crossover (80 MPH)	EA
10.14.310	Ballasted Crossover (110 MPH)	EA
10.14.315	Ballasted Crossover (150 MPH)	EA
10.14.400	Terminal - Bumping Post	
20.01	**Station buildings: Intercity passenger rail only**	
20.01.105	Millbrae Station	LS
20.01.105	Millbrae Station - Site Elements	LS
20.02.200	Redwood/Palo Alto Station	LS
20.02.201	Redwood/Palo Alto Station - Site Elements	LS
20.02.215	Gilroy Station	LS

No.	DESCRIPTION	UNIT
20.02.216	Gilroy Station - Site Elements	LS
20.02.225	San Jose Station	LS
20.02.226	San Jose Station-Site Elements	LS
20.01.100	Artic Station	LS
20.01.110	LA Union Station	LS
20.02.205	Norwalk Station	LS
20.02.206	Norwalk Station - Site Elements	LS
20.02.210	Tulare Station	LS
20.02.211	Tulare Station - Site Elements	LS
20.02.220	Burbank Station	LS
20.02.221	Burbank Station - Site Elements	LS
20.02.230	Merced Station	LS
20.02.231	Merced Station - Site Elements	LS
20.02.235	Fresno Station	LS
20.02.236	Fresno Station - Site Elements	LS
20.02.240	Bakersfield Station	LS
20.02.241	Bakersfield Station - Site Elements	LS
20.02.245	Palmdale Station	LS
20.02.246	Palmdale Station - Site Elements	LS
20.02.250	Sylmar Station	LS
20.02.251	Sylmar Station - Site Elements	LS
20.06	**Pedestrian / bike access and accommodation, landscaping, parking lots**	
20.06.120	Pedestrian Access (Cut & Cover)	LF
20.06.140	Pedestrian Plaza	SF
20.06.160	Pedestrian Access, Vertical Structure, 30' Height	EA
20.06.210	Parking - At Grade	STL
20.06.250	Parking - Structured (Above Grade)	STL
20.06.800	Landscaping Allowance	SF
20.06.810	Landscaping Allowance, Guideway	Route Mile
20.07	**Automobile, bus, van accessways including roads**	
20.07.010	Roadway Modification, New AC Paving	SF
20.07.020	Roadway Modification, New AC Paving (including Curb & Sidewalk)	SF
20.07.710	Permanent Service/Emergency Access Road (20' Wide)	Route Mile

No.	DESCRIPTION	UNIT
20.07.715	Access Road Entrance Point	EA
20.07.800	Streetscaping Allowance	ESF
30.02	**Light maintenance facility**	
30.02.010	Light Maintenance Facility (LMF)	EA
30.03	**Heavy maintenance facility**	
30.03.010	Heavy Maintenance Facility (HMF)	EA
30.04	**Storage or maintenance-of-way building/bases**	
30.04.010	Maintenance of Way Facility (MOWF)	EA
30.05	**Yard and yard track**	
30.05.110	Ballasted Track - Yard Track	Route Mile
30.05.200	Ballasted Turnout, No. 15	EA
30.05.210	Ballasted Diamond Crossover, No. 15	EA
30.05.250	Heavy Duty Rubber Grade Crossing	TF
40.01	**Demolition, clearing, site preparation**	
40.01.010	Demolition Allowance, Bridge	SF
40.01.050	Demolition Allowance, Building (1 Story)	SF
40.01.060	Demolition Allowance, Building (2 Story)	SF
40.01.110	Demolition Allowance, Asphalt Pavement	SY
40.01.140	Demolition Allowance, Concrete Curb	LF
40.01.150	Demolition Allowance, Concrete Sidewalk	SY
40.01.810	Demolition Allowance, Remove Railroad Track	Route Mile
40.01.900	Miscellaneous Excavation & Support Items	LS
40.02	**Site utilities, utility relocation**	
40.02.001	Utility Relocation Allowance, Level 1	Route Mile
40.02.002	Utility Relocation Allowance, Level 2	Route Mile
40.02.003	Utility Relocation Allowance, Level 3	Route Mile
40.02.004	Utility Relocation Allowance, Level 4	Route Mile
40.02.005	Utility Relocation Allowance, Level 5	Route Mile
40.02.050	Site Utility Allowance	Route Mile
40.03	**Hazardous material, contaminated soil removal/mitigation, ground water treatments**	
40.03.100	Hazardous Material Removal Allowance, Light	Route Mile
40.03.105	Hazardous Material Removal Allowance, Medium	Route Mile
40.03.110	Hazardous Material Removal Allowance, Heavy	Route Mile
40.03.150	Removal of Contaminated Soil	CF

No.	DESCRIPTION	UNIT
40.04	**Environmental mitigation: wetlands, historic/archeology, parks**	
40.04.100	Environmental Mitigation Allowance, Light	Route Mile
40.04.105	Environmental Mitigation Allowance, Medium	Route Mile
40.04.110	Environmental Mitigation Allowance, Heavy	Route Mile
40.05	**Site structures including retaining walls, sound walls**	
40.05.012	Retaining Wall - 1 Wall (12' Avg. Height)	LF
40.05.111	Containment (Crash) Wall - 1 Wall (6' Avg. Height Above Rail)	LF
40.05.120	Blast Wall (At Stations) - 1 Wall (20' Avg. Height Above Platform)	LF
40.05.211	Sound Wall - 1 Wall (8' Avg. Height)	LF
40.05.310	Intrusion Protection Berm	LF
40.06	**Temporary facilities and other indirect costs during construction**	
40.07	**Purchase or lease of real estate**	
	Right-of-Way Required for Segment	
40.07.100	Dense Urban	Acre
40.07.101	Urban	Acre
40.07.102	Dense Suburban	Acre
40.07.103	Suburban	Acre
40.07.104	Farmland	Acre
40.07.105	Undeveloped	Acre
	Right-of-Way Required for Stations and Maintenance Facilities	
40.07.200	Dense Urban	Acre
40.07.201	Urban	Acre
40.07.202	Dense Suburban	Acre
40.07.203	Suburban	Acre
40.07.204	Undeveloped	Acre
40.08	**Highway/pedestrian overpass/grade separations**	
40.08.322	Roadway Overcrossing HSR - 2 lane retained fill roadway over 2 tracks	EA
40.08.324	Roadway Overcrossing HSR - 4 lane retained fill roadway over 2 tracks	EA
40.08.326	Roadway Overcrossing HSR - 6 lane retained fill roadway over 2 tracks	EA

No.	DESCRIPTION	UNIT
40.08.342	Roadway Overcrossing HSR - 2 lane retained fill roadway over 4 tracks	EA
40.08.344	Roadway Overcrossing HSR - 4 lane retained fill roadway over 4 tracks	EA
40.08.346	Roadway Overcrossing HSR - 6 lane retained fill roadway over 4 tracks	EA
40.08.422	Roadway Overcrossing HSR - 2 lane roadway on embankment over 2 tracks	EA
40.08.424	Roadway Overcrossing HSR - 4 lane roadway on embankment over 2 tracks	EA
40.08.426	Roadway Overcrossing HSR - 6 lane roadway on embankment over 2 tracks	EA
50.01	**Wayside signaling equipment**	
50.01.010	Train Controls (ATC)	Route Mile
50.01.020	Wayside Protection System	Route Mile
50.01.030	Train Control, Wayside Facility Site Work	EA
50.05	**Communications**	
50.05.010	Communications (w/Fiber Optic Backbone)	Route Mile
60.02	**Traction power supply: Substations**	
60.02.100	Traction Power Supply	Route Mile
60.02.010	Traction Power, Supply Station Site Work	EA
60.02.020	Traction Power, Switching Station Site Work	EA
60.02.030	Traction Power, Paralleling Station Site Work	EA
60.03	**Traction power distribution: Catenary and third rail**	
60.03.100	Traction Power Distribution	Route Mile

APPENDIX C DETAILED COST BUDGET

APPENDIX 6-B: HIGH-SPEED RAIL OPERATING AND MAINTENANCE COST FOR USE IN EIR/EIS PROJECT-LEVEL ANALYSIS

Memorandum

DATE: February 6, 2017

TO: Regional Consultant Teams

FROM: Matt Henley, Travel Demand Forecasting Manager

CC: Bruce Armistead, Director, Operations & Maintenance
Simon Whitehorn, Deputy Director, Operations & Maintenance

SUBJECT: High-Speed Rail Operating and Maintenance Cost for Use in EIR/EIS Project-Level Analysis

---

This memo summarizes the assumptions used to estimate full system high-speed rail (HSR) operations and maintenance (O&M) costs published in the *California High-Speed Rail Authority's 2016 Business Plan*. For more information on the operations and maintenance cost model used for cost forecasting, please refer to the *Operations and Maintenance Cost Model Documentation*[1].

A variety of factors drive the cost forecasts, including but not limited to, service planning assumptions, station operations, maintenance facility operations, staffing and energy use. Allocated contingency costs, which are included in each cost category, and unallocated contingency costs are also forecasted in addition to direct O&M costs. In total, nine cost categories comprise total O&M costs that are described in detail in the *Operations and Maintenance Cost Model Documentation*:

1. Train operations
2. Dispatching
3. Maintenance of equipment
4. Maintenance of infrastructure
5. Station and train cleaning
6. Commercial
7. General and administrative
8. Insurance
9. Unallocated contingency

The service plan is a key driver of O&M cost forecasts as it determines the number of trainset miles, bus miles, trainsets, stations and maintenance facilities necessary to support system operations – all of which are inputs to the O&M cost model. The O&M cost forecasts in the *California High-Speed Rail Authority's 2016 Business Plan* rely on a Phase 1 system with key service planning assumptions outlined below:

- The Phase 1 system will open in 2029 and will cover approximately 500 miles
- The Phase 1 system will serve 13 stations, including San Francisco, Millbrae, San Jose, Gilroy, Merced, Fresno, Kings/Tulare, Bakersfield, Palmdale, Burbank, Los Angeles, Gateway Cities/ Orange County, Anaheim

[1] http://www.hsr.ca.gov/docs/about/business_plans/2016_Business_Plan_Operations_and_Maintenance_Cost_Model.pdf

- The Phase 1 system will include 196 revenue service train runs per day with varying stopping patterns between San Francisco and Anaheim, San Francisco and Los Angeles, San Jose and Los Angeles, Merced and Los Angeles, Merced and Anaheim

- The Phase 1 system assumes 6 hours of peak service and 10 hours of off-peak service daily. Phase 1 will include 8 round trip revenue service trains per hour during peak service and 5 round trip trains per hour during off-peak service

- The HSR system will include connecting bus service between Sacramento and Merced during Phase 1 operations

- After full operational ramp-up, high-speed rail operations will include 78 trainsets including spares, 34.5 million total trainset miles, and 2.2 million bus miles per year

To support Phase 1 high-speed train service outlined above, total O&M costs include additional assumptions related to maintenance and train operations. The system will include one operations control center and three terminal control facilities to manage dispatching. A heavy maintenance facility will be located in the Central Valley with three lighter maintenance facilities dispersed across the rest of the system, including one near Gilroy, one in northern California along the Peninsula Corridor at Brisbane and one in southern California, near Los Angeles. O&M will also include five maintenance of infrastructure facilities.

The O&M cost model assumes station staffing and operating costs will be based on station size and the model differentiates between three station sizes. San Francisco and Los Angeles represent the largest stations, and as a result, have the most staff. Other terminal stations represent the middle station sizes (e.g., San Jose) and intermediate stations (e.g., Palmdale) represent the smallest station size and have the lowest staffing levels. For more details on staffing assumptions and associated salaries, please refer to the *Operations and Maintenance Cost Model Documentation*.

Finally, energy costs were updated to $0.074 per kilowatt hour (2015 dollars) for the 2016 Business Plan and are a key driver of train operations costs and station costs based on usage.

Table 1 below outlines total O&M medium, or base case, cost forecasts and personnel forecasts by cost category. It is important to note that the cost model does not attempt to optimize operations to reduce costs, but provides an achievable operating scenario that could be further improved upon by a private operator. Additionally, the 2025 Valley-to-Valley (V2V) forecasts reflect a different set of assumptions than those outlined above for Phase 1, but are not covered in this memo. The cost model also assumes a ramp-up period from the opening of revenue service through five years after the system expands to Phase 1 (i.e., 2025-2033).

Table 1: Annual Operations and Maintenance Medium Case Cost Forecast ($2015 millions)

Cost Category	2025 Medium Case Cost	2029 Medium Case Cost	2040 Medium Case Cost	Personnel in PH1 System
Train Operations	$28	$240	$285	1,210
Dispatching	$13	$29	$30	187
Maintenance of Equipment	$22	$92	$134	603
Maintenance of Infrastructure	$53	$120	$122	579
Station and Train Cleaning	$21	$68	$71	649
Commercial	$42	$51	$94	N/A
General and Administrative	$14	$48	$53	311
Insurance	$26	$52	$52	N/A
Unallocated Contingency	$9	$29	$35	N/A
Total Cost	**$227**	**$730**	**$874**	**3,538**

Note: Numbers may not add due to rounding

As with all model forecasting, risks and uncertainties exist in model inputs and assumptions. For example, salaries or energy costs in 2040 may be lower or higher than those assumed in the model. The *California High-Speed Rail Authority's 2016 Business Plan* O&M forecasts include a Monte Carlo simulation to capture these risks and uncertainties by creating a forecast range with associated probabilities of occurrence. A high O&M cost forecast was developed to reflect the results of these Monte Carlo simulations. For more detail on the O&M risk analysis methodology, please refer to the *Operations and Maintenance Cost Model Documentation*.

The drawback of the methodology used for the O&M risk analysis is that it does not provide high scenarios for specific cost categories, but only identifies total O&M high scenario forecasts. As a result, to estimate high scenario costs by each cost category, medium cost category forecasts are multiplied by the percentage increase of total O&M costs from the medium to high scenario. In other words, if total high scenario costs are 10% higher than total medium costs, each cost category is multiplied by 1.10 to estimate high scenario costs by category.

Table 2 below outlines high scenario O&M costs.

Table 2: Annual Operations and Maintenance High Scenario Cost Forecast ($2015 millions)

Cost Category	2025 High Scenario Cost	2029 High Scenario Cost	2040 High Scenario Cost
Train Operations	$31	$263	$311
Dispatching	$14	$32	$33
Maintenance of Equipment	$24	$101	$146
Maintenance of Infrastructure	$58	$131	$133
Station and Train Cleaning	$23	$74	$77
Commercial	$46	$56	$103
General and Administrative	$15	$53	$58
Insurance	$29	$57	$57
Unallocated Contingency	$10	$32	$38
Total Cost	**$249**	**$798**	**$956**

Note: Numbers may not add due to rounding

For planning, engineering, and design purposes, the 500 mile Phase 1 HSR system has been divided into nine geographic sections. None of the sections would operate independently and any cost number associated with each is not meant to represent the cost to operate and maintain each as a standalone system; rather, geographic sections operate as part of an integrated system. However, to assist the regional teams in their evaluation of environmental impacts associated with future construction and operation of individual HSR projects, total O&M costs have been distributed to each geographic section.

O&M costs in 2015$ are apportioned to each geographic section based on the system-wide total cost per route mile. Table 3 below outlines the cost per route mile by year and scenario.

Table 3: Cost per Route Mile ($2015 millions)

Cost Category	Approx. Route Miles	2025 Medium Cost	2025 High Cost	2029 Medium Cost	2029 High Cost	2040 Medium Cost	2040 High Cost
Valley-to-Valley	250	$0.91/mi	$1.00/mi	N/A	N/A	N/A	N/A
Phase 1	500	N/A	N/A	$1.46/mi	$1.60/mi	$1.75/mi	$1.91/mi

O&M costs by geographic segment are distributed in Table 4 below and are estimated by multiplying costs per route mile by approximate route miles in each geographic section. It is important to note that the O&M costs above for the Valley-to-Valley system do not assume service to Merced. There are approximately 250 total route miles in the Valley-to-Valley system assumed for O&M cost forecasting purposes. Nonetheless, the cost per route mile calculated for Valley-to-Valley in Table 3 is applied to the

geographic segments that include Merced in 2025 in Table 4 (San Jose-Merced, Merced-Fresno). As a result, total 2025 medium and high cost numbers in Table 4 will be higher than Table 1 and Table 2.

Table 4: Annual Operations and Maintenance Costs by Geographic Segment ($2015 millions)

Cost Category	Approx. Route Miles	2025 Medium Cost	2025 High Cost	2029 Medium Cost	2029 High Cost	2040 Medium Cost	2040 High Cost
San Fran-San Jose	48	$0	$0	$70	$77	$84	$92
San Jose-Merced	84	$76	$84	$123	$134	$147	$161
Merced-Fresno	93	$84	$93	$136	$148	$163	$178
Fresno-Bakersfield	109	$99	$109	$159	$174	$191	$208
Bakersfield-Palmdale	80	$0	$0	$117	$128	$140	$153
Palmdale-Burbank	40	$0	$0	$58	$64	$70	$76
Burbank-Los Angeles	13	$0	$0	$19	$21	$23	$25
Los Angeles-Anaheim	31	$0	$0	$45	$49	$54	$59

Note: Total estimates in 2029 and 2040 scenarios may not match previous tables due to rounding.

APPENDIX 9-A: PUBLIC AND AGENCY MEETING LIST

Appendix A: Public and Agency Meetings List

Since publication of the Draft Environmental Impact Report (EIR)/Environmental Impact Statement (EIS), the following substantive changes have been made to this appendix.

- The list of meetings was updated to include additional public and agency meetings that have occurred.

Date	Organization/Individual	Topic
12/18/2008	City of San Jose	Project definition and environmental process
1/12/2009	Delmas Park Neighborhood Action Committee	Project definition and environmental process
2/18/2009	City of Gilroy	Project definition and environmental process
2/18/2009	City of Morgan Hill	Project definition and environmental process
2/19/2009	City of Los Banos	Project definition and environmental process
2/23/2009	Silverleaf, San Jose Neighborhood Association	Project definition and environmental process
2/25/2009	Gardner Advisory Council, San Jose	Project definition and environmental process
2/26/2009	Grassland Water District	Project definition and environmental process
2/28/2009	City of San Jose District 2 Town Hall	Project definition and environmental process
3/3/2009	Committee for Green Foothills, Greenbelt Alliance, TNC, Silicon Valley Land Trust, Audubon, Sierra Club	Project definition and environmental process
3/18/2009	Merced EIR/EIS Scoping Meeting	Statewide HSR system, environmental review process, project alternatives, areas of environmental analysis, potential key issues
3/24/2009	North Willow Glen, San Jose Neighborhood Association	Project definition and environmental process
3/25/2009	San Jose EIR/EIS Scoping Meeting	Statewide HSR system, environmental review process, project alternatives, areas of environmental analysis, potential key issues
3/26/2009	Gilroy EIR/EIS Scoping Meeting	Statewide HSR system, environmental review process, project alternatives, areas of environmental analysis, potential key issues
3/26/2009	TAMC	Project definition and environmental process
4/14/2009	City of Morgan Hill Planning Commission	Project definition and environmental process
4/29/2009	Greater Gardner, San Jose community meeting (Spanish and English)	Project definition and environmental process
9/3/2009	TWG Meeting #1 (Gilroy)	Project schedule and study process, alternatives analysis effort, summary of scoping comments, review of current alignment alternatives, review of alternatives analysis and key design objectives

Date	Organization/Individual	Topic
9/10/2009	TWG Meeting #1 (Merced)	Project schedule and study process, alternatives analysis effort, summary of scoping comments, review of current alignment alternatives, review of alternatives analysis and key design objectives
9/12/2009	Diridon Station Area Plan Visioning Workshop	PAA—environmental review process and alternative alignments
9/17/2009	City of Gilroy	PAA—environmental review process and alternative alignments
9/23/2009	USACE, USFWS, RWQCB, CDFG	PAA—environmental review process and alternative alignments
10/5/2009	City of San Jose	PAA—environmental review process and alternative alignments
10/5/2009	USEPA/USACE	PAA—environmental review process and alternative alignments
10/6/2009	Alternatives Analysis Public Meeting, San Jose	Alignment alternatives, impacts on neighborhoods and local roads, concerns about eminent domain and property values, impacts on agriculture
10/7/2009	City of Morgan Hill	PAA—environmental review process and alternative alignments
10/7/2009	The Nature Conservancy	PAA—environmental review process and alternative alignments
10/8/2009	Alternatives Analysis Public Meeting, Merced	Alignment alternatives, impacts on neighborhoods and local roads, concerns about eminent domain and property values, impacts on agriculture
10/12/2009	Alternatives Analysis Public Meeting, Gilroy	Alignment alternatives, impacts on neighborhoods and local roads, concerns about eminent domain and property values, impacts on agriculture
10/12/2009	City of San Jose	PAA—environmental review process and alternative alignments
10/14/2009	Caltrans	PAA—environmental review process and alternative alignments
10/28/2009	Diridon Station Working Group	PAA—environmental review process and alternative alignments
11/2/2009	Gilroy City Council (Study Session)	PAA—environmental review process and alternative alignments
11/12/2009	FRA	PAA—environmental review process and alternative alignments
11/12/2009	HP Pavilion (now SAP Center)	PAA—environmental review process and alternative alignments
11/13/2009	Gilroy Chamber of Commerce Government Relations Committee	PAA—environmental review process and alternative alignments
11/13/2009	VTA	PAA—environmental review process and alternative alignments

Date	Organization/Individual	Topic
11/17/2009	Grassland Water District	PAA—environmental review process and alternative alignments
11/18/2009	South San Jose residents	PAA—environmental review process and alternative alignments
11/18/2009	UPRR	PAA—environmental review process and alternative alignments
11/24/2009	Rotary Club of Gilroy	PAA—environmental review process and alternative alignments
12/1/2009	DWR	PAA—environmental review process and alternative alignments
12/7/2009	Diridon Good Neighbor Committee	PAA—environmental review process and alternative alignments
12/14/2009	TWG Meeting #2 (Merced)	Alternatives analysis process, current alignment alternatives, right-of-way requirements, impacts on biological and water resources, effects on residents
12/15/2009	City of Gilroy	PAA—environmental review process and alternative alignments
12/15/2009	City of San Jose Department of Transportation	PAA—environmental review process and alternative alignments
12/16/2009	TWG Meeting #2 (Gilroy)	Alternatives analysis process, current alignment alternatives, right-of-way requirements, impacts on biological and water resources, effects on residents
12/17/2009	Open House Meeting, Merced	Ongoing alternatives analysis results
12/18/2009	UPRR	PAA—environmental review process and alternative alignments
1/4/2010	California Department of Conservation	PAA—environmental review process and alternative alignments
1/5/2010	City of San Jose	PAA—environmental review process and alternative alignments
1/5/2010	City of San Jose Department of Transportation and Redevelopment Agency	PAA—environmental review process and alternative alignments
1/5/2010	NMFS	PAA—environmental review process and alternative alignments
1/8/2010	City of San Jose	PAA—environmental review process and alternative alignments
1/11/2010	Open House Meeting, Gilroy	Ongoing alternatives analysis results
1/12/2010	Open House Meeting, San Jose	Ongoing alternatives analysis results
1/12/2010	VTA	PAA—environmental review process and alternative alignments
1/14/2010	Peninsula Rail Program	PAA—environmental review process and alternative alignments

Date	Organization/Individual	Topic
1/20/2010	SCVWD	PAA—environmental review process and alternative alignments
1/20/2010	Soap Lake Floodplain Representatives	PAA—environmental review process and alternative alignments
1/30/2010	Shasta-Hanchett Park Neighborhood Association Annual Meeting	PAA—environmental review process and alternative alignments
2/1/2010	Diridon Good Neighbor Committee	PAA—environmental review process and alternative alignments
2/1/2010	Gilroy City Council (Study Session)	PAA—environmental review process and alternative alignments
2/1/2010	Santa Clara County District 1 Supervisor Don Gage	PAA—environmental review process and alternative alignments
2/8/2010	San Jose District 2 Constituents	PAA—environmental review process and alternative alignments
2/9/2010	UPRR	PAA—environmental review process and alternative alignments
2/10/2010	USEPA/USACE	PAA—environmental review process and alternative alignments
2/12/2010	Gilroy Chamber of Commerce Government Relations Committee	PAA—environmental review process and alternative alignments
2/22/2010	Authority Chairman Pringle's Mayors Meeting	PAA—environmental review process and alternative alignments
3/2/2010	Alternatives Analysis Community Workshop, San Jose	Alignment alternatives in the south of Diridon Station to Tamien Station area
3/2/2010	City of San Jose	PAA—environmental review process and alternative alignments
3/3/2010	City of Gilroy	PAA—environmental review process and alternative alignments
3/10/2010	City of Morgan Hill	PAA—environmental review process and alternative alignments
3/17/2010	Diridon Good Neighbor Committee	PAA—environmental review process and alternative alignments
3/27/2010	Diridon Station Area Plan Community Workshop	PAA—environmental review process and alternative alignments
3/29/2010	DWR	PAA—environmental review process and alternative alignments
4/5/2010	TAMC Rail Policy Committee	PAA—environmental review process and alternative alignments
4/9/2010	Merced County	PAA—environmental review process and alternative alignments
4/14/2010	City of Gilroy	PAA—environmental review process and alternative alignments

Date	Organization/Individual	Topic
4/29/2010	SPUR City Trip to San Jose	PAA—environmental review process and alternative alignments
5/3/2010	Gilroy City Council Study Session	Program-level EIR/EIS and the alternatives analysis process
5/5/2010	Open House Meeting, Gardner Community Center, San Jose	South of Diridon Station to Coyote Creek Alternatives Analysis Informational Open House
5/6/2010	Open House Meeting, Santa Teresa Public Library, San Jose	South of Diridon Station to Coyote Creek Alternatives Analysis Informational Open House
5/18/2010	Cities of Los Banos and Dos Palos	PAA—environmental review process and alternative alignments
5/26/2010	Diridon Good Neighbor Committee	PAA—environmental review process and alternative alignments
6/10/2010	Santa Clara County Roads and Airports Department	SAA—presentation on the alternatives analysis
6/10/2010	Santa Clara County Supervisor Don Gage	SAA—Briefing on the alternatives analysis regarding Santa Clara County
6/10/2010	South County Joint Planning Advisory Committee	SAA—presentation on the alternatives analysis, particularly as it affects Morgan Hill, San Martin, and Gilroy
6/15/2010	Los Banos Community Open House	SAA—alignment alternatives and station location options
6/15/2010	Madera County Board of Supervisors	SAA—Avenue 21 and 24 alignment design options through Madera County
6/17/2010	Dos Palos Community Open House	SAA—alignment alternatives and station location options
6/17/2010	Los Banos Unified School District	SAA—impacts of the project on Volta Elementary School
6/17/2010	TWG meeting #3: Merced	SAA—alignment alternatives, station location and design options
6/21/2010	Caltrans	SAA meeting—alternative alignments and overall system summary
6/23/2010	Caltrain	SAA meeting—proposed alignments
6/28/2010	City of Gilroy Police and Fire Chiefs	SAA—safety measures related to train operations and stations
6/28/2010	Gilroy Community Open House	SAA—alignment alternatives and station location options
6/28/2010	TWG meeting #3: Gilroy	SAA meeting—alignment alternatives, station location, and design options
7/6/2010	Chowchilla Water District	SAA—district's irrigation distribution system
7/7/2010	CCID	SAA—district's irrigation distribution system
7/7/2010	Panoche Water and Drainage District	SAA—district's irrigation distribution system
7/9/2010	Gilroy Chamber of Commerce Government Relations Committee	SAA—update on project progress and next steps, with focus on the Morgan Hill and Gilroy area
7/13/2010	San Martin Neighborhood Alliance	SAA—project information in the Morgan Hill/San Martin/Gilroy area

Date	Organization/Individual	Topic
7/15/2010	Merced Community Open House	SAA—alignment alternatives and station location options
7/19/2010	Gilroy City Council Study Session	SAA—update to the Mayor and Council about studies conducted in the Gilroy area
7/20/2010	HP Pavilion (now SAP Center)	SAA—update on the status of the San Francisco to San Jose and San Jose to Merced Project Sections' EIR/EIS processes and their interface at Diridon Station
7/21/2010	San Jose Community Open House	SAA—alignment alternatives and station location options
7/22/2010	Merced County Farm Bureau Board of Directors	SAA—project status report and discussion of alternative alignments
7/29/2010	VTA Executive Briefing	SAA—presentation of the alternatives analysis, with a focus on Caltrain service, BART impacts, and Gilroy alignments
8/16/2010	Santa Clara County Roads and Airports and Planning Departments staff	SAA—project status report and discussion of alternative alignments
8/28/2010	Greenbelt Alliance	SAA—project status report and discussion of alternative alignments
8/30/2010	CDFG, NMFS, USFWS	SAA—project status report and discussion of alternative alignments
9/7/2010	Gilroy Chamber of Commerce and Business Association	SAA—Board member Rod Diridon, Sr., gave a presentation on Gilroy area alignment options
9/9/2010	South County Joint Planning Advisory Committee	SAA—South County HSR alternative alignments
9/14/2010	San Jose City Council	SAA—Dan Leavitt presented a statement regarding development of a Cooperative Agreement
9/15/2010	Preserve Our Heritage	Preliminary and Supplemental AA reports
9/17/2010	Diridon Station Joint Policy Advisory Board	Station Area Development principles
9/28/2010	City of Gilroy Administrator Tom Haglund	SAA—project status report and discussion of alternative alignments
10/5/2010	Caltrain	SAA—in-progress 15% plans and proposed relocation of Caltrain/UPRR tracks
10/7/2010	Gene Zanger, property owner	SAA—Property owner meeting in Casa de Fruta/Pacheco Pass area for project status report and discussion of alternative alignments
10/13/2010	VTA	SAA—VTA support in Gilroy station planning
10/14/2010	San Benito County staff/Airport Land Use Commission	SAA—project status report and habitat mitigation plans
10/18/2010	City of Gilroy staff	SAA—impacts on local roads and traffic
10/20/2010	City of Morgan Hill staff	SAA—Design
10/21/2010	Reclamation	SAA—Overview of the corridor focusing on areas that may affect Reclamation facilities

Date	Organization/Individual	Topic
10/27/2010	City of San Jose Department of Transportation	Project status update and preparation for November 4 community town hall meeting
11/3/2010	Morgan Hill City Council Study Session	SAA—project update regarding alignments being studied in Morgan Hill
11/4/2010	City of San Jose Community Town Hall on HSR	SAA—project update and responses to community questions, as well as information on the Cooperative Agreement between the City and Authority
11/17/2010	Santa Clara County Roads & Airports Department staff with City of Morgan Hill and Gilroy staff	SAA—road connections/realignments being proposed related to road closures
11/18/2010	California Society of Professional Engineers, Monterey Bay Branch	SAA—project status report and discussion of alternative alignments
11/18/2010	SCVWD	SAA—alignment alternatives and flood control facilities within Santa Clara County
11/29/2010	SCVWD, USACE	SAA—top of rail profile grade
12/10/2010	Caltrans Districts 4 and 10	SAA—project status report and discussion of alternative alignments
12/10/2010	Santa Clara County Parks Department	SAA—UPRR alignment alternative, US 101–Downtown Gilroy alignment alternative, countywide trails
12/15/2010	Morgan Hill and Gilroy joint HSR task force	SAA—Introduction of Roelof as HSR CEO, discussion of Morgan Hill and Gilroy concerns regarding alignments and station amenities (including parking)
12/16/2010	City of Gilroy staff	SAA—HSR passenger station concepts
12/20/2010	City of Gilroy staff	SAA—project status report and discussion of alternative alignments
12/20/2010	City of Morgan Hill staff	SAA—US 101 to East Gilroy alignment impacts
12/20/2010	Pacheco Pass Property Owners	SAA—alignments studied in the Pacheco Pass
12/22/2010	Caltrans District 4	SAA—I-280/SR 87 aerial structure
12/23/2010	Santa Clara County	SAA—cross-street grade separations through San Martin
12/28/2010	City of Gilroy staff	SAA—grade separations for at-grade HSR alignment option
1/3/2011	City of Morgan Hill staff	SAA—downtown Morgan Hill at-grade vertical profile option
1/4/2011	Caltrans District 10	SAA—encroachments and Caltrans expectations for future documentation
1/14/2011	City of Morgan Hill staff	SAA—road network and proposed modifications
1/14/2011	City of San Jose staff	SAA—plans for the aesthetics and design process
1/14/2011	Gilroy Chamber of Commerce Government Relations Committee	SAA—economic development opportunities and HSR in South Santa Clara County

Date	Organization/Individual	Topic
1/19/2011	Santa Clara County District 1 Supervisor Mike Wasserman, Santa Clara County Roads & Airports Department	SAA—project updates and south county residents' concerns
1/20/2011	Millpond Mobile Homes Community Briefing	SAA—project status report and discussion of alternative alignments
1/25/2011	Morgan Hill and Gilroy joint HSR task force	SAA—Morgan Hill and Gilroy concerns regarding proposed alignments and station amenities (including parking)
1/25/2011	South Santa Clara County Community Engagement Workshop #1, Gilroy	SAA—information on the evolution of the project in south Santa Clara County, including alignment development
1/27/2011	South Santa Clara County Community Engagement Workshop #1, Morgan Hill	SAA—information on evolution of the project in south Santa Clara County, including alignment development
2/17/2011	City of Gilroy staff	SAA—refined HSR passenger station
2/23/2011	City of Morgan Hill staff	SAA—latest downtown Morgan Hill at-grade vertical profile option
3/7/2011	San Jose Visual Design Guidelines CWG North meeting #1	Visual design guidelines being prepared by the Authority and City of San Jose
3/8/2011	Santa Clara County	SAA—latest downtown San Martin at-grade vertical profile option
3/10/2011	San Jose Visual Design Guidelines CWG South meeting #1	Visual design guidelines being prepared by the Authority and City of San Jose
3/14/2011	Campbell United Methodist Church Men's Club	SAA—updates on the statewide project and the San Francisco to San Jose and San Jose to Merced Project Sections
3/22/2011	City of Gilroy staff	SAA—Direction for downtown Gilroy at-grade vertical profile option
3/22/2011	Preserve Our Heritage	Alternative alignments
3/22/2011	South Santa Clara County Community Meeting (hosted by District 1 Supervisor Mike Wasserman)	SAA—information on the HSR project in south county, including the environmental review process, project status, and eminent domain/property acquisition process
3/29/2011	South Santa Clara County Community Engagement workshop #2, Gilroy	SAA—methodology for evaluating sound and visual impacts and approaches to mitigation
3/30/2011	South Santa Clara County Community Engagement workshop #2, Morgan Hill	SAA—methodology for evaluating sound and visual impacts and approaches to mitigation
4/11/2011	San Jose Visual Design Guidelines CWG North meeting #2	HSR visual design guideline process for San Jose
4/14/2011	San Jose Visual Design Guidelines CWG South meeting #2	Visual design guideline process for San Jose
4/22/2011	Morgan Hill and Gilroy mayors	Discussion with Roelof van Ark on Gilroy station area planning process
4/22/2011	Morgan Hill and Gilroy joint HSR task force	Follow-up on proposed alignments and station amenities (including parking)

Date	Organization/Individual	Topic
5/4/2011	Silicon Valley Economic Development Alliance	Project status report and discussion of alternative alignments
5/5/2011	McCarthy Business Park	Project status report and discussion of alternative alignments
5/6/2011	Congresswoman Zoe Lofgren's staff	Discussion of small and Hispanic business opportunities
5/14/2011	San Jose Visual Design Guidelines CWG North and South meeting #3	Visual design guideline process for San Jose
5/17/2011	Preserve Our Heritage	Concerns regarding alignments under evaluation
5/19/2011	Open House, Gilroy Senior Center	SAA, environmental review process, alternative alignments
5/23/2011	San Jose Visual Design Guidelines CWG North meeting #4	
5/25/2011	Open House, Merced Senior Center	SAA, environmental review process, alternative alignments
5/26/2011	San Jose Visual Design Guidelines CWG South meeting #4	Visual design guideline process for San Jose
5/27/2011	Preserve Our Heritage	SR 152 required Caltrans setbacks for HSR and Preserve Our Heritage's proposed alternative paralleling SR 152
6/13/2011	Open House, Los Banos Community Center	SAA, environmental review process, alternative alignments
6/16/2011	South Santa Clara County Community Engagement Workshop #3, Morgan Hill	Review station design and new at-grade alignments
6/23/2011	South Santa Clara County Community Engagement Workshop #3, Gilroy	Review station design and new at-grade alignments
6/24/2011	Preserve Our Heritage	AA—east-west alignment with SR 152 and Preserve Our Heritage's alternative proposed on 5/27/2011
6/25/2011	Silver Leaf Neighborhood Association "Spring Fling/Festival in the Park" community event (booth)	Project overview and alternative alignments
6/28/2011	San Jose Visual Design Guidelines CWG meeting #5	Visual design guideline process for San Jose
7/18/2011	San Jose Visual Design Guidelines CWG meeting #6	Visual design guideline process for San Jose
8/1/2011	TAMC Rail Policy Committee	Update on SAA Report
8/5/2011	Santa Clara County Fair (booth at weekend event 8/5/11-8/7/11)	Project overview and alternative alignments
9/24/2011	Taste of Morgan Hill (booth at two day event 9/24/11-9/25/11)	Project overview and alternative alignments
9/28/2011	City of Gilroy Mayor and staff	Tour in San Carlos
9/29/2011	South Santa Clara County Community Engagement Workshop # 4, Morgan Hill	Review station design and alignments

Date	Organization/Individual	Topic
10/11/2011	South Santa Clara County Community Engagement Workshop # 4, Gilroy	Review station design and alignments
11/7/2011	Gilroy Unified School District staff	Statewide HSR program, key documents and milestones, alignment maps, vertical and horizontal alignments under consideration
11/7/2011	Spanish-speaking group, San Jose	Project overview and alternative alignments
12/8/2011	San Jose Town Hall	Project updates, visual design guidelines, findings from evaluation of a modified tunnel option
1/9/2012	Joint San Jose to Merced/Merced to Fresno Stakeholder Meeting, Chowchilla	Preferred alignment approved by the HSR Board, potential impacts, project teams
1/17/2012	Gilroy South County Sunrise Rotary	Environmental review process and alternative alignments
1/26/2012	Salinas Valley Chamber of Commerce	Environmental review process and alternative alignments
3/27/2012	Policy aides for Supervisor Ken Yeager of Santa Clara County	Environmental review process and alternative alignments
4/23/2012	Morgan Hill and Gilroy City Managers Tom Haglund and Ed Tewes	Environmental review process and alternative alignments
4/25/2012	Kevin Maitski, Santa Clara County Supervisor Wasserman's office	Environmental review process and alternative alignments
4/26/2012	Quarterly TWG Meeting (webinar)	Environmental review process and alternative alignments
5/16/2012	Caltrans NAAC	HSR program update and tribal involvement overview
5/16/2012	San Jose Chamber of Commerce	Environmental review process and alternative alignments
5/18/2012	San Jose Chamber of Commerce	Environmental review process and alternative alignments
6/9/2012	Silver Leaf Neighborhood Association/Spring Fling Festival (booth)	Environmental review process and alternative alignments
6/11/2012	Meeting with Environmental Groups, San Jose	Environmental review process and alternative alignments
6/13/2012	Caltrans NAAC	HSR program update and tribal involvement overview
6/13/2012	NAHC	Overview and status of the HSR program and tribal involvement were presented to commissioners and public
6/15/2012	Diridon Station Joint Policy Advisory Board	Environmental review process and alternative alignments
6/28/2012	Kevin Maitski, Santa Clara County Supervisor Wasserman's office	Environmental review process and alternative alignments
6/28/2012	Local Agency Formation Commission of Santa Clara County	Environmental review process and alternative alignments

Date	Organization/Individual	Topic
6/29/2012	San Jose Chamber of Commerce	Environmental review process and alternative alignments
7/25/2012	Bay Area Council, Silicon Valley Leadership Group, and San Mateo County Economic Development Association	Environmental review process and alternative alignments
8/1/2012	Caltrans NAAC	HSR statewide project presentation at Quarterly NAAC meeting—HSR program update and tribal involvement overview
8/15/2012	Quarterly TWG meeting (webinar)	Project updates including environmental review process and Central Valley Wye
9/5/2012	Holsclaw Road meeting with historical society, local tribal members, and Holsclaw Road residents, Gilroy	Holsclaw Road options
9/20/2012	San Martin Stakeholder Meeting	Environmental review process and alternative alignments
11/16/2012	Diridon Station Joint Policy Advisory Board	Environmental review process and alternative alignments
12/6/2012	Morgan Hill Unified School District staff	Statewide HSR program, key documents and milestones, alignment maps, vertical and horizontal alignments under consideration
12/21/2012	Santa Clara County Supervisor Wasserman, policy aide Kevin Maitski, and Dawn Cameron	County roads
1/24/2013	Gilroy Mayor Don Gage and City Manager Tom Haglund	Environmental review process, alternative alignments, Gilroy station planning
2/4/2013	TAMC Rail Policy Committee	Status of Central Valley bids, coordination with TAMC, local community outreach
2/4/2013	TAMC staff meeting	Environmental review process, alternative alignments, Gilroy station planning, and TAMC rail projects. Status of Central Valley bids, coordination with TAMC, and local community outreach
2/7/2013	San Benito Council of Government	Environmental review process and alternative alignments
2/8/2013	Caltrain Electrification Team	Caltrain coordination

5/24/2017	Morgan Hill City Council meeting	Updates on statewide program, range of alternatives for Morgan Hill to Gilroy Subsection, Q&A
5/24/2017	NorCal FRA/Resource Agency Coordination	Update on technical deliverables
5/24/2017	SCVWD	Irrigation access workshop focused on SCVWD facilities, primarily conduits/pipelines extending from Pacheco Pass to San Jose and pipeline failures
5/25/2017	VTA/BART	Phase II coordination, including project updates and Newhall Yard area
5/31/2017	City of San Jose staff	Public outreach
5/31/2017	San Jose CWG	Range of alternatives, environmental review process, input from CWG members on topic areas where more information is needed and areas for improved communications
5/31/2017	SLDMWA, San Benito County Water District, CCID, Henry Miller Reclamation District	Irrigation access workshop: SLDMWA, CCID, and Henry Miller Reclamation District facilities along Henry Miller Road and SBCWD interface at Casa de Fruta
6/1/2017	Diridon Intermodal Working Group	Station access memoranda
6/7/2017	City of San Jose staff	Public outreach
6/13/2017	NorCal FRA Check-In	Status of project definition, agency coordination, 90-day look-ahead for San Francisco to San Jose and San Jose to Merced project sections, coordination on process for sharing preliminary 4(f) results for San Jose to Merced Project Section
6/14/2017	City of San Jose staff	Public outreach
6/14/2017	City of San Jose Staff Working Group	Communication protocols, Monterey Corridor cost estimate and alternatives, Diridon At-Grade—East Expansion Exhibit, PEPD, and Hedding St. bridge
6/14/2017	Central Valley Mitigation Stakeholders including USFWS, Defenders of Wildlife, Audubon Society, The Nature Conservancy, Ducks Unlimited, Grasslands Water District, California Waterfowl, USDA, and Environmental Defense Fund	Regional conservation efforts and mitigation priorities
6/15/2017	NMFS	Fish and Aquatic Resources Working Group meeting #2: Meeting schedule, Steelhead and Chinook Salmon Habitat Suitability memo, steelhead species model
6/15/2017	SAP Center	Project update, Diridon Station development opportunities, impacts on SAP Center parking
6/20/2017	FRA and USDOT	Tour of alignment and discussion of HSR history and outreach

Date	Organization/Individual	Topic
6/21/2017	Central Valley Mitigation Stakeholders including USFWS, Defenders of Wildlife, Audubon Society, The Nature Conservancy, Ducks Unlimited, Grasslands Water District, California Waterfowl, USDA, Point Blue, and Environmental Defense Fund	Avian protection measures
6/21/2017	City of San Jose staff	Public outreach
6/21/2017	Megaregional Rail Leadership Workshop hosted by Capitol Corridor JPA	Project update, milestones and next steps
6/22/2017	VTA and City of San Jose	VTA needs for running bus service and roadway options along Monterey Road, City of San Jose shared the 100-ft boulevard concept
6/22/2017	VTA/BART	Phase II coordination, including project updates on proposed staging and alternative concepts, and VTA on Newhall Yard area
6/24/2017	Morgan Hill City Council Meeting	Alignment alternatives, community impacts, ROW compensation
6/27/2017	NorCal FRA Check-In	Status of project definition, agency coordination, and 90-day look-ahead for San Francisco to San Jose and San Jose to Merced project sections, review agenda and presentation for next monthly resource agency coordination meeting
6/27/2017	SPUR: How Should High-Speed Rail Travel Through San Jose	Alignments through San Jose and Diridon station
6/28/2017	City of San Jose Staff Working Group	City's request for 100-ft Monterey Road cross section, anticipated ROW requirements for at-grade and aerial alternatives, status of HSR traffic analysis, City comments on the PEPD of City facilities
6/28/2017	NorCal FRA/Resource Agency Coordination	Update on technical deliverables, wildlife crossing overview
6/30/2017	Pacific Gas & Electric	Traction power
6/30/2017	San Jose Councilmember Jimenez	Tunnel and aerial alignments and underground stations
7/7/2017	City of San Jose staff	Public outreach
7/10/2017	City of Gilroy	Conceptual alignments adjacent to US 101
7/11/2017	Morgan Hill Unified School District—teleconference/webinar	Alignment options and impacts on Morgan Hill schools: Enical School, Ann Sobrato High, Barrett Elementary School, and San Martin/Gwinn Elementary School
7/12/2017	City of San Jose staff	Public outreach
7/12/2017	San Jose CWG	Project Section updates, environmental process and evaluation criteria, range of alternatives for Monterey Corridor subsection

Date	Organization/Individual	Topic
7/15/2017	CDFW Region 3, CDFW Region 4, CDFW HCP Branch, USFWS	Species Working Group meeting #7: Project footprint and wildlife corridor analysis
7/19/2017	City of San Jose staff	Public outreach
7/19/2017	Gilroy Community & Neighborhood Revitalization Committee	Updates on Statewide Program, environmental process and evaluation criteria, range of alternatives for Monterey Corridor subsection, future meeting dates and topics, Q&A
7/20/2017	San Martin Neighborhood Alliance	Updates on Project Section, range of alternatives for Morgan Hill to Gilroy subsection, responses to questions submitted to Authority prior to meeting
7/25/2017	NorCal FRA Check-In	Status of project definition, agency coordination, 90-day lookahead for San Francisco to San Jose and San Jose to Merced Project Sections, San Jose to Merced Checkpoint B Addendum process, environmental review process, alternatives refinement, and station planning
7/26/2017	City of San Jose staff	Public outreach
7/27/2017	Caltrans District 4	Traffic impacts along Monterey Road, design exceptions at I-280/SR 87
7/28/2017	SPUR: Urban Innovation Council—Silicon Valley	San Jose State University's expanding campus
8/1/2017	Senator Jim Beall	Central Valley construction tour
8/2/2017	City of Gilroy staff	US 101 alignments
8/2/2017	City of Morgan Hill staff	Reviewed Project Schedule and Draft PEPD plans
8/2/2017	City of San Jose staff	Public outreach
8/2/2017	San Jose CWG	Project Section updates, range of alternatives for the San Jose downtown/Diridon subsection, and review of Hwy 101 alignment elimination
8/2/2017	SPUR Study Tour	Diridon station tour, project integration
8/7/2017	NMFS	Fish and Aquatic Resources Working Group meeting #3: Effects matrix for steelhead, sprint-run Chinook salmon, fall-run Chinook salmon, essential fish habitat
8/8/2017	NorCal FRA Check-In	San Jose to Merced Checkpoint B Addendum comment backcheck, environmental review process, alternatives refinement, station planning
8/9/2017	CCID and Henry Miller Reclamation District	Irrigation access workshop with an overview of design updates in consideration of maintenance access for Henry Miller Reclamation District and CCID facilities
8/9/2017	City of San Jose staff	Public outreach
8/9/2017	City of San Jose Staff Working Group	City generated at-grade alignment concept
8/10/2017	Caltrans District 10	I-5 weigh station and Caltrans initiation of the Draft PEPD
8/16/2017	CDFW Region 3, CDFW Region 4, CDFW HCP Branch, USFWS	Species Working Group meeting #8: Short project description, BA outline, wildlife corridor analysis

Date	Organization/Individual	Topic
8/16/2017	City of San Jose staff	Public outreach
8/22/2017	NorCal FRA Check-In	Status of project definition, agency coordination, and 90-day lookahead for FJ and JM project sections, JM Checkpoint B Addendum Workshop logistics, Environmental review process, alternatives refinement, and station planning
8/23/2017	City of San Jose staff	Public outreach
8/23/2017	NorCal FRA/Resource Agency coordination: CDFW, SGC, STB, USACE, Reclamation, and USEPA	Update on technical report deliverables, NEPA assignment status
8/29/2017	NMFS	Fish and Aquatic Resources Working Group meeting #4: Short project description, BA outline, preliminary compensatory mitigation plan outline, effects matrix for steelhead
8/29/2017	Santa Clara County Board of Supervisors	Approach to Diridon Station, project updates, schedule
8/30/2017	City of Gilroy staff	Alignment alternatives, including US 101
8/30/2017	City of San Jose staff	Public outreach
8/30/2017	Grasslands Water District	Project Section updates, discussion of Draft PEPD in relation to district facilities
8/30/2017	San Jose CWG	Permission-to-enter and ROB processes, construction mitigation, noise impacts, next steps
9/6/2017	City of San Jose staff	Public outreach
9/6/2017	City of San Jose Staff Working Group	Details of City-generated at-grade alignment concept
9/7/2017	Caltrans District 4	Draft PEPD and tunnel construction assumptions
9/8/2017	Caltrain/VTA coordination meeting	Newhall Yard, review of VTA-owned stations, environmental review process, alternatives refinement, station planning
9/9/2017	United Neighborhoods of Santa Clara County Neighborhood Development Conference	San Jose to Merced Project Section and statewide updates
9/11/2017	Senter Monterey Neighborhood Association	Noise, commute, houses, and other impacts along Monterey Road
9/11/2017	Silicon Valley Chamber Coalition	Small business program update
9/12/2017	NorCal FRA Check-In	Status of project definition, agency coordination, 90-day lookahead for San Francisco to San Jose and San Jose to Merced, San Jose to Merced wildlife corridor crossing study
9/14/2017	Caltrans District 10	Section report, project coordination
9/18/2017	Gardner Neighborhood Association	Statewide program overview, Project Section update, review of San Jose Diridon approach alternatives, review of community input, Q&A
9/20/2017	City of San Jose staff	Public outreach

Date	Organization/Individual	Topic
9/20/2017	City of San Jose Staff Working Group	City-generated at-grade alignment concept
9/25/2017	Caltrain, VTA, City of San Jose	Downtown Intermodal Rail Station engineering, design, outreach, legislation
9/26/2017	NorCal FRA Check-In	Project update, outreach update
9/27/2017	City of San Jose staff	Public outreach
9/27/2017	NorCal FRA/Resource Agency Coordination	Agency participation, Project Section status, results of wildlife crossing studies
9/27/2017	San Jose CWG	Overview of and mitigation measures for noise impacts and path of sounds, potential discussion topics for remaining 2017 CWG meetings
9/28/2017	Grasslands Water District	Geographical Information Systems/mapping data
9/28/2017	Station Cities meeting: SPUR, Integral Group	Station area grant review and project update
10/4/2017	City of San Jose staff	Public outreach
10/4/2017	City of San Jose Staff Working Group	City-generated at-grade alignment concept
10/4/2017	SLDMWA	Site tour to review project interface with district facilities
10/10/2017	NorCal FRA Check-In	Project update, outreach update
10/11/2017	City of San Jose staff	Public outreach
10/12/2017	Morgan Hill Unified School District	Project Section update
10/18/2017	City of San Jose staff	Public outreach
10/19/2017	Caltrans District 10	I-5 weigh station
10/24/2017	NorCal FRA Check-In	Project update, outreach update
10/26/2017	Caltrans District 4	?
10/26/2017	City of San Jose staff	Public outreach
10/26/2017	San Jose CWG	Flyover and visual simulations of HSR through San Jose, future meeting schedule and topics
11/1/2017	City of San Jose	Meeting with City of San Jose staff to discuss public outreach
11/1/2017	City of San Jose Staff Working Group	Responses to HSR comments regarding City-generated at-grade alignment concept
11/7/2017	NorCal FRA Check-In	Environmental Review process, alternatives refinement, station planning
11/9/2017	Caltrans District 10	Project update, impacts on I-5 weigh station and temporary access to SR 152
11/15/2017	Morgan Hill City Council Workshop	Project update, outreach update, impacts on Morgan Hill
12/5/2017	NorCal FRA Check-In	Environmental Review process, alternatives refinement, station planning
12/6/2017	City of San Jose staff	Public outreach

Date	Organization/Individual	Topic
12/6/2017	Gilroy City Council Meeting	Project update, outreach update, impacts to City of Gilroy
12/13/2017	City of San Jose	Meeting with City of San Jose staff to discuss public outreach
12/13/2017	Grasslands Water District	Geographical Information Systems/mapping data
12/14/2017	Caltrans District 10	Project update, impacts on I-5 weigh station and temporary access to SR 152
12/19/2017	NorCal FRA Check-In	Environmental Review process, alternatives refinement, station planning
1/4/2018	SCVWD	Responses to SCVWD comments for Draft Floodplain Technical Analysis and Modeling, Llagas Creek, revisions to available hydrologic and hydraulic data, coordination with floodplain managers
1/9/2018	NorCal FRA Check-In	San Francisco to San Jose and San Jose to Merced project definition, agency coordination, workflow discussion including EIR/EIS progress, engineering, and outreach updates
1/10/2018	TNC, SCVOSA, SCVHA, Pathways for Wildlife, Peninsula Open Space Trust, and California Strategic Growth Council	Northern Wildlife Movement Continuing Preliminary Design Workshop focused on wildlife movement in the Soap Lake area
1/11/2018	Willow Glen Neighborhood Association	Project section update, range of alternatives in Willow Glen community
1/17/2018	CHP and Caltrans	Santa Nella platform scale
1/24/2018	Los Banos Landowners Meeting: Merced County Farm Bureau, San Luis Canal Company, and CCID	Project update, responding to questions regarding ROW
1/31/2018	City of Morgan Hill staff	City's proposed alignment east of US 101, administrative and contracting topics
2/13/2018	NorCal FRA Check-In	San Francisco to San Jose and San Jose to Merced project definition, agency coordination, workflow discussion including EIR/EIS progress, engineering, and outreach updates
2/13/2018	TNC, SCVOSA, SCVHA, Pathways for Wildlife, Peninsula Open Space Trust, and California Strategic Growth Council	Coyote Valley wildlife crossing webinar
2/14/2018	TNC, SCVOSA, SCVHA, Pathways for Wildlife, Peninsula Open Space Trust, and California Strategic Growth Council	Northern Wildlife Movement Continuing Preliminary Design Workshop focused on wildlife movement in the Soap Lake area
2/21/2018	Grassland Water District	Engineering review
2/22/2018	LPMG	Executive leadership appointments, 2018 Business Plan schedule, state legislative audit, NEPA assignment, San Francisco to San Jose Project Section update, project management funding agreement with Caltrain, environmental review process, alternatives refinement, station planning

Date	Organization/Individual	Topic
2/23/2018	Community Floodplain Administrators Meeting with SCVWD, City of Morgan Hill, Santa Clara County Planning Department, City of Gilroy, City of San Jose	Proposed structures and typical sections; floodplain study sources; overview of floodplain crossings
2/28/2018	NorCal FRA Check-In	San Jose to Merced Checkpoint B Addendum, NEPA assignment update, update on wildlife crossing studies, San Jose to Merced geotechnical investigations
2/28/2018	TNC, SCVOSA, SCVHA, Pathways for Wildlife, Peninsula Open Space Trust, and California Strategic Growth Council	Workshop on the initial draft of mitigation measures for wildlife crossings and impacts on habitats and species
3/13/2018	NorCal FRA Check-In	San Francisco to San Jose and San Jose to Merced project definition, agency coordination, workflow discussion including EIR/EIS progress, engineering, and outreach updates
3/14/2018	TNC, SCVOSA, SCVHA, Pathways for Wildlife, Peninsula Open Space Trust, and California Strategic Growth Council	Workshop on the initial draft of mitigation measures for wildlife crossings and impacts on habitats and species
3/15/2018	Romero Ranch Landowners and California Strategic Growth Council	Input on wildlife movement, sensitive habitat, and conserved lands management; ranch input on operations and uses; HSR update on proposed alignment, preliminary design and environmental processes, permission to enter for field reconnaissance
3/23/2018	Grassland Water District	Refined preliminary cost estimates for tunnel guideway beneath Mud Slough, assessment of wildlife impacts, status of property inventory for potential agricultural easement purchases
4/10/2018	NorCal FRA Check-In	San Francisco to San Jose and San Jose to Merced project definition, agency coordination, workflow discussion including EIR/EIS progress, engineering, and outreach updates
4/18/2018	City/County Staff Coordinating Group	Caltrain and HSR business plans
4/18/2018	Morgan Hill City Council	2018 Business Plan
4/19/2018	SPUR	2018 Business Plan
4/24/2018	NorCal FRA Check-In	San Francisco to San Jose and San Jose to Merced project definition, agency coordination, workflow discussion including EIR/EIS progress, engineering, and outreach updates
4/26/2018	City of Gilroy staff	Revised preliminary engineering for HSR within the city, request review and comments to HSR
4/26/2018	LPMG	HSR Draft Business Plan/Caltrain Business Plan, Caltrain Electrification Project, Caltrain Positive Train Control Project, Public Comment
4/26/2018	NFIP Floodplain Administrators and Managers	Latest preliminary design at floodplain and floodway encroachments, preliminary hydraulic model results, next steps for reviews and feedback

Date	Organization/Individual	Topic
4/27/2018	TNC, SCVOSA, SCVHA, Pathways for Wildlife, Peninsula Open Space Trust, and California Strategic Growth Council	Latest preliminary design of HSR wildlife crossing features and request review and comments to HSR
5/1/2018	Northern California CWGs and TWGs	2018 Business Plan
5/2/2018	Caltrans District 2	Latest preliminary design of HSR wildlife crossing features, opportunities for collaboration on wildlife crossing improvements and other complementary mitigation efforts
5/2/2018	San Jose CWG	City-generated option, Caltrain Business Plan, 2018 Business Plan
5/3/2018	San Jose City Councilmember Raul Peralez	Outreach planning for Councilmember Peralez's district, including the Gardner neighborhood
5/8/2018	NorCal FRA Check-In	San Francisco to San Jose and San Jose to Merced project definition, agency coordination, workflow discussion including EIR/EIS progress, engineering, and outreach updates
5/18/2018	Grasslands Ecological Area stakeholders: USFWS, Audubon Society, DWR, Ducks Unlimited, Point Blue, Grassland Water District	Update on 2018 Business Plan, preliminary engineering, wildlife movement and crossings
5/22/2018	Mineta Transportation Institute Seminar: High-Speed Technologies on Railway Systems	2018 Business Plan
5/22/2018	San Jose City Council	2018 Business Plan
5/22/2018	SCVHA	Kick off SCVHA's SR 152 Pacheco Pass Wildlife Permeability and Hazards Study
5/29/2018	Grasslands Ecological Area stakeholders: USFWS, Audubon Society, DWR, Ducks Unlimited, Point Blue, Grassland Water District	Preliminary engineering and wildlife crossing features, issues of concern, recommended topics for analysis, data sharing
6/4/2018	San Jose City Councilmember Peralez's staff	San Jose District 3 public outreach
6/5/2018	Caltrain	Communications and outreach coordination, design review with Caltrain and local elected officials
6/6/2018	SCVHA	Preliminary engineering and wildlife crossing features, issues of concern, recommended topics for analysis, data sharing, approaches and opportunities for collaborating on HSR mitigation and complementary conservation activities
6/8/2018	Gilroy Mayor Roland Valasco, Gilroy City Administrator Gabriel Gonzalez, Gilroy Chamber of Commerce	2018 Business Plan, Overview of ROW process
6/10/2018	Picnic with San Jose City Councilmember Raul Peralez	Information Table

Date	Organization/Individual	Topic
6/12/2018	NorCal FRA Check-In	San Francisco to San Jose and San Jose to Merced project definition, agency coordination, workflow discussion including EIR/EIS progress, engineering, and outreach updates
6/13/2018	TNC, SCVOSA, SCVHA, Pathways for Wildlife, Peninsula Open Space Trust, and California Strategic Growth Council	Results of preliminary design refinements for wildlife crossing features, crossing configuration issues, update on 2018 Business Plan implementation
6/14/2018	Los Paseos Neighborhood Association	City-generated Option, 2018 Business Plan
6/15/2018	City of Morgan Hill	2018 Business Plan
6/20/2018	City/County Staff Coordinating Group	Caltrain electrification, milestones and technical analysis, 2018 Business Plan, Connecting Communities Strategy
6/26/2018	City of Morgan Hill staff	UPRR alternative review and updated
6/26/2018	FRA Northern California check-in	Environmental review process, alternatives refinement, station planning
6/26/2018	Gilroy Chamber of Commerce	Planning for an ROW workshop
6/26/2018	Gilroy Unified School District	Blended service between San Jose and Gilroy, impacts on schools
6/27/2018	Grasslands Ecological Area stakeholders: USFWS, Audubon Society, DWR, Ducks Unlimited, Point Blue, Grassland Water District	Lands for agricultural or open space conservation easements, approaches to evaluate potential noise or vibration impacts on waterfowl, wildlife corridor analysis, methods for evaluating bird movement
6/27/2018	NorCal FRA/Resource Agency Coordination	Agency participation, Project Section status, Business Plan 2018 implementation
6/28/2018	LPMG	Caltrain Business Plan, Electrification Project, HSR updates, public comments, LPMG member comments/requests including a grade separation toolkit
6/28/2018	Morgan Hill Chamber of Commerce	Planning for Morgan Hill Caltrain station, planning an ROW workshop
7/2/2018	Oak Grove Neighborhood Association	City-generated option, 2018 Business Plan
7/5/2018	Caltrain	Communications and outreach coordination, PEPD review, restarting CWG, Caltrain Business Plan
7/10/2018	SCVHA	2018 Business Plan; mitigation measures and collaborative implementation, preliminary results of Pacheco Pass wildlife movement analysis
7/12/2018	City of Morgan Hill	Morgan Hill and UPRR right-of-way coordination
7/17/2018	Caltrans District 10	Preliminary design for HSR features near I-5 and state highways in San Joaquin Valley
7/18/2018	City/County Staff Coordinating Group	Environmental review process, PEPD, alternatives refinement, station planning, Caltrain updates on Business Plan and electrification
7/18/2018	SAP Center	Implications for SAP Center resulting from changes to Diridon, including parking plan/analysis

Date	Organization/Individual	Topic
7/18/2018	SCVWD	Preliminary design of UP alternative, 2018 Business Plan
7/18/2018	TNC, SCVOSA, SCVHA, Pathways for Wildlife, Peninsula Open Space Trust, and California Strategic Growth Council	Results of preliminary design refinements for HSR wildlife crossing features, reconfiguration of the Gilroy maintenance-of-way facility, preliminary design of 2018 Business Plan study alternative
7/19/2018	Santa Clara County	Preliminary design refinements, reconfiguration of the Gilroy maintenance-of-way facility, initial preliminary design of the 2018 Business Plan study alternative
7/20/2018	Caltrans District 4	Impacts on I-5 crossing and weigh station
7/20/2018	City of Gilroy	UPRR alignment
7/20/2018	Morgan Hill Chamber of Commerce	Planning for upcoming Morgan Hill Day events
7/24/2018	Caltrain and VTA	Caltrain Business Plan, DISC, initial preliminary design of 2018 Business Plan study alternative
7/24/2018	NorCal FRA Check-In	Environmental review process, alternatives refinement, station planning
7/24/2018	North Willow Glen Neighborhood leaders	Neighborhood visit with neighborhood leaders
7/26/2018	LPMG	Environmental milestones and review process, alternatives refinement, station planning, upcoming activities and outreach, Caltrain electrification, 2018 Business Plan
7/27/2018	Gardner Neighborhood leaders	Neighborhood visit with neighborhood leaders
8/1/2018	Caltrain and VTA	Communication and outreach coordination, City/County Staff Coordinating Group and LPMG coordination, Caltrain Business Plan Outreach and Activities, PEPD city review, restarting CWG
8/1/2018	San Jose City Councilmembers Davis and Peralez's staff	Planning meeting for August 8, 2018 meeting with Councilmembers
8/2/2018	City of San Jose	City-generated option, planning for upcoming CWG
8/8/2018	Diridon	Review each agency's outreach plans
8/8/2018	San Jose City Councilmembers Davis and Peralez	Outreach to neighborhoods in Councilmembers' districts
8/9/2018	City of San Jose	Review San Jose CWG Meeting presentation
8/10/2018	San Jose Mayor Liccardo	Interface of HSR and DISC planning
8/14/2018	Morgan Hill Day	2018 Business Plan, Range of Alternatives
8/14/2018	NorCal FRA check-in	Environmental review process, alternatives refinement, station planning
8/15/2018	City of Morgan Hill	Design review of Alternatives 1–3 refinement
8/15/2018	City/County Staff Coordinating Group	2018 Sustainability Report, PEPD update, San Jose to Merced Project Section update

Date	Organization/Individual	Topic
8/15/2018	Grasslands Ecological Area stakeholders: USFWS, Audubon Society, DWR, Ducks Unlimited, Point Blue, Grassland Water District	Program and project specific mitigation related to crossing Grasslands Ecological Area
8/16/2018	San Jose CWG	CWG Reaffirmation Process, San Jose to Merced Project Section Update, update on Caltrain Business Plan, integration and collaboration of projects and processes, update on HSR alternatives
8/21/2018	Mineta Transportation Institute	Future of Diridon, DISC, and the Caltrain Business Plan
8/22/2018	TNC, SCVOSA, SCVHA, Pathways for Wildlife, Peninsula Open Space Trust, and California Strategic Growth Council	Accommodation of wildlife movement in Santa Clara Valley
8/23/2018	Caltrain	Communications and outreach coordination
8/23/2018	LPMG	Updates on 2018 Sustainability Report, PEPD process, San Jose to Merced Project Section, and outreach; environmental review process, alternatives refinement, station planning
8/23/2018	SCVWD	Design review meeting
8/24/2018	City of Gilroy	Review of at-grade blended alternative
8/28/2018	NorCal FRA check-in	Environmental review process, alternatives refinement, station planning
8/29/2018	San Jose City Councilmembers Davis and Peralez's staff	San Jose CWG Membership and Reaffirmation process
9/5/2018	Caltrain	Communications and outreach coordination, PEPD city review, restarting CWG, July City/County Staff Coordinating Group topics, Caltrain's Business Plan
9/7/2018	San Jose City Councilmember Sergio Jimenez	At-grade blended alternative
9/11/2018	Mineta Transportation Institute National HSR Leadership Summit	Information table covering statewide program and Project Section updates
9/12/2018	Global Climate Action Summit	Statewide program and Project Section updates
9/12/2018	Mineta Transportation Institute National HSR Leadership Summit	Information table covering statewide program and Project Section updates
9/13/2018	Global Climate Action Summit	Statewide program and Project Section updates
9/13/2018	Mineta Transportation Institute National HSR Leadership Summit	Information table covering statewide program and Project Section updates
9/19/2018	City/County Staff Coordinating Group	Connecting Communities Strategy, project section update, October CWG meetings, outreach update
9/19/2018	Grasslands Ecological Area stakeholders: USFWS, Audubon Society, Ducks Unlimited, Grasslands Water District, Point Blue, and Environmental Defense Fund	Program and project specific mitigation related to crossing Grasslands Ecological Area

Date	Organization/Individual	Topic
9/21/2018	City of Morgan Hill	Connecting Communities Strategy, review California climate investment opportunities to identify local projects supportive of HSR ridership
9/24/2018	Assemblymember Low State of the District	Project update, 2018 Business Plan, Range of Alternatives
9/24/2018	Gilroy City Council and Gilroy Unified School District	Project update, blended at-grade alternative, 2018 Business Plan
9/27/2018	Caltrain	Communications and outreach coordination
10/3/2018	Morgan Hill Realtors	Project update, blended at-grade alternative, ROW process
10/11/2018	Los Paseos Neighborhood	Neighborhood visit, concerns regarding range of alternatives
10/11/2018	SPUR Station Symposium	Lunch panel on the role of train stations in a changing mobility ecosystem
10/17/2018	Grasslands Ecological Area stakeholders: USFWS, Audubon Society, Ducks Unlimited, Grasslands Water District, Point Blue, and Environmental Defense Fund	Information sharing on stakeholder efforts to inform HSR preliminary design, environmental impact analyses, and potential mitigation actions associated with the Grasslands Ecological Area
10/18/2018	San Martin Neighborhood Alliance	Range of alternatives, Alternative 4 detail, project update
10/23/2018	Delmas Park Neighborhood Association	Update on 2018 Business Plan and alternatives under consideration in San Jose
10/23/2018	NorCal FRA Check-In	Environmental review process, alternatives refinement, station planning
10/25/2018	Caltrain	Outreach coordination meeting
11/7/2018	Gilroy–Los Banos TWG	Project update, alignment alternatives, community engagement and outreach, CWG activity on community resources
11/7/2018	Morgan Hill–Gilroy CWG	Program Updates, San Jose to Merced Project Section, community engagement and outreach, CWG input on community resources
11/28/2018	FRA	Comments on San Francisco to San Jose Draft PEPD
11/28/2018	San Jose CWG	Statewide project update; review of alignment alternatives; outreach and engagement; introduction to CWG activity on community resources, community outreach, project interfaces and integration

5/7/2020	Streetblog - Talking Headways Recording	Recorded interview to discuss project overview, status, benefits and the Draft EIR/EIS
5/11/2020	Open House Webinar #1	Webinar providing an opportunity for public to ask questions of technical staff regarding general topics, Draft EIR/EIS and project alternatives
5/11/2020	Draft EIR/EIS Office Hours	One-on-one call with public to discuss Draft EIR/EIS
5/13/2020	City of Morgan Hill Draft EIR/EIS Workshop #2	San Jose to Merced Project Section Draft EIR/EIS Q&A workshop with City staff
5/14/2020	Open House Webinar #2	Webinar providing an opportunity for public to ask questions of technical staff regarding general topics, Draft EIR/EIS and project alternatives
5/15/2020	HNTB Mega Project Planning Brown Bag	Discussion on Mega Project planning in times of uncertainty (COVID-19)
5/15/2020	Santa Clara Valley and Pacheco Pass Wildlife Stakeholders: San Benito Land Trust, Santa Clara Valley Open Space Authority, The Nature Conservancy, Santa Clara County, Santa Clara Valley Habitat Agency	San Jose to Merced Project Section Draft EIR/EIS Q&A workshop
5/18/2020	Open House Webinar #3	Webinar providing an opportunity for public to ask questions of technical staff regarding general topics, Draft EIR/EIS and project alternatives
5/20/2020	City/County Staff Coordinating Group	Presentation on Draft 2020 Business Plan, Draft EIR/EIS, construction update
5/20/2020	Draft EIR/EIS Office Hours	One-on-one call with public to discuss Draft EIR/EIS
5/21/2020	CWG Webinar	Webinar providing an opportunity for CWG members to ask questions of technical staff regarding general topics, Draft EIR/EIS and project alternatives

Date	Organization/Individual	Topic
5/26/2020	City of San Jose Draft EIR/EIS Workshop #2	San Jose to Merced Project Section Draft EIR/EIS Q&A workshop with City staff
5/27/2020	NorCal FRA/Resource Agency Coordination	Update on technical deliverables and schedule, a public outreach update for the San Jose to Merced Project Section Draft EIR/EIS
5/27/2020	Draft EIR/EIS Public Hearing	Webinar providing an opportunity for verbal public comment
5/27/2020	Draft EIR/EIS Office Hours	One-on-one call with public to discuss Draft EIR/EIS
5/28/2020	LPMG	Northern California Project Section updates, outreach update, Draft EIR/EIS
6/4/2020	City of Gilroy Draft EIR/EIS Workshop #2	Draft EIR/EIS Q&A workshop with City staff
6/10/2020	Mobility Partnership	Update on San Jose to Merced Project Section environmental clearance and Draft EIR/EIS outreach
6/17/2020	City/County Staff Coordinating Group	Update on 2020 Business Plan, San Jose to Merced Project Section Draft EIR/EIS, San Francisco to San Jose Project Section Draft EIR/EIS
6/17/2020	SAAG Meeting	Planning update on Diridon Station Area Plan and Google Mixed-Use Plan, updated Civic Engagement Plan, overview of results from Spring 2020 online outreach and survey
6/17/2020	Santa Clara County Refugee and Immigrant Forum	2-minute announcement regarding the end of the San Jose to Merced Project Section Draft EIR/EIS public comment period and announcement on upcoming San Francisco to San Jose Project Section project milestones
6/23/2020	DISC Outreach Sub-Committee	Diridon Station Concept Plan outreach check-in
6/24/2020	NorCal FRA/Resource Agency Coordination	Update on technical deliverables and schedule, summary of agency comments and Authority consideration for the San Francisco to San Jose Project Section Draft EIR/EIS
6/25/2020	LPMG	Northern California Project Section updates: outreach, Draft EIR/EIS, Final Business Plan (December 2020)
7/1/2020	Northern California Legislative Briefing	Statewide program update (2020 Business Plan, COVID-19 impacts, legislative hearings, construction update, track and systems procurement) and NorCal update (downtown rail extension MOU, environmental document preparation process, environmental milestones, San Jose to Merced Project Section Draft EIR/EIS outreach summary, San Francisco to San Jose Project Section lookahead)
7/15/2020	City/County Staff Coordinating Group	Update on 2020 Business Plan, San Francisco to San Jose Project Section Draft EIR/EIS
7/16/2020	Young Professionals in Infrastructure: Future of Rail Event	Discussion of 2020 Business Plan, Northern California environmental work and project development stages, 4,000 workers milestone

Date	Organization/Individual	Topic
7/20/2020	Morgan Hill Unified School District	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/22/2020	NorCal FRA/Resource Agency Coordination	Update on technical deliverables, Draft EIR/EIS and schedule
7/22/2020	City of Morgan Hill	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/23/2020	LPMG	Northern California Project Section updates: San Francisco to San Jose Project Section Draft EIR/EIS navigation, Final Business Plan (December 2020), Meet/Map HSR NorCal walkthrough
7/23/2020	Santa Clara County Parks & Recreation Department	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/24/2020	Rebekah Children's Services	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/27/2020	San Jose Councilmember Dev Davis	Provided an update on the HSR program
7/27/2020	African American Community Service Agency	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/27/2020	Gavilan College	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/27/2020	San Jose Downtown Residents Association	Project overview and update
7/28/2020	Bay Area Council Transportation Committee HSR Event	Northern California Project Section updates: Draft EIR/EIS, Final Business Plan (December 2020), COVID-19's impact on project timeline and workforce
7/28/2020	City of Gilroy	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/28/2020	City of Santa Clara	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/29/2020	Los Banos Unified School District	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/29/2020	Gilroy Unified School District	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/30/2020	Center for Employment Training (CET)	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas

Date	Organization/Individual	Topic
7/30/2020	City of San Jose and San Jose Department of Parks & Recreation	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/30/2020	VTA	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/31/2020	Transbay Joint Powers Authority	Downtown rail extension U-wall conflict with mainline tracks
7/31/2020	Homeless Service Providers	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
7/31/2020	San Jose Unified School District	A 1-hour discussion with potential implementing partners to review and refine their community enhancement ideas and evaluation of the ideas
8/12/2020	San Jose City Councilmember Maya Esparza	San Jose to Merced Project Section Draft EIR/EIS comment period update, Environmental Justice update, Monterey Corridor Working Group
8/19/2020	City/County Staff Coordinating Group	Comment period extension, public hearing
8/27/2020	LPMG	Comment period extension, public hearing
8/27/2020	Silicon Valley Leadership Group CEO Ahmad Thomas	Briefing on the HSR program
8/28/2020	California State Assembly Candidate Alex Lee	Briefing on the HSR program
9/2/2020	DISC Technical Working Group	Walk through of rail alignment at Diridon Station, agency coordination
9/2/2020	CalWORKS Advisory Council	Presentation to share project updates
9/3/2020	Garden Alameda Village Association	Presented on the San Francisco to San Jose Project Section Draft EIR/EIS public review period, and environmental topics as they relate to the community
9/10/2020	Santa Clara Unified School District	Briefing to update the Superintendent on Environmental Justice enhancements process prior to presenting before the Board of Trustees
9/17/2020	Construction Management Association of America NorCal Chapter	Statewide program and Northern California HSR updates
9/22/2020	Hispanic Chamber of Commerce Silicon Valley	Project update and overview of the CWG
9/23/2020	NorCal FRA/Resource Agency Coordination	Update on technical deliverables, Draft EIR/EIS and schedule
9/24/2020	Santa Clara Unified School District Board	Presentation on Northern California project updates and Santa Clara County specific enhancements

Date	Organization/Individual	Topic
9/30/2020	Northern California Legislative Briefing	Statewide program updates, the 2020 Sustainability Report, and updates on the Northern California Region
10/14/2020	NorCal Resource Agency Coordination	Update on technical deliverables, Draft EIR/EIS and schedule and San Jose to Merced Project Section Revised/Supplemental Draft EIR/EIS overview and schedule
10/14/2020	American Society of Civil Engineers-Golden Gate Branch	Project overview presentation
10/14/2020	Stanford University	Class lecture on key decisions taken over last 30 years with California HSR, challenges, and what comes next
10/20/2020	Congressman Josh Harder	Briefing to share project updates
10/29/2020	San Jose State University Institute of Transportation Engineers	Presentation to students on the Program and engineering topics
11/4/2020	SPUR San Jose	Briefing to share project updates
11/5/2020	San Jose City Councilmember Raul Peralez	Briefing to share project updates
11/11/2020	Hispanic Chamber of Commerce Silicon Valley	Project update to the Board
11/18/2020	Northern California Resource Agency	Meeting to discuss technical deliverables and the Cooperating and Responsible Agency Review Kickoff for the San Jose to Merced Project Section Revised/Supplemental Draft EIR/EIS
11/18/2020	City/County Staff Coordinating Group	Presentation on outreach survey and international blended systems
11/18/2020	CWG Webinar	Meeting to share project updates, the 2020 Sustainability Report, the Early Train Operators survey primary research, international examples of blended service operations and the results of the Northern California Outreach Survey
11/19/2020	LPMG	Presentation on outreach survey and international blended systems
12/17/2020	Northern California Legislative Briefing	Presentation on 2020 Business Plan, new administration, construction progress, and end of year review

Date	Organization/Individual	Topic
1/5/2021	VTA	Meeting to discuss VTA's plans to develop a transit-oriented development, the Authority's request to match grant funding for the Station Area Plan and ROW needs
1/13/2021	San Jose Councilmember Sergio Jimenez	Briefing to share project updates
1/20/2021	City/County Staff Coordinating Group	Verbal update provided on project updates
1/22/2021	Briefing with State Senator Dave Cortese	Briefing to share project updates
1/28/2021	LPMG	Verbal update on construction and Draft 2020 Business Plan
1/28/2021	San Jose Councilmember Dev Davis	Project update and overview of the Draft 2020 Business Plan
2/8/2021	Valley Christian High School	Presentation on project and NorCal updates and I Will Ride
2/11/2021	Mineta Transportation Institute Student Association	Presentation on project and NorCal updates and I Will Ride
2/17/2021	City/County Staff Coordinating Group	Verbal update on the Draft 2020 Business Plan update, San Jose to Merced Project Section Revised/Supplemental Draft EIR/EIS, and Final EIR/EIS & ROD Schedule
2/18/2021	Gilroy City Councilmembers Armendariz and Hilton	Project update and overview of the Draft 2020 Business Plan
2/24/2021	Sierra Club Conservation Committee Presentation	Presentation on sustainability and Envision Award
2/24/2021	NorCal Legislative Briefing	Presentation on the Draft 2020 Business Plan, San Jose to Merced Project Section Revised/Supplemental Draft EIR/EIS, Final EIR/EIS ROD schedule
2/24/2021	California High-Speed Rail Authority NorCal Resource Agency Coordination	Presentation on program updates and briefing on the San Jose to Merced Project Section Revised/Supplemental Draft EIR/EIS
2/24/2021	Gilroy Mayor Blankley and City Administrator Forbis	Project update and overview of the Draft 2020 Business Plan
2/25/2021	LPMG	Verbal update on the Draft 2020 Business Plan, San Jose to Merced Project Section Revised/Supplemental Draft EIR/EIS, Final EIR/EIS ROD schedule.
2/25/2021	TWG Webinar	Presentation on the Draft 2020 Business Plan and Funding 101
2/26/2021	JPA Board	Presentation on the Draft 2020 Business Plan
3/1/2021	City of San Jose Transportation and Environment Committee	Presentation on the Draft 2020 Business Plan
3/2/2021	SPUR HSR Lunchtime Forum	Presentation on the Draft 2020 Business Plan
3/3/2021	CWG Webinar	Presentation on the Draft 2020 Business Plan and Funding 101

Date	Organization/Individual	Topic
3/9/2021	San Mateo County Economic Development Association HLUT Committee	Revised Draft 2020 Business Plan
3/10/2021	Mobility Partnership	Presentation on the environmental process and revised Draft 2020 Business Plan
3/17/2021	City/County Staff Coordinating Group	Verbal update provided on project updates
3/24/2021	NorCal Resource Agency Coordination	Presentation on San Francisco to San Jose Project Section and San Jose to Merced Project Section updates
3/25/2021	Independence High School/Engineering Academy	Presentation geared to engineering pathway freshmen at Independence High School on project overview, sustainability, operations, engineering and careers
3/25/2021	LPMG	Verbal update provided on project updates
3/30/2021	Silicon Valley Leadership Group	Presentation to provide project updates and to discuss the Revised/Supplemental Draft EIR/EIS
3/30/2021	VTA, SamTrans, and TAMC	Gilroy Station Area coordination
4/1/2021	Pat Mapelli, Granite Rock	Project update
4/8/2021	Grasslands Ecological Area stakeholders: USFWS, Audubon Society, Ducks Unlimited, Point Blue, Grassland Water District, CDFW, California Waterfowl Associates	Presentation to provide project updates and to discuss the Revised/Supplemental Draft EIR/EIS
4/9/2021	Santa Clara Valley wildlife stakeholders	Presentation to provide project updates and to discuss the Revised/Supplemental Draft EIR/EIS
4/14/2021	Diridon Station Leadership Team	Briefing to provide project updates and to discuss the Revised/Supplemental Draft EIR/EIS
4/14/2021	San Jose Mayor Liccardo	HSR Regional Advocacy
4/20/2021	Pacheco Pass Stakeholder	Discussion of wildlife crossings in Pacheco Pass/Coyote Valley
4/21/2021	City/County Staff Coordinating Group	Update on Revised/Supplemental Draft EIR/EIS and Business Plan
4/22/2021	Gilroy Chamber of Commerce	Project updates and discussion with Mark Turner
4/22/2021	LPMG	Update on Revised/Supplemental Draft EIR/EIS and Business Plan
4/22/2021	USFWS	Bird Electrocution Avoidance Plan presentation
4/23/2021	Caltrans	Briefing on upcoming Revised/Supplemental Draft EIR/EIS publication
4/26/2021	Mineta Transportation Institute program - Lorin Eden Elementary	Presentation to K-3 students on HSR Program
5/5/2021	Pacheco Pass wildlife stakeholders	Discussion of wildlife crossings in Pacheco Pass/Coyote Valley
5/20/2021	Pacheco Pass wildlife stakeholders	Discussion on coordination of wildlife group work and HSR in Pacheco Pass
5/26/2021	NorCal Legislative Briefing	Presentation on project updates, legislative updates (hearings, May Revise/Prop 1A) and federal updates (American Jobs Plan, letters)
5/27/2021	Santa Clara County Parks	Discussion of Section 4(f) de minimis impacts and temporary occupancy exceptions on Santa Clara County parks

Date	Organization/Individual	Topic
6/3/2021	Lorin Eden Elementary School, 4th-6th Graders	Presentation on the Statewide and Northern California HSR Program
06/16/21	City/County Staff Coordinating Group	USDOT Agreement
06/16/21	USFWS	Coordination of USFWS biological opinion
6/23/2021	Salesforce Transit Center Virtual Town Hall	Prerecorded Walking Tour for Q&A Townhall
6/24/2021	LPMG	USDOT Agreement & San Jose to Merced Project Section recirculation
6/30/2021	City of Morgan Hill	Traffic mitigation
7/2/2021	Pacheco Pass wildlife stakeholders	Discussion of potential mitigation or design features to support wildlife movement in Pacheco Pass
7/7/2021	Caltrans	Briefed Caltrans staff on San Jose to Merced Project Section Administrative Final EIR/EIS
7/7/2021	Congresswoman Zoe Lofgren's staff	Project updates and discussion
7/7/2021	San Jose Mayor Liccardo	HSR Regional Advocacy
7/7/2021	VTA/BART	Project coordination
7/8/2021	City of San Jose	Traffic mitigation
7/8/2021	Grasslands Water District	Discussion on Grasslands Water District topics
7/8/2021	Traffic Mitigation Meetings with the City of Gilroy	Traffic mitigation
7/9/2021	Traffic Mitigation Meeting with the County of Santa Clara	Traffic mitigation
7/13/2021	City of San Jose Parks	Discussion of Section 4(f) de minimis impacts in City of San Jose
7/19/2021	San Francisco International Airport	Project briefing with Christopher DiPrima
7/21/2021	City/County Staff Coordinating Group	San Francisco to San Jose Project Section recirculation, Congressional call for dedicated HSR Funding and Bakersfield to Palmdale Final EIR/EIS
7/22/2021	Bay Area Summer Academy	Project overview, Engineering as a career presentation
7/22/2021	LPMG	San Francisco to San Jose Project Section recirculation, Congressional call for dedicated HSR Funding and Bakersfield to Palmdale Final EIR/EIS
7/26/2021	Pat Mapelli, Granite Rock	Project update
7/27/2021	TransForm	Project briefing with Darnell Grisby
7/29/2021	SPUR San Jose	Project briefing with Fred Buzo
8/2/2021	City of Morgan Hill	Traffic mitigation
8/3/2021	SPUR San Jose	Project briefing with Fred Buzo
8/4/2021	Mineta Transportation Institute	Presentation on statewide program and Project Section updates
8/18/2021	Caltrain Citizens Advisory Committee	Statewide and NorCal update
8/18/2021	Center for Biological Diversity	Wildlife connectivity and mitigation measures in San Jose to Merced Project Section
8/18/2021	City/County Staff Coordinating Group	Statewide Update, Revised/Supplemental Draft EIR/EIS, Milbrae Outreach Updates
8/25/2021	NorCal Resources Agency Coordination	Project section updates
8/25/2021	San Jose Councilmember Maya Esparza	Quarterly project check-in

Date	Organization/Individual	Topic
8/26/2021	LPMG	Millbrae meeting brief overview, comment period update, photos from tabling, August construction update, Bakersfield to Palmdale Project Section Final EIR/EIS
9/7/2021	City of Morgan Hill	Phase 3 Outreach Environmental Justice Update
